2.1 No one would question the fact that the Union has been heavily favoured in the distribution of legislative powers, between the Centre and the States. There is therefore demands by some that there has to be a total review of these legislative powers. The concurrent list is cited as an area of occasional friction between the Union and the States. There is also a lurking fear that the Union encroaches upon the state legislative field on the plea of National or public interest. In particular the concurrent list needs to be reviewed. What is required is a liberal approach in giving assent to State legislation.

2.2 It would be desirable that in the interest of the unity and integrity of the country a review is made in the scheme of distribution of subjects mentioned in the three lists of the Seventh Schedule. Also Articles 200 & 201 call for review in view of experiences of some states in the country.

2.3 It is in the interest of ensuring better relations between the Union and the States that the Central Government consults the state governments before hand while undertaking legislation of a subject in the concurrent list. There should be such a provision in the Constitution.

2.4 The Union Government's power to legislate on any subject within the exclusive competence of the states in 'National Interest' or 'public interest' should not be of a perpetual nature. A time limit has to be fixed.

2.5 There are no further suggestions with regard to Union-State relations in the legislative sphere.

PART III

ROLE OF THE GOVERNOR

3.1 The role of the Governor in the context of Centre-State relations needs to be reviewed thoroughly. It is true that some governors have acted with utmost impartiality but there were also some Governors whose actions have not been quite in keeping with the spirit of the Constitution. Hence, there have been instances of the abuse of powers by Governors. Sikkim had a bitter experience of it in May, 1984. Such instances are not conducive to the existance of better Centre-State relations. Hence the case for a review.

3.3 These (a), (b) and (c) deal with matters of vital importance to the State. While making report to the President under Article 356 (I) the Governor has to be very objective and has to act independently. The Governor should appoint only that person as a Chief Minister who commands majority in the Legislative Assembly. There should be no two opinions about it. In a situation where no party commands majority of seats, the Governor should ask the leader of that party which has the largest numbers of members to form the Government. The State Assembly must be convened within a fortnight of the appointment of the Chief Minister.

The words, pleasure of the Governor should mean the ministry remaining in office with sull confidence of the legislative assembly. The pleasure of the Governor should not be allowed to be misused so as to enable the Governor to act according to his likes and dislikes.

Regarding Article 174 (2) the Governor should be guided by the advice of the Chief Minister.

3.4 These Articles give discretionary power to the Governor and unfortunately some of the Governors have not used these powers independently and objectively. There must be a time limit for the Governors and the President to make up their minds under Article 200 and Article 201 respectively.

Ordinarily bills passed by the Legislative Assembly must be given assent to by the Governor.

3.5 The case study conducted under the auspices of the Indian Law Institute is really revealing and disturbing. This process needs to be checked. A time limit should be there within which the process of consideration of and assent to should be completed.

3.6 As mentioned earlier some of the Governors have not acted impartially and fairly in accordance with the spirit of the Constitution. For them the question of establishing healthy conventions does not arise. Indeed thay have gone against the very principles of constitutional democracy. Sikkim is one of the glowing examples of such acts of omission and commission on the part of the Governor in May, 1984.

3.7 The tenure question is not that relevant. The procedure for his removal should be the same as prescribed in the case of the Judge of the Supreme Court/High Court.

3.8 This suggestion cannot be accepted. The Assembly has to be summoned only on the advice of the Chief Minister.

3.9 The procedure postulated in the Constitution of the Federal Republic of Germany is not suitable for us. In a democracy what is important is the quality of a person who holds the high office of the Governor.

3.10 Going by the actions of some of the Governors in dealing with such important matters coming within his perview one is inclined to accept the recommendations of the Administrative Reforms Commission.

PART IV

ADMINISTRATIVE RELATIONS

4.1 It is evident that the provision of these Articles are there to make the Centre strong and powerful so as to deal with situations that may affect the unity and integrity of the country. However, it must also be said that these are sweeping powers and the State are helpless in such situation. Hence it is imperative that these sweeping powers should be used if need be with utmost thought and consideration and after exhausting all other available methods. How about placing such matters before the Inter-State Council for its views ?

4.2 The deletion of Article 365 is not favoured. It is no doubt a consequential enabling clause which provides a sanction. However, it would be advisable that action under this Article is undertaken after receiving the view of the Inter-State Council.

4.3 One would agree with the observation made by the Administrative Reforms Commission. At the same time it would be advisable that the action be taken only after the receipt of the views of the Inter-State Council.

4.4 So long the Chief Minister enjoys majority in the legislative assembly the Governor should not recommend imposition of President's rule. This also holds good in cases where the Chief Minister is prepared to demonstrate his majority by facing the assembly at a short notice. Unfortunately there are cases where the Governor has abused his power and recommended President's rule thereby cutting at the very root of constitutional and democratic norms. Sikkim provides an example where the Chief Minister Shri N. B. Bhandari was dismissed even though he had the majority in the House and was prepared to demonstrate it on the floor of the House even within 24 hours. The Constitution needs to be amended so that there is no such abuse of power under any circumstances.

4.5 In view of the situations as mentioned in the question and in order to deal with them democratically and in the spirit of objectivity it would be advisable that the President refers the matter to the opinion of the Inter-State Council before formulising the opinion.

4.6 The present arrangements may continue as they have been working satisfactorily.

4.7 The need for review of the working of these agencies has been felt as there have been inroads in the domain of the state thereby impeding the pace of development. It has been keenly felt that some of their functionigs should be vested in the State Governments.

4.8 By and large the All India Services have fulfilled the expectations of the Constitution makers. However, it has to be ensured that officers of these services, while serving in the state, must be under the supervision of the concerned State Government.

4.9 As a general policy, concurrence of the State Government must be there before the use of Central force in the State. Only in cases of extreme situation, the Union Government can take *suo motu* decision.

4.10 One would agree with the view that Broadcasting should continue to remain in the Union list but as was suggested the broadcasting and television facilities should be shared between the Union and the States on a fair basis, giving equal importance to the social, economic and cultural ethos of the people of each state. The present situation of heavily loaded news cast in favour of some states must go and equal importance needs to be given to news from other regions of the country as well.

4.11 It will be useful if Zonal Councils meet frequently.

4.12 As things stand today, an Inter-State Council should be established as such a body will be desirable to iron out Inter-State and Union-State differences.

About its functions and composition, it can be worked out later after discussions between the Union and the States.

PART V

FINANCIAL RELATIONS

5.1 By and large the scheme of devolution envisaged by the Constitution-makers has worked well. However, the need for small and backward state like Sikkim and other North-Eastern States has to be considered in proper prospective. While some big States are becoming richer because of their resource mobilisation potential, these backward States sorely lack that potential. Unless the Centre comes to the aid of these States in a big way it will be impossible for them to make progress. Hence, this aspect of the situation has to be borne in mind in the process of devolution.

It will be in the fitness of things that Finance Commission must give greater weightage to backward States in the distribution of financial resources.

5.2 The observation of ARC Study Team on Centre-State Relation would continue to hold good as dependance of States on the Union continues to increase. It is necessary to bring Corporation Tax, Custom Duty and Surcharge on Income Tax into the sharable pool but at the sametime backward States should not be discriminated while sharing. The need for fiscal discipline both by the Centre and the States cannot be over emphasised.

5.3 We fully agree with the above observations and also with the view that regional balance can be reduced by a strong Centre having elastic sources of revenue. It must have discretionary powers to use funds available with it for the development of poorer States.

Only then the Centre can fulfill its obligations and responsibilities as mentioned in the Directive Principles of State Policy. Otherwise, the rich States will become richer and the poor States poorer.

5.4 There is no doubt that richer State shave to contribute to the Central pool through subvention. There is also no doubt that there is absolute need to have better control over expenditure.

Deficite financing has to be resorted to when it is a must in the interest of developing economy.

5.5 Whereas the Finance Commission assesses the resources and requirement of funds on the non-plan side the Planning Commission assess the developmental needs of the states. Both these bodies have to be more objective while assessing the needs of backward and poor States. The growing expectations of the people of backward states have to be given due consideration so that with adequate assistance from both these bodies, these States can accelerate their pace of development to catch up with the rest of the States, It is clear that the pattern of devolution of financial resources has not been equitable.

5.6 What is needed is streamling the process of resource sharing based on equality and justice. Creation of a special Federal Fund does not deserve consideration.

5.7 The existing arrangement does not call for any change.

5.8 It will be difficult to agree to the views expressed in the question. If any tax raising powers are denied to the states, what will be left for the states ? The whole basic structure of political entity will be affected to the detriment of the prerogatives of the state in this sphere. This will mean absolute dependence of the States on the Centre which will be very harmful to the States.

5.9 As things stand today, the roles of Planning Commission and Finance Commission are complementary. No doubt the suggestion for a Permanent Finance Commission to undertake the dual role of fiscal transfers deserves consideration. It is known that some States are not happy with the views of various

Finance Commissions. Also some States have opined that the Planning Commission has not been fair to them. Under the circumstances the constitution of one Body has some merit. In the ultimate analysis it will be beneficial if these two bodies and the states make their assessments objectively and fairly.

5.10 In can be said that the existing arrangements have to some extent helped in narrowing down the disparities. It seems the statutory and discretionary transfers have promoted efficiency and economy in expenditure. There is however always room for more efficiency and economy.

5.11 We are in agreement with the views expressed in the question. Financial discipline is a must. All progressive schemes have to be implemented within the available financial resources. At the same time, it is to be ensured that the pattern of allocation between the Centre and the State has to be in such a way as to give greater assistance to backward states so as to help them to accelerate their pace of development. Care also should be taken that these states do not indulge in financial indiscipline.

5.12 Tax sharing should be such so as not to put small and backward states in a difficult situation. For such states grants-in-aid has an important role.

5.13 We would agree with the principles laid down for grants-in-aid under Article 275. However, it is to be ensured that all aspects of economic and social disparities are taken into account so that there is no scope for any allegation of discrimination. Some of the states particularly small and backward states have problems, which though seem to be regional, have national contents and these have to be taken care of under the principles.

5.14 There is reasonableness in the suggestions that yield from the Special Bearer Bonds Scheme and the revenue from raising administered prices of items should be brought with in the divisible pool of resources. If these were done, the financial resources of the states would have been further augmented to enable them to give more thrust to implement some pressing progressive schemes. Some states are of the view that all revenues raised by the Centre should be shared with the states. Although we would not fully subscribe to this view, we would like to say that interest of states should be uppermost in the minds of the Centre in the sphere of resource sharing.

5.15 There should be equitable and rational criteria in the distribution of savings available in the community. The savings belong to the country as a whole and as such the share of states in the sharing should not be guided only by area, population and resource mobilisation potential. Otherwise small states like Sikkim will be in a terrific disadvantage.

5.16 We are aware of the responsibilities of the state and we are equally aware that the responsibilities are increasing. The Centre should also realise that in a democratic socialist country, the responsibilities of the state are always on the increase as they have to undertake various welfare measures for the well being of the society. Hence this aspects also needs to be considered. Also in times of certain conditions like inflation or say natural calamities it will be difficult for the states to do the job within its financial resources. Consequently deficits do arise but that should not be advanced as an argument for indulging in financial indiscipline resulting to large extent in fiscal imbalance.

5.17 We are in full agreement that a periodical review of the problem of growing indebtedness of the states is absolutely necessary. Perhaps it would be worthwhile to constitute an independent body to look into this matter indepth.

5.18 Sikkim being a small state and its borrowing capacity being negligible we can only suggest that the state should not exceed the limit of sound finance.

5.19 We are of the opinion that on foreign borrowings the Centre should not charge from the state a higher rate of interest than what it pays to the foreign lender. We are also of the opinion that project-tied external aid should be passed on to the states. Indeed it would be worthwhile to make a review of the entire present arrangement.

5.20 In view of the different approaches of various states in this matter it would be desirable to have loan councils, keeping in view the country's condition. There will be no justification to copy loan council as it exits in Australia. The Reserve Bank of India should be given more freedom in its functioning to fully meet its obligations and responsibilities.

5.21 It is true that even after doubling the entitlement of Ways and Means, there is continued existance of large overdrafts. Under exceptional circumstances which cannot be foreseen at the time of budget preparation, the resort to over-draft has to be undertaken to meet those circumstances. One can cite the instance of additional D. A. The Centre therefore has to consider these circumstances. The need for periodic revision of the ways and means limits can thus be stressed. However, it should also be under stood that over-drafts should not go beyond reasonable limit.

5.22 The answer to the question is Yes and No. It may be true in respect to some states that they are not exploiting adequately their own source of revenue. Some others are exploiting to the extent possible. There are also cases where the state possesses the potential for raising resources but the Centre takes its own time in giving clearance to related schemes. Sometimes such schemes are not cleared. Hence despite having the desire to exploit adequately the source of revenue yet they are not in a position to act on it. If it is found that states have not taken recourse to additional resource mobilisation although they have the potential to do so, the Centre through Finance Commission should take action against such states.

5.23 There is tremendous scope for improvement in the performance of public sector undertakings as the public sector has so far not yielded the expected returns on capital-investment.

About substantial leakage in Central taxation, the Central authorities should take adequate precautions to close those leakages.

5.24 It will definitely be a healthy convention if the suggestion is given effect to. In such a situation there will be more mutual trust and confidence between the Centre and the State.

5.25 We agree with the suggestion that Article 269 should be better exploited to augment the resources of the States.

5.26 It is obvious that had the tax continued to operate the revenue on the basis of the greatly increased current passenger fare earnings of Railways would have been much higher. On the basis of equity and justice the grant in lieu of the passenger fare tax should be revised and enhanced.

5.27 The Union Territories come under special category. Hence there are no comments from outside.

5.28 It is a fact that this is one of the areas in which states have been experiencing great difficulty. In our state of Sikkim every year there are national calaimties in the form landslides and hailstorms. Such calamities should be treated as national problem and the Centre must come forward with adequate funds to deal with such situations. The formula suggested by the Seventh Finance Commission seems to be inadequate. It is also necessary that Central officials must visit the areas to ensure that relief assistance is utilised properly and effectively.

5.29 We have no objection to the setting up of National Loan Corporation, National Credit Council and National Economic Council.

5.30 We fully agree that the funds are spent prudently and that the benefits go back largely to the people. At the same time collection of funds and their distribution are also important matters that need consideration.

5.31 (a) We agree that periodical assessment of expenditure of the Union is necessary. Such an exercise will satisfy everyone. We are also in full agreement with the view that additional resources should be found for helping the states, particularly the poorer ones.

(b) What is needed is strict financial discipline. Those states which indulging financial indiscipline despite repeated requests should not be bailed out by the Centre.

(c) We are not in favour of a permanent National Expenditure Commission. We believe that both the Centre and the State have the capacity to discharge their responsibilities to the satisfaction of the people.

5.32 The present system should cotinue.

5.33 It is desirable to have a beginning in evaluation audit.

5.34 We believe that Parliament has conferred sufficient powers and joined adequate duties on the Comptroller and Auditor General to enable him to keep an effective watch on the expenditure of the Union and the States.

5.35 We are satisfied that the reports of the Comptroller and Auditor General are comprehensive and reasonably accurate. At the same time we feel that if need be some powers may be given to him to enlighten the public on the pattern of and trends in public expenditure.

5.36 We have already expressed our views in reply to question 5.35.

5.37 The existing arrangements may continue.

5.38 We are of the view that an expenditure Commission is not needed.

5.39 We fully agree with the view that there should be monitoring of accounts of utilisation after the expenditure has been made. At the same time in some cases there has been considerable delay in the clearance of the plans of action formulated by the states from the ministry concerned. Such undue delay which comes as an irritant must be avoided.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 The shortcomings in planning relationship as indicated are more or less valid. We are of the firm opinion that the State Governments must be fully involved in the planning process within the parameter of national priorities to be laid down by the Centre. In this vital sector of planning the Centre and the States have complementary role to play. That the National Development Council should be made more active hardly needs any over emphasis. At the same time full freedom should be given to the states to formulate their own plans suited to their local conditions and ethos.

6.2 We agree with the view that the National Development Council should be set up on a statutory basis. The recommendations of the Planning Commission must get approval of this council. We have expressed our views earlier also that State should be fully involved in the planning process and that fruitful result would come only if there is decentralisation in planning.

6.3 As we believe in decentralisation in Planning, we are not happy with the present composition of the Planning Commission. The states should have full freedom to formulate their own plans within the parameter of national priorities.

6.4 We endorse the view that the Planning Commission should be a high grade advisory body of economists, technologists and management experts. We are also in agreement with the suggestion that the commission should be an independent body free from all pressures of the Union Government.

6.5 It may continue to offer advise in the formulation of Centre & State plans and also in respect of investment.

6.6 It looks reasonable to incorporate national priorities in the State Plans. This would help the state to prepare their own plans according to the requirements keeping in view the national priorities. Thus there is no need for minute scrutiny by the commission of state schemes.

6.7 The main task of the Planning Commission should be confined to plan formulation. The terms of assistance to the state needs to be liberalised. The Planning Commission would be free to advice on resource raising.

6.8 & 6.9 It would be fair if the formulation of plan size is left to individual state after the determination of Central assistance. The present system of determining special central assistance for tribal and Hill Area sub plans is by and large reasonable. More weightage should be given to the present system of allocation of Central assistance in respect to backward states if there has to be balanced regional development.

The criteria evolved by the National Devt. Council for allocating Central plan assistance to the states are by and large reasonable. We are of the view that of the four factors that are taken into account for allocation of Central assistance, backwardness of the state should be given and added consideration. Although the Gadgil formula relates to only small portion of the plan assistance to the states, it can be said in fairness that its subsequent revisions are moving towards equitable distribution.

6.10 We believe that Centrally Sponsored Schemes are necessary particularly to backward and poor states. At the same time it is necessary that the states should be associated in the formulation of such schemes. Only then these schemes can take into account conditions of states and this will help in their effective implementation.

6.11 It is true that there is need to strengthen the system of monitoring and evaluation at both the Union and the State levels. To achieve this it is desirable that the Central Government provides the necessary guidance and the financial assistance to the State Government.

6.12 If planning is to be successful it is absolutely necessary that it is decentralised right up to the village level. We fully agree with the view that decentralised planning would help in introducing a spirit of "Co-operative federalism" in our planning system.

6.13 State Planning Boards have an important advisory role to play in the whole planning and development process in states. Unless there is decentralisation, the State Planning Boards will not be in a position to play its fruitful role.

PART VII

MISCELLANEOUS

7.1 We are in agreement that the extension of the First Schedule to cover a very high proportion of industries in terms of value of their output has gone against the interests of the States. One can imagine the situation in which States are placed if they have to run to the Centre for a licence to start a soap factory. One can understand that in respect of core industries or industries related to defence purposes or where massive investment is needed, the Centre's jurisdiction to issue licences is quite understandable. Unfortunately a large number of consumer items as mentioned in the above question are union subjects. Such Industries should be transferred to the State jurisdiction.

7.2 Within the parameters of national public interest, defence industries and core industries and also such other industries, where investments are beyond the financial capability of the State Government should be included. The Union Government at the same time should have confidence in the States. It is therefore felt that a large number of items in the First Schedule to the (Development and Regulation) Act, 1951 can be shifted to the States jurisdiction.

1. **Metallugrical Industries :**
   - (i) Iron and steel structurals
   - (ii) Iron and steel pipes
   - (iii) Other products of iron and steel
   - (iv) Iron and Steel castings and forgings
2. **Electrical Equipment :**
   - (i) Electrical motors
   - (ii) Electrical fans
   - (iii) Electrical lamps
   - (iv) X-ray equipment
   - (v) Electronic equipment
   - (vi) Household appliances such as electric irons, heaters the like
   - (vii) Storage batteries
   - (viii) Dry cells
3. **Telecommunication :**
   - (i) Radio receivers, including amplifying and public address equipment
   - (ii) Television sets
4. **Transportation :**
   - (i) Motor cycles, scooters and the like
   - (ii) Bicycles
   - (iii) Others such as fork lift trucks and the like
5. **Agricultural Machinery :**
   - (i) Agricultural implements
6. **Miscellaneous, Mechanical and Engineering Industries :**
   - (i) Plastic moulded goods
   - (ii) Hand tools, small tools and the like
   - (iii) Razor blades
   - (iv) Pressure Cookers
   - (v) Cutlery
   - (vi) Steel furniture.
7. **Commercial, Office and Household Equipment :**
   - (i) Typewriters
   - (ii) Calculating machines
   - (iii) Vacuum cleaners
   - (iv) Sewing and knitting machines
   - (v) Hurricane lanterns
8. **Medical and Surgical Appliances :**
   - (i) Surgical instruments sterilisers, incubators and the like

9. Mathematical, Surveying and Drawing Instruments:

(i) Methamatical, surveying and drawing instruments

10. Fertilisers :

(i) Mixed fertilisers

11. Chemicals (other than Fertilisers) :

(i) Paints, varnishes and enamels

12. Paper and pulp including paper products :

(i) Paper for packaging (corrugated paper, craft paper, paper bags, paper containers and the like)

(ii) Pulp-wood pulp, mechanical, chemical, including dissolving pulp.

13. Soaps, Cosmetics and Toilet Preparations :

(i) Soaps

(ii) Cosmetics

(iii) Perfumery

(iv) Toilet preparations

14. Rubber goods :

(i) Tyres and tubes

(ii) Surgical and medical products, including prophylactics

(iii) Footwear

15. Leather, Leather Goods and Pickers :

(i) Leather, Leather goods and pickers

16. Glass :

(i) Hollow ware

(ii) Sheet and plate glass

(iii) Optical glass

(iv) Laboratory ware

(v) Glass wool

(vi) Miscellaneous ware.

17. Timber Products :

(i) Plywood

(ii) Hardboard, including fibre-board, chip board and the like

(iii) Matches

(iv) Miscellaneous (furniture components, bobins, shuttles and the like)

18. Food Processing Industries :

(i) Canned fruits and fruit products

(ii) Milk foods

(iii) Malted foods

(iv) Flour

(v) Other processed foods.

7.3 It would be good if Regional Boards are set up to process the request from the State for the import of Capital goods. These Regional Boards however, have to work within the broad guideline of the Centre. Once projects are cleared, allocation of raw materials or matters relating to capital issues should follow automatically.

7.4 There is need to have appropriate planning before hand for the allocation of raw materials. This aspect needs to be streamlined. As things stand today there is ample scope for improvement by bringing out more coordination between various institutions and greater financial support. There is also the need for decentralising the structure of planning to serve the desired objectives.

7.5 Sikkim is the smallest State in the country and its resource generating capacity is insignificant. State plan are financed from the Centre. Therefore, the implementation of the State plans has to be within the centre's allocation. As there are no Public Sectors Industries in the State worth mentioning the question of securing loans from Industrial Development Bank or Industrial Finance Corporation or other Centrally controlled financial Institutions has not arisen.

7.6 Hardly there are any Public Sector Industries in Sikkim. Therefore thequestion mentioned above has only academic interest so far as this State is concerned.

7.7 So far as Heavy Industries are concerned, Sikkim is out of the picture. As a matter of fact Sikkim wishes very much to have Industries, heavy or medium in public or private sector in the State of exploit its potential. So long such industries are not there, the question is irrelevant.

7.8 It is true that Sikkim has been identified as industrially backward State. But unfortunately the Centre has not come forward to set up industries in the State to remove its backwardness. The State has very limited resources to go in for setting up of industries on its own. This can alone be done with the Centre's assistance which unfortunately is not forthcoming. The result is there are hardly any industrial units worth mentioning. What is more important is development cf infrastructure to attract entrepreneurs from outside. Unless there is investment, either from the public or private it will be very difficult for Sikkim to go in for industrialisation alone.

Trade and Commerce

8.1 The general policy should be that there is no restriction on intra-state trade or commerce. It would be better if there is an authority to look into the matters as enumerated in the question above for better Centre-State relationship in trade and commerce.

Agriculture

9.1 Though agriculture is a State subject, the Centre must play its role of involvement in the development of agriculture particularly in backward State like Sikkim. The present arrangement of supply of fertilisers, pesticides and other agriculture inputs should continue. Also the benefits of centre agricultural research activities continued to be given to the States.

As things stand today the position mentioned in the question has not substantially changed since 1967.

9.2 We do not agree with the recommendation of the National Commission on Agriculture that Centrally and Centrally sponsored being implemented through the State agency form part of the State Sector and that their number should be kept to the minimum. For a backward State like Sikkim whose

resource generating capacity is insignificant the continuance of such centrally sponsored scheme is a must as they play a vital role in the economic development of the State. The only thing needed is that the State Governments should be actively associated in the formulation of such schemes. Also there should be flexibility given to the States for implementation. The Centre should give only broad guidelines to the State Governments.

9.3 We do not see the use of such joint Working Groups as mentioned in the question. Even if they are set up their roles should be confined to giving recommendations only. Till now, we have had good cooperation between the Centre and the State Governments. As already stated the State should be closely associated in the formulation of the scheme and that they must have a say in the flexibility of their approach regarding implementation of Centrally sponsored schemes.

9.4 In view of the vastness of the country, and diverse agro-climatic condition coupled with production cost and productivity level etc. it is not rational to have a uniform support prices or procurement prices for different commodities for the country as a whole. Hence the State should be given better flexibility in fixing farm prices for different areas of the country.

So far as irrigation is concerned, Sikkim does not have irrigation system to the level of attracting the attention of the centre. We have only very minor irrigation system.

So far as credit is concerned, the National Financial Institution must provide credit for the implementation of agricultural programmes in the State. Towards that end, the general guidelines must come from the Centre.

The supply to strategic inputs like fertilisers and pesticides is of vital importance to all States in the country.

The present forestry policy needs to be reviewed. It is imperative to give wide latitude to State Government in the administration of forest within the national guidelines. At present the State Government are required to refer even small matters regarding forestry to the Centre and this delays the implementation of various projects.

9.5 We are in favour of a broad policy guidelines in the working of institutions like the National Bank of Agricultural and Rural Development. Within that broad guidelines this financial institution should be allowed to work in the States. It is suggested that the activities of the ICAR should be more extensive and their fruits of research should reach the farms, along with its guidence.

Food & Civil Supplies

10.1 There is greater scope for improving Centre-States liaison in the areas of procurement, pricing, storage, movement and distribution of food grains as well as other essential commodities. There must be prior consultation with State Governments while formulating the policies regarding these matters.

10.2 Periodical review is a must as it is very useful. The present arrangement of prior approval of the Central Government under the essential Commodities Act needs to be thoroughly reviewed.

Education

11.1 We feel that to say there is unnecessary centralisation and standardisation in the field of education amounts to making a sweeping statement which could have been avoided. Atleast our State has had no experience of Centre interference in the initiative and authority of the State Governments. The proposal to bring Education back to the State list calls for a thorough review.

11.2 The question is not applicable to us as the State does not have any University. Also the only one college has not so far received any financial assistance from the University Grants Commission.

11.3 It is essential that there is discussion and consultation in order to evolve a consensus among the States as well as between the Centre and the State in the field of education. The process of discussion, consultation and persuasion should be a constant factor. It is hoped that the new education policy being announced soon will have the imprint of this process.

11.4 We are of the view that Constitutional guarantee given in respect to denominational educational institutions must go. The relevant Articles must be amended to achieve that end. The question arises what for these constitutional guarantees. These are against the very spirit of our secularism. Such guarantee we feel go against the interest of national integration.

11.5 So far as Sikkim is concerned we are not aware of any instances of conflicts on issues between the Centre and the States so far as education is concerned.

12.1 The time has come when there should be a body or a machinery like the inter-state council to deal with irritations and problems which might arise with regard to Centre-State relations.

The recommendations of such a body or an institution would be of great help in improving inter-governmental relations and coordination.

3. REGISTERED PARTIES

JHARKHAND MUKTI MORCHA

REPLIES TO QUESTIONNAIRE

As desired by your office No. 42/2/84-CCSR (Coord) dated 21-11-85. I, as President of Jharkhand Mukti Morcha am sending the party's views in reply to the questionnaire, which runs as follows :—

1. The problem of Centre-State relation has cropped up due to two peculiar situations that have arisen in the Indian Politics after 1967.

1. Rule of different political Parties, one at the centre and the other at the State sometimes

having opposite and conflicting ideologies and programme.

2. Inability of any single political party to have a clear cut majority either in the State or in the centre and failure to stop the process of defection until the last anti-defection bill of 1985 was padded.

3. Both situations have increased the importance of the position of the President and the Governor and enlarged the scope of their discretionary power calling for a redefinition or clear cut demarcation to eliminate possible misgivings or allegations regarding their arbitariness or even motive. As such situation is likely to continue if not aggrevate not so much due to constitutional bottle necks, but due to accentuating social, Political tensions, certain delimintion of the various authorities involving governing the body polity is called for. It is in that consideration some answers to the questionnaire provided by the learned commission are being given though considering the real maladies be-devilling the body politics of the country even giving birth to this commission are lying else where in the very social structure of the country beyond the purview of the Commission.

PART I

1.1 It is not federal, but unitary not with standing unique features found in other unitary states.

1.2 There should be restructuring of the effectiveness of all the articles and justification but not through any amendment and legislation but initiating a national debate for reaching a concensus.

1.3 Yes, but the decentralisation should not itself be between centre and state, but also between district and districts considering the heterogenoity un-even development and multicultural character of the state itself with specific mention of the hilly and tribal area of Bihar now existing a internal colony of both the State and the Centre

1.4 To our knowledge USSR.

1.5 We nearly agree with the view with addition, that major difficulties would not be removed even by changing the executive procedure or even evolving any so called healthy conventions as they are ingrained in this post colonial social structure and its ill advised capitalist mode of development vitiating the very motivation of the society, with suspicion and acquisitiveness.

1.6 We agree, but constitution has failed in the purpose as all the provisions of the directive principle of the States have been violated or rendered dead letter.

1.7 They warrant review and re-examination.

1.8 We support the power under Article 3 but we want to add that this has not been properly utilised for political consideration of the dominating section to ensure development of the culture, language, identity of the oppressed nationalities as that residing in the area called "Jharkhand, Chhatisgarh, Uttarakhand and others in the country creating tensions between nationalities. A provision should be made in article 3 to review with statutory commission need to form any more states in the country, to ensure proper development and the multicoloured characteristics of the country enshrined in the concept of unity in diversity.

PART II

2.1 There are instances of the centre exceeding its provision given by the legislative powers in practice specially in the subject covered by the concurrent list by thrashing of the New education policy, injecting C.R.P. or C.I.S.F. or B.S.F. over the head of the States, changing Chief Ministers as bonded labours, thrusting governors as great Mughals used to depute their protegies to the provinces.

2.2 The legislative list for the centre in the 7th Schedule should be confirmed only to the following:

1. Defence
2. communication
3. currency
4. Foreign affairs
5. Inter State relation
6. Creation of States etc.

2.3 Yes.

2.4 Except in emergency there should be no power with the centre.

2.5 Nothing special.

PART III

3.1 Constitution has failed to envisage clearly the new role of the Governors different from that in the British times and the Governors failed to envisage their roles provided by the constitution thus becoming biggest centre of controversies embittering centre-state relations as the role of Dharmavira., A.P. Sharma in West Bengal, Jagmohan in Kashmir, as also Shankardayal Sharma in Telegu etc.

3.2 The post of Governor should be abolished as they are burden to the State exchequer.

3.3 Answer is unnecessary in view of the above.

3.4 Same.

3.5 We do not agree as the withholding of the assent was more political than legal, the example being the progressive land Reforms Bill passed by the Bengal Assembly seven years back. There should be provision in the constitution setting the time-limit for giving assent to any state bill by the president and showing reason for not giving assent and giving right to states for moving Supreme Court either against the denial or delay in giving such assent.

3.6 Answer unnecessary.

3.7 Same.

3.8 Whether the ruling party in the state has lost its majority in the legislature would be decided only in the Assembly by vote and not by any other agencies.

3.9 It is a worthy suggestion but requiring further study specially in the condition when assembly would express lack of confidence but at the same time unable to choose any successor commanding majority and also unwilling to recommend dissolution.

3.10 Yes.

PART IV

4.1 As per the paper report the Government of West Bengal has refused to enforce the N. S. Act and some other preventive provision passed by the centre, but no knowledge whether there was a threat invoking article 365. However, there are allegations and indications of putting pressure on the State of West Bengal by creating financial difficulties as financing aid was stopped for Haldia project as per the report.

4.2 The Article should be deleted except in Emergency.

4.3 No answer.

4.4 No, As in Kerala in 1959.

4.5 No opinion but special stress should be given on sub-clause (b) of the Election Commission.

4.6 Election be done by Administration of the State to stop both capturing and machination of the local politics.

4.7 No opinion.

4.8 In addition to the All India services already operating there should be All India Judicial services, All India Medical Services, All India Educational Services, All India Engineering Services and there should be law that in all the services including I.A.S. and I.P.S. cent per cent of the persons selected in each State be posted in other states.

4.9 We oppose.

4.10 We support that Broad-casting should be in the concurrent list.

4.11 No purpose served.

4.12 No opinion.

PART V

5.1 No, as the disparity between developed and under-developed states has increased continuously.

5.2 We support the provision (a) as it will decrease the trend of dependence to the centre, make them more responsible and stand on their own leg with their own planning there should be no question of giver and receiver.

5.3 Instead of making centre stronger to extend justice to the less developed regions of the state there should be clear cut division of resources of the States enforced by the centre for its different regions with particular instances to the backward regions.

5.4 No answer needed in view of the above suggestion.

5.5 No comment.

5.6 No comment

5.7 No comment.

5.8 No comment.

5.9 No efficiency in economy in expenditure and disparities instead of getting narrowed down has increased.

5.10 No non-plan expenditure should be covered.

5.11 Spirit of Article 275 has been clearly violated in practice both with respect to Assam and Tribal Areas.

5.12 No comment, but we oppose the special bearer bonds itself as that rewards the owners of black money, on the contrary the states should be asked to the black money which should be totally spent in the states plan.

5.15 No.

5.16 No.

5.17 Mismanagement, corruption, lack of planning and political will of the states run by political party which is also running the centre.

5.18 No.

5.19 No.

5.21 No Comment.

5.22 Yes, finance commission with the help of Planning Commission should suggest to the states the various options of exploiting their own resources each year.

5.23 Yes, A permanent body should be created by the National Development Council to look into the matter and suggest remedy.

5.24 Yes.

5.25 No comment.

5.26 We support the stand of the states the grant in lieu of passenger's fare tax should be enhanced in proportion to the increase in the collection of Railway fare.

5.27 No comment.

5.28 There should be a committee in Parliament to look into the matter and monitor the operation.

5.29 No comment.

5.30 No comment.

5.31 To support the creation of national expenditure commission.

5.32 No comment.

5.33 No comment.

5.34 & 5.35 The report of the Controller and Auditor General should be given more importance and statutory action on its recommendation should be ensured.

5.36 No comment.

5.37 No comment.

5.38 No comment.

5.39 State Government should be authorised to decide the validity of the expenditure under the approved scheme without the intervention of external agencies.

PART VI

6.1 There should be a clear demarcation of the schemes between the centre and the states and there should be standing committee out of National Development Council to coordinate both if required.

6.2 We support it.

6.3 No, there should be sitting of the planning commission in each state within some specified period to deal with the problem of the state.

6.4 No comment.

6.5 No comment.

6.6 There should be clear demarcation of the area of operation of the Planning Commission.

6.7 No comment.

6.8 No comment.

6.9 The present system of allocation of central assistance has failed in attainment of balanced regional development and serve tribal and hill area of subplans.

6.10 No comment.

6.11 A standing committee of National Development Council should watch the implementation of the plans.

6.12 Yes, we support the concept of decentralisation of plans starting from every Panchayats itself reflecting the will and idea of the people.

6.13 State Planning Board should be strengthened and area of working should be so classified so that it does not affect the effectiveness of the National Plan.

PART VII

7.1 Arbitrary extension of list of industry of public interest and National importance has become counter productive.

7.2 Yes, there should be clear cut definition of National importance.

7.3 No comment.

7.4 No comment.

7.5 No comment.

7.6 States should be taken into confidence before deciding on the location of industry.

7.7 Criticism of genuine and corrective steps should be contemplated by the standing committee of the National Development Council.

7.8 No comment, but industries in backward area should be so designed and managed so that it develops the backward people of the backward area without making colony of the forward people of the forward area in the backward regions.

8.1 No comment.

Agriculture

Future of agriculture in India develops more on completing land reforms than on any division of jurisdiction between state and the centre. Land reforms precisely means land to the tillers and cooperative farming there should be a National Commission on land relations to evaluation and direct the process of reform in the country.

Food, Civil Supplies

Trade of all essentially commodities should be nationalised and the centre and the state should have concurrent power of Nationalising and operating them.

Education

In India, there is no education imparted through mother tongue specially in Jharkhand where education should be imparted through mother tongue and not through Hindi. In India, what to speak of provincial services even in IAS and IPS services politics plays the important role of selection. All sorts of norms have broken and there is chaos and anarchy in educational system.

12.1 No comment.

THE NAGALAND PEOPLE PARTY

MEMORANDUM

INTRODUCTORY

1. Nagaland is one of the smallest states in India, with the present geographical area of 16,579 Sq. Kms. having density of population in the region of 35 persons to a square kilometre, comprising about 20 tribes with varied customs and traditions and dialects. There are about 1,160 odd villages situating in the ill-communicated remote areas. Though there is difference in the needs of the plains and the hills, even as a Hill State, the State of Nagaland can be singled out as very peculi r from other hill states. As a matter of fact, because of its peculiarities, Nagaland was granted the statehood inspite of its size in population and area. The other smaller states attained statehood because of Nagaland. If Nagaland had peculiar socio-economic conditions at the time of granting statehood, those have not disappeared today, rather the conditions have further aggravated with the inception of the statehood, of ten times, it has

been found out that the yardsticks applicable elsewhere in the country could not be applied in Nagaland. Hence, Nagaland should be treated as a class of its own while considering the Centre-State relations.

If the Constitution of India is to be considered as Quasi-federal the composition of Parliament should bear the semblance of federal system. The Constitution as of now does not reflect any semblance of federal system. There are 22 States and a number of Union Territories in India. Even if the Union Territories have to be treated as such, the states should be looked upon as equal partners in some way or the other. Contrary to this, the disparities between the States in respect of representation in Parliament are too much. As against 85 MPs for UP, Nagaland has only one MP in Lok Sabha whose presence has no meaning in the midst of 545 MPs. Even in Rajya Sabha, where all the states should have equal representation, Nagaland has only one MP out of 275 MPs.

The Articles 3 & 4 of the Constitution of India are tantamount to imposition of brute majority decision on the helpless smaller states whose presence in Parliament is insignificant. The States boundaries should be based on the traditional boundaries which existed before the advent of the British and the choice should be given to the people concern to choose where they wish to belong. No States should be allowed to claim the legacy of the British colonialists as territorial jurisdiction as being done by Assam.

The State of Nagaland was created under 16-point Agreement of 1960 in which the new State was to be placed under the care of the External Affairs Ministry. However, Nagaland had been placed under Home Ministry without the knowledge and consent of the Nagas in 1969 nulifying the provision of 16-point Agreement. "2. The Ministry-Incharge : The Nagaland shall be under Ministry of External Affairs, the Government of India." Had the original arrangement continued, perhaps, the conditions of Nagaland could have been altogether different in as much as corruptions could have been of tolerable degree. The 16-point agreement should have been honoured in letter and spirit and the administration should be kept outside the purview of Home Ministry because by making uniform administrative services all the vices have been imported and filled the State in a suffocated manner. There were other nullifications of the 16-point agreement which are also responsible for failure of establishing "good will" in respect of Centre – Nagaland relations.

LEGISLATIVE RELATIONS

2. In keeping with the provisions of Article 371 (A) of the Constitution of India, the State of Nagaland should be given a wide range of legislative powers covering the subjects of the Union list such as (i) power to legislate the rules and procedures to regulate the exploration of mineral resources (ii) power to pass its own election laws best suited to Nagaland conditions (under the prevalent system election expenditure is too much and after the elections the successful candidates merely work to enrich themselves to face future elections); (iii) the principle of repugnancy should not be strictly adhered to in respect of Nagaland.

ROLE OF THE GOVERNOR

3. The institution of the Governor should be abolished since it has been ineffective as the head of the state and at the most an anathema. Should the institution be felt as the necessary evil, it should be made as an elected post. Also, the special power of the Governor under Article 371 (A) of the Constitution of India should be repealed and Nagaland be placed on par with others.

THE ADMINISTRATIVE RELATIONS

4. The administrative relations between the Centre and Nagaland should be reviewed and make it to appear of federal nature. The people of Nagaland should be allowed to manage their own affairs. Too much interferences by the Centre has not helped the State in any way to develop itself.

FINANCIAL RELATIONS

5. Hitherto the State of Nagaland has been solely depending on the central financial assistance, having no resources of its own. Whatever financial assistance that might have been given for the welfare of the people of Nagaland have enabled the class of exploiters to become richer and richer and the exploited masses poorer and poorer. The central aids have simply ruined the Naga people's resolution to be self-reliant. Since everything is business motivated, nothing moves in Nagaland except corruption creating the gulf between the haves and have-nots wider and wider.

ECONOMIC AND SOCIAL PLANNING

6. The State of Nagaland should be allowed to spell out its own plan programmes based on the principle of "cut your clothes according to your size and needs." Right now high targetting and low performance has become regular feature of the State's planned programmes. The State should also be allowed to tap the foreign financial assistances and foreign capital investments. So far, Nagaland has been completely deprived of such things under the pretext of being politically sensitive State. The financial institutions have not created the desired impact in Nagaland as their investments are negligible.

MISCELLANEOUS

7. (a) **Industries** : Industrial activities should be based on the availability of raw materials locally and the issue of licenses should be very liberal. In any case, benami license should not be allowed to be operated. The Centre should come forward to extent all possible help and assistance in setting up of agro-based industries in Nagaland.

(b) **Trade & Commerce** : Freedom of trade and commerce should be granted to the State of Nagaland in respect of imports and exports of goods whereby the State should be able to create business activities and attract markets from outside State so as to enable it to have its own resources.

(c) Agriculture, horticulture, forestry, fishery, livestock husbandry should constitute the mainstay of the people of Nagaland. The Centre should come to the rescue of the State of Nagaland in overcoming

the lack of power resources and communications. The Centre should also help the State to overcome the lack of requisite finance and proper technology, leaving the job of working out the details of programmes with the State.

(d) **Food & Civil Supplies** : The supply of food and civil supplies should be on the basis of actual needs to be determined by possession of permits and cards. Right now the procurements of foodgrains and other civil supplies are being motivated by business considerations.

(e) **Education** : The socio-economic conditions of Nagaland are entirely different and it needs to evolve a system of its own to educate the children of Nagaland. The National Educational policy of no "detention up to class IV" should not be imposed on the State of Nagaland because the education of Naga children begin after the age of five only but not from the cradle. Secondly, the National Educational policy of supplying highly technical and sophisticated medical equipments to the Schools should not be imposed upon the Naga people because that may amount to encouraging of quakes and gambling of human lives. Thirdly, taking Hindi or any other Regional language as compulsory subject has been a stumbling block to the students of Nagaland who go outside the State for higher education. This should be done away with.

REPUBLICAN PARTY OF INDIA (K)

MEMORANDUM

Centre must be strong

(1) Ours is a Federal State. In Federalism the Centre-State relations assume a very great importance. In a country like India which is heterogenous with so many castes, creeds, languages, religions having varied and conflicting interests a strong centre is a must to keep the country fully integrated. To maintain unity in the midst of number of — fissiperous and divergent forces is of paramount importance realising the importance of this aspect the founding fathers of our constitution have made the centre strong. Secondly, ours is a flexible constitution, and therefore can meet any challenge including the centre-state relations — while advocating a strong centre our party does not mean that the states be reduced to the status of Municipalities — Status must also grow strong economically, educationally etc. The present scheme in the constitution avails the states of this opportunity. But much depends on how it is worked out. Dr. Babasaheb Ambedkar, the Chief Architect of the constitution has said that whether a constitution is good or bad depends on how it is implemented.

The party does not approve of the idea that during normal times there should be greater decentralisation and more centralisation at the time of emergency. It is a fallasious idea.

Article 3 of the Constitution does not need any reconsideration

(2) Article 3 of the constitution provides that Parliament may by law (1) form a new state (2) increase the area of any state (3) diminish the area of any state (4) Alter the boundaries and (5) Alter the name of any state. During the past 34 years this provision has worked well. This provision is complete in itself and meet successfully any eventuality.

Legislative Relations

(3) The constitution has provided lot of legislative autonomy to the states. I do not know of any instance where the centre has encroached upon the legislative powers of the state under the cover of national interest.

In respect of any subject in the concurrent list the centre should consult as far as possible the states before hand. The adoption of such a course will not strain the relations between the union and the state.

In the national interest or public interest if Parliament needs legislation on the subject exclusively within the competence of the state it should be temporary and quite limited. A demand is voiced in many quarters that the state be given greater autonomy. This demand is of repeated now-a-days as some other political parties have come to power in many states. They feel that their powers are inadequate. So long as Cong (I) was ruling in most of the states, such a question did arise. Under such circumstances under some pretext to have a legislation on the subjects in IInd list will strain the relations between the centre and the states.

Role of the Governor

(4) In federalism Governor is a close link between the centre and the state. He is certainly. not an agent of the centre nor a dignified servant of the centre. To maintain cordial relations between the centre and the states is of paramount importance in the performance of his duties. His other important duties are:—

(1) Making report to the President suggesting action under article 356(1)

(2) Appointment of Chief Minister under article 164 and

(3) Prerogation or dissolution of house under article 176 (2).

In all such matters he has to act without any bias and without being influenced. But now-a-days it is felt that the Governor is the tool of the centre. This has been displayed in certain states such as A. P. and J. & K. where the Governors action was highly objectionable and most uncalled for. He is there in the state not to serve the interest of the ruling party at the centre but keeping true to his conscience he must act since it is the authority of the centre to appoint the Governor, it is just possible to make use of him to subserve its own purpose at the time of political up-heavals. That is due to human weakness.

Therefore, I suggest that the Governor should be appointed in consultation with the state. I also agree with the suggestion that Guidelines on the manner in which discretionary powers should be exercised by the Governors should be formulated by the inter-state Council and approved by the union.

Such guidelines should be placed before both houses of parliament. In this behalf a question of constitutional validity will arise. But it shall serve the purpose of the constitutional provisions. It shall have a pragmatic utility.

Administrative Relations

(5) Article 365 can be retained as a reserve provision although it has never been operated upon.

The Administrative Reforms commission has observed that the issue of direction (under articles 256 and 257) of the centre to a state is an extreme step and should be taken only in cases of absolute necessity where no other means of securing the objective are available. The assumption of Governance by the President under article 356 is a drastic medicine prescribed in the constitution as a last resort which are not to be administered as a daily food. This view is quite correct.

For many years after Independence there was a congress rule throughout. Therefore, the centre did not feel necessary to resort to this remedy even when there were to some extent disturbed conditions in certain states. But now the picture is changed and likely to change to a greater extent under such circumstances the Government at the centre might use recklessly these provisions of the constitution. The fear is that this constitutional provision will then be greatly misused as has been recently experienced in certain states where there was non-congress (I) rule. I, therefore, feel that the Governor while making report under the said articles should exercise utmost restraint and should be free from any influence which might tend to bring about a fall of any state Government.

My party upholds the 44th amendment. The 42nd amendment was brought about by Mrs. Gandhi to suit her own designs and ambitions.

The central agencies such as Agricultural Prices Commission, Central Water Commission, Central Electricity Authority, Director General of Technical Development, Monopolies and Restrictive Trade Practices Commission, Food Corporation of India etc. handle activities relating to subjects enumerated in the state and concurrent lists of seventh schedule to the constitution, it is alleged, are making inroads in the states' autonomy.

The scope of the said central agencies should be so curtailed that the states should feel that there is no more interference with their autonomy. It can also be suggested that the centre should issue suitable guidelines in this behalf to make states feel that their autonomy is not undermined.

To maintain a cordial relation between the centre and the states such an action is imperative. In Federalism the states have surrendered to the centre a certain portion of their sovereignty that does not mean that the states have surrendered every thing. There is a demand for greater autonomy for the states. But I feel whatever autonomy is given to the states may prove to be enough provided the constitution is worked out in letter and spirit.

To locate and use the Central Reserve Police in any state whether on demand or otherwise cannot be construed as an act of central intervention in any state. It is the duty of the centre to see that law and order are protected in every state article 355, therefore, provides for such a measure. In many states, the help of central reserve police was sought for. Therefore, there is nothing wrong in locating such a force in those states.

Broadcasting and television facilities should be shared both by the centre and the states on a fair and reasonable basis as both have got equal need for access to these mass communication media for putting across their views to the people.

Article 263 of the constitution which appears under the caption. "Co-ordination between states" empowers the president to establish an interstate-council, if it appears to him that it would serve the public interests would be served by the establishment thereof. The Administrative Reforms Commission has also recommended the establishment of such a council.

Such a council would definitely be useful in ironing out inter-state and the union-states difference. It will thereby secure better co-operation between the states. This council should have a separate Secretariat.

Financial Relations

(6) The Constitution makers expected that the Revenue gap between the resources and the fiscal needs of the states to discharge their growing responsibilities will be covered by a scheme of Devolution partly by sharing with the states, the proceeds of certain central taxes and duties and partly by grants-in-aid from the union while periodical changes will be made by the President on the recommendations of the finance commission.

But this scheme has not worked well within the past 34 years as has been observed by the study team of Aministrative Reforms Commission. The states have remained, according to the study team, receivers while the union became a giver. Such a opposition should change.

I advocate the following alternatives namely.

(1) All the taxing powers be transferred to the union list to form a shareable pool, respective shares of union and the states as a whole being specified in the constitution itself, the amount and the principles on which the states shares would be distributed amongst the various states be determined by the finance commission.

(2) and that more central taxes such as corporation-tax, customs duty, surcharge on income tax etc., be brought into the shareable pool.

To bring about revolutionary change in the economic life of the people the states are not in a position to do it unless the states get an enhanced share from the divisible pool.

The centre can increase the income by taxation (But it should not be disproportionate to the income of the people) and by having better control over expenditure. I am of opinion that the public funds are

just squandered by the party in power. it is believed that lot of money could be saved for the economic development if the extravagent expenditure by the Government's both at the centre and the states are controlled. It is indeed a fact that our Governments earn like beggers and spend like moghals.

I fully subscribe to the view that who collects the funds and how the collected funds are distributed are not very relevant as all funds flow from the people. What is more important is that the funds are spent prudently and that the benefits go back largely to the people.

I also agree with a view that there is criticism that the expenditure of the union is not being organised in the best interest of the nations growth and instead there are trends for recurrence of in-fructuous, unnecessary and uneconomic expenditure.

There is a demand in several quarters that the expenditure of the union should be scrutinised so such trends may be contained and additional resources found for helping the states.

It is unfortunate that the states which complain of meagre developmental resources are indulging more and more in unnecessary expenditure mainly on a populist nature and not on economic reasons, thereby depleting the already insufficient resources for developmental purposes.

Therefore, there has been a suggestion that there should be a permanent national expenditure commission to assess the nature and quality of expenditure and the need for Revenue resources for both the centre and the states to enable them to discharge their respective obligations reasonably and satisfactorily.

I, therefore feel that the appointment of the national expenditure commission on permanent basis would go a long way in correcting the erring Governments.

The present arrangement with regard to the provision of central assistance in dealing with natural calamities is not satisfatory. It is more arbitrary and biased.This has een the experience by some states where there is congress (I) rule. Secondly, it is again unfortunate that the relief assistance is not properly and fully utilised. To ensure proper utilisation of such assistance a high-level committee should be appointed by the states to check the expenditure. There are reliable reports that the executive machinery misusés such funds.

There is no need of any loans Council as it would not be better institution than the Reserve Bank of India.

Mr. Ashok Chanda, the Chairman of the 3rd Finance Commission has pointed out that the Comptroller and Auditor General of India was not doing all that was possible to keep a check on the accounts of the union and the states.

Therefore, Parliament has passed a law determining the duties and power of the Comptroller and Auditor General. But it is experienced that this has also not enabled him to keep an effective check watch on the expenditure of the union and the states. There was no need of any such enactment as the constitution has vested in him this power. The point is it is to be properly exercised which has not been done due to various reasons. There was no need of any such enactment as the constitution itself has given him this power.

The Comptroller and Auditor General is responsible only to the President and Governor of the State for submission of his reports which are presented to Parliament and the State Legislatures respectively. It is then the Parliament and the state legislatures to exercise such checks that they feel necessary to ensure financial propriety.

But the report of the Comptroller and Auditor General are not comprehensive enough and reasonably accurate to enable them to take firm views in the matter. Therefore, the reports of Comptroller and Auditor General are not enough to ensure the financial propriety.

The Public Accounts Committee of Parliament and of State Legislatures examine the reports of the Comptroller and Auditor General and further probe into issues that they think are important.

In my view a sufficient check to answer the voiced complaint of insufficient expenditure control at the centre and in the states is not sufficient.

The Estimates Committees of Parliament and of the State Legislatures go into the wider aspects of policies and programmes than those covered in the reports of the Comptroller and the Auditor General, and advice the Government on improvements necessary. My view is that in the light of the need for a scrutiny of expenditure of the union and of the states this committee cannot act as a watch dog to give useful Legislative and administrative advise to the administration. The present estimates committee is only a show piece. Its recommendations are not seriously thought over.

A permanent national expenditure commission is essential for assessing the propriety of expenditure of the union and the states. No doubt such constitutional authority is already vested in the Comptroller and Auditor General of India. But that has not been able to achieve the desired result in spite of the public Accounts Committee and estimates committee of Parliament and states.

ECONOMIC AND SOCIAL PLANNING

(7) Economic and social planning, as per the provision in the constitution, recognised a vital role which the centre might play in con sultation with the states in the matter of undertaking planning in a National perspective, to meet National needs, subscribing to National priorities etc. In this planning relations the study teams have noted certain shortcomings. They are—

(1) The plans do not secure the commitment of the states by involving them earnestly in the primary task of determining goals after full and frank consideration of all the basic issues with the states and that the consultation procedures at the meetings of Chief Ministers and the Central Ministers is superficial and hurried.

(2) The Union Ministries tend to the incorporation of the schemes framed by them.

(3) In respect of programmes legitimately falling wholly with inthe jurisdiction of the states, there is lot of interferance of the centre.

These shortcomings should be removed.

That can be done by setting up on a statutory basis a National Development Council consisting of all the Chief Ministers of the states presided over by the Prime Minister and experts in various fields as members. It should have power to discuss and approve the recommendations of the Planning Commission with regard to economic development. When once the development plans are approved by the council the states should be free to implement them in accordance with the approved pattern. Secondly, adequate financial resources should be provided to the states.

The resolution, setting up the Planning Commission, states that the commission would act in close understanding and consultation with the Ministries of the Central Government and the Governments of the States. This resolution has not been effective. And, therefore, the setting up of a National Development Council as has been observed in para above can bring about close understanding and consultation with the State Governments.

Composition of Planning Commission

The Planning Commission should be enlarged to include representatives of all the states and made an independent body, free from all pressures of Union Cabinet which generally reflects the policy of the ruling party at the Centre.

(Sd.)
President.

SOCIALIST UNITY CENTRE OF INDIA

MEMORANDUM

Introduction

1. At the outset we want to state clearly that we do not share the view that the root cause of the malaise that prevades the whole socio-economic-politico-cultural sphere giving rise to widespread starvation, penury, unemployment, illeteracy, perversion of morals and values lies in the particular relations between the Centre and the State or in otherwise if the states enjoy autonomy and freedoms, for which there are now demands, the malaise will be overcome. We are also no believers of the unhistoric and unscientific proposition that progress or retardation in the socio-politico-economic-cultural fields in a country is determined by the constitutional framework or to be specific on the nature of devolution of rights and responsibilities between the centre and the states.

2. We hold on the contrary that the constitution outlining the arrangements of political administration belongs to superstructure which serves a definite economic base. In our country it is the capitalist productive system that constitutes the economic base. And as the Government is nothing but the defender and protector of the dominating class interests of the ruling class, here, the capitalist class, both the Central and State governments do the same. Both of them defend and project the capitalist productive system, the ruling capitalist class and its class objectives.

3. On the basis of concrete historical experiences we are also of the firm opinion that concentration and centralisation of financial-political-administrative powers does not depend on, whether the constitution of a country is federal or unitary in form. It is determined on the other hand by the law of capitalist development. This law of capitalist development gives rise to monopoly finance capital and financial obligarchy in the economic base that gets its reflection in the concentration and centralisation of powers in the bureaucratic administrative system. Also in order to defend and protect the capitalist productive system, the Central government, more particularly, takes the initiative to build up infrastructure conducive to the rapid growth of monopoly capital and in that process has concentrated enormous economic and political powers. That is why the best of federal principles in the constitution of the USA could not arrest the same concentration and centralisation of powers as the unitary form of constitution on convention of the Great Britain provide.

4. What is alarming and needs real attention is the trend of authoritarianism that is distinctly visible in our country also. This authoritarian trend is completely different from autocracy in the classical concept. It is the outcome of a decaying capitalist system at the third intense phase of general crisis, that is, overall crisis, the entire capitalist world has been passing through. It therefore, bears far more dangerous trend of all out fascism, trampling under foot basic democratic concept, norms and values, rights and liberties which were once held as the vary cornerstones of bourgeois democracies. The prime question on the Centre and State relations cannot therefore be as to who will trample under foot the democratic norms and principles, minimum administrative neutrality, relative independence and autonomy of the judiciary and educational institutions— the Centre or the State; nor can it be as to who will fleece the common people by fiscal resources for the benefit of the capitalist class and vested interests—the Centre or the States.

The focal point should therefore be the concrete objectives and goal of social progress, its clear direction and the fundamental democratic principles, norms and values which are to be guarded zealously.

5. From this specific and basic outlook, we hold that the following should be taken up as the most relevant questions in determining the centre-state relations :

(a) neutrality of administration, independence of judiciary and autonomy of the educational institutions, guarantee of civic liberties and democratic rights of the citizens and democratic norm in administration must be guarded whether at the central or in the state levels ;

(b) arbitrariness and discrimination in distribution and transfer of fiscal resources, in controlling the financial institutions as also the financial and economic policies along with the Planning

Commission and the National Development Council by the Centre should be checked effectively ;

(c) all laws that vest absolute powers in the Central authority to subvert democratic process both at the Central and State levels like the ones during the imperialist rule and now being used frequently in the sectarian interest of the ruling party at the Centre as also to reinforce the trend of authoritarianism-fascism should be abolished for bare survival of a democratic policy

(d) the Planning Commission, the National Development Council, Election Commissions, the AIR and Doordarshan must be reconstructed to be broad based and autonomous. Clear objectives of development must be determined democratically. That is to a say, creation of employment opportunities through industrialisation, improvement of infrastructure, modernisation of agriculture and upliftment of rural life, supply of basic amenities of life to people must be made actual targets of development so that the goal and objects set in the chapter of Directive Principles do not remain pious wishes but made real obligations of the governments to the people. If the people of India have given unto themselves the constitution as has been written in it, they cannot remain content with empty declaration of certain rights and principles. They want to see those translated into practice. By 'national development' they cannot accept development and concentration of wealth at the hands of the ruling class on the one hand and the aggravation of their miseries and destitution on the other hand.

(e) The last but of not least importance is to ensure removal of regional disparities and imbalances in the socio-economic progress in order to curb the regional parochial divisive trends. In doing so, every effort is to be made, economic-politcal-social-cultural, to reinforce the process of development of one Indian nationhood that once grew out of the national freedom movement and can only be sustained and furthered in a democratic composite society.

By encouraging intermingling and assimilation of nationalities while ensuring the protection of equal rights and legitimate aspirations especially of the less developed and dominated nationalities this process can be helped.

6. In our opinion actually the whole gamut of the socio-eonomic-political questions is involved and deserves thorough examination in order to have a proper grasping as to why dissatisfactions and resentments are being aired again and again on the Centre-State relations which cannot be anything other than about the functioning relationship of administration between the two although both serviving the same state system and the dominating class. The content may lie in the political rivalries between the different parties in powers as those most vociferous seem to be more concerned about getting more share in financial resources for the state while not demanding forcefully the restoration, preservation and further extension of basic democratic norms and values, in the system of governance and untramplled rights and liberties of the people.

With this note of basic difference in approach and outlook to the whole question, we touch only on the salient points posed in the questionnaire in our following observations.

QUESTIONNAIRF

PART I

INTRODUCTORY

We reiterate that to us the slogan "More power or autonomy of the states with a strong centre" is contradictory in terms and misleading. The fundamental issue is guarding the essence of democratic methods and principles of functioning and here both the Centre and State governments are equally guilty. They are both offenders as regards denying administrative neutrality and fairness, fairness in the electoral process, protection or relative freedom and autonomy of judiciary, educations institutions as also local administrative bodies, freedom of press and civic liberties and democratic rights of the people.

Be that as it may, we are totally opposed to the particular provisions bearing the legacy of the British imperialist rule still being retained in the Constitution. Articles 356, 357 and 365 referred to in the questionnaire vesting special powers in the Centre to remove the elected state governments are simply the reincarnation of similar undemocratic and autocratic provisions of the Government of India Act 1935 against which serious opposition was raised from the national political platform then. These provisions have been repeatedly used from the sectarian parliamentary interest of the ruling party at the centre against parties in opposition forming governments in some states or the Chief Minister not to the liking of the central ruling clique. The recent examples of Pondicherry, Sikkim, Jammu and Kashmir and Andhra Pradesh bear testimony to this truth. The office of the Governor was used on all the occasions to cause defection of MLAs by horse trading. We reserve our comment on the post and role of Governor in Free India, as it comes in a separate chapter of the questionnaire.

Here we observe that like the earlier ones, the articles 254 and 256 make the state governments unnecessarily dependent on the Centre as regards bringing legislations of their own and carry the legacy of the imperialist administrative scheme. It may be worth recalling that these provisions too came in for severe opposition from the national political platform in the thirties. These should be removed.

We are however for retention of articles 348 and 349 making it obligatory to retain English language in court proceedings and enactments of parliament and assemblies. We stand for two-language formula— mothertongue and English in educational system from primary to higher studies as also in all official matters of administration.

As regards the modality in effecting territorial changes or formation of new states from the old ones, we are opposed generally to any further

fragmentation. In our opinion, in a multi-nationality state like ours fragmentation is no answer to the problem of preserving the rights of growth and development of minority nationalities dominated by the major ones. In case minority domination finds expression in public agitation or legitimate democratic mass movement by minority nationality people being dominated, then the decision for the formation of a separate state within the union for them should be decided by a referendum to be conducted by the 'Minorities Commission' which can be formed for that purpose or may be a permanent body as a watch-dog of minority nationality peoples rights and legitimate aspirations free from chauvinistic outlook. The Minorities Commission should be properly constituted with representation from all nationalities and vested with constitutional powers so that its findings and recommendations may be binding on the central and state governments concerned.

PART II

LEGISLATIVE RELATIONS

We are firmly opposed to centre's growing encroachment on the administrative field and power of the state in the name of 'public interest'. State governments cannot be reduced to rubber-stamp of approval of the decisions and actions of those in authority at the Centre.

We are opposed to forming any police, para-military force like the "National Guard" which can be despatched to any State in the name of keeping 'law and order' which is a state subject. Induction of military in administration must be stopped. Similarly we are of the firm opinion that the State bills should not be kept hanging for the President's approval for more than two months. We also hold that if a state bill on any concurrent subject precedes the Centre's bill that is often brought to stall it, the former must get the approval. After the Centre brings an enactment on the same, that shall be forwarded to the State legislature for reconsideration whether in the light of the latter, it deems necessary any change or revision or the bill, it has passed before. In case, a revision, the revised one will be operative in the state.

We also hold that in case of concurrent subjects, any bill that the Centre decides to bring must be circulated in draft form to all the states to elicit the opinion of the state legislatures before being given final shape and placed to parliament. States must be given right to articulate and defend their respective view points to Parliament through printed documents.

We also hold that the Centre shall not have any right to legislate on state subjects whether temporary, or permanent in nature nor subject to 'periodic review'. Although we think it is immaterial whether the centre or state has any particular subject as per the seventh schedule because after all it is the capitalist system that is being served and not the people. Still even from democratic norm we suggest thorough redivision of subjects under the three lists of the Seventh Schedule in view of the changed context. For example, state governments must have effective say in the functioning and investment policy of the financial institutions working within the states like banking and insurance (items 45, 47) as also of all big industries, mines, regulation of labour and safety of mines, regulation and development of Inter-state rivers and river valleys sanctioning of approval for cinematograph film for show (items 52, 54, 55, 56, 60). We have different opinion about use and management of river waters, educational institutions and cultural media including films, given separately. We hold, however, that education must be a state subject though under the general guidance, control and supervision of the National Education Commission, we have suggested hereinafter.

In short, apart from the basic constraints of the productive system and its reflection in the basic outlook of the constitution, no further constraint should be there for the state governments in the form of centre's interference and encroachment.

PART III

ROLE OF GOVERNOR

The post, appointment and role of the Governer in independent India follow the same objective, motive and method as were in British India. The very purpose of gubernatorial post is to be questioned. If it is to prize the superanuated politicians of the ruling party or any bureaucrat as an agent of the ruling party at the Centre, it is obnoxious and should be done away with. If it is to ditto the Central Government or the state government it is a costly cipher and should also be done away with. Naturally, therefore, article 154(1) that vests 'executive power' of the state in the Governor must go. For the legal conotation of the 'executive power' is very wide and may partake of legislative or judicial character. Article 179(1) and (2) regarding the governor's powers to summon, dissolve and prorogue the state assebmly must also go. We are also opposed to dissolution of elected assemblies after the parliamentary poll on the plea of a party having got the majority and that parties opposed to it are in power different state governments.

PART IV

ADMINISTRATIVE RELATIONS

We reiterate our opposition to articles 256, 257 and 356 and demand their removal. In case of riots or cowardly violence going on for more than three months, the state legislatures can be dissolved either by a resolution passed at the legislature or in parliament and election must be held within three months thereafter. To conduct the concerned state's administration during this interim period, the Centre with parliament's approval can appoint a board of administrators not more than five in number, constituted by persons from retired judges of the supreme court or high court, distinguished educationists, economists and retired men of administration having unblemished record. There must be an independent Election Commission, having its separate office and staff which shall be charged with full responsibility of preparing electoral roll to conduction of elections, not dependent either on the Centre or state in any

matter, like finance, peace-keeping force, etc. Stringent punishment should be meted out to anyone found guilty for any corrupt practice in the electroal process. Separate Election Tribunal should be set up for expeditious disposal of all election disputes.

We hold that all the Central bodies like Agricultural Prices Commission, Central Water Commission, as enumerated in Q. 4.7 should be formed by men of eminence of proven independence of opinion and of unimpeacheable character, men reputed in respective fields drawn from the educationists, economists, social scientists, eminent judges and administrators with technical knowledge and background. States' representation of views to those commissions can be effectively done by constitution of State's Council whose decision or recommendation shall be given due consideration and generally accepted by those bodies unless rejected on specific reasons to be notified. In case of divergence of views between those bodies constituted on the basis of consensus and the State Council, the matter is to be referred to the Planning Commission which is to be restructured.

We propose the formations of Inter State and Regional Councils for ironing out of differences, removing irritants and for an integrated development. The Regional Council shall have power to resolve regional disputes put forward recommendations for removing specific problems and difficulties, standardisation of prices of inputes and products as also taxes and duties. Regional coordinated activities for agricultural, industrial and infrastructural development, controlling mobility of labour etc. All these recommendations will go to the Planning Commission vested with the task of policy framing and the National Development Council as the implementing body.

Both the Planning Commission and National Development Council should be autonomous bodies to be appointed by Parliament out of panels considered by the State legislatures also and having representations both from the states and the centre in the consultative committees of both. Priority in planned expenditure to be determined by the Planning Commission on the basis of recommendations of the Regional Councils must be on modernisation of agricultural, industrialisation, infrastructural improvement and creation of gainful employments through those. Particular attention is to be given for development of backward areas or regions and in the states where unemployment problem is most pressing. All appointments are to be given through Employment Exchanges under the administrative control of the National Development Council and all Indian citizens shall have equal right in a fair test.

The specific plan and schemes for state's or regional development subject to the approval of the Planning Commission shall be met by a proportion of 70:30 respectively by the Centre and the State/Region. The plan money should go directly through the Planning Commission and shall go to the National Development Council for execution of the plan or scheme with the help of the Regional Council or State as the case may be. A Regional Development Council with regional representation may also be formed for that purpose. This process will go a long way to stem the pernicious trend of regionalism, remove regional disparities in development as also eliminate misuse of precious resources both by the Centre and State governments. Planning and Development agencies must be freed from corruption of position and powers of political parties ruling at the Centre and States.

It is known to all that the civil services were built up as 'steel frame' by the British imperialist rulers working whether at the centre or states for the brutal, ruthless and savage exploitation, oppression of the people and even to bring cleavage or division among them on communal, parochial, casteist lines. The mental make up cultivated in personnels of these services has been of the ruler and not of a public servant. In the alsence of democratisation the socials, cultural fields during and after the freedom movement the same mental make up along wit hregional, parochial, communal, casteist feelings prevail very much in these services.

The present rulers, both at the Centre and States the main architects of all these communal, casteist and parochial riots etc. as also corruption that has become rampant and a serious national problem are using as the main instrument in the bureaucratic set up. An industrial, bureaucratic military complex has since replaced the civil society that is ruling the roots and bringing all sorts of degradations in the country. Is the Commission prepared to delve delvep into the whole issue of this social malady? So the civil officers, whether state cadres or central cadres when are meant for serving the vested interests and more so under the iron-grip of the present bureaucratic-industrial-military complex and where conformity has become the greatest virtue, can an individual honest officer maintain his honesty and sence of integrity to serve the people's interest in the truest sense of the term ?

We also propose constitution of autonomous bodies like the Central Education Commission, All India River Waters Commission, All India Radio and Doordarshan as also Central Cultural Board for Cinema and other cultural media all to be given freedom and independence of activities. While education must be a state subject although the essence of its content or syllabus must be uniform all over the country, educational and research centres must enjoy autonomy and freedom in academic pursuit and should therefore be guided by an Education Commission constituted with distinguished educationists, men of letters and persons having distinguished record in academic field. The River Commission will take care of total river water resources and distribute those according to actual needs of the states and will be in charge to keep these free from pollution.

We are also for a Press Council elected by the working jouranist and editors. The body will set down a definite code of conduct against yellow journalism and shall have the power to provide remedy against both infringements of this code as also any pressure on and discrimination, against the press by the Government both at Centre and States.

PART V

FINANCIAL RELATIONS

The first thing to be noted is that the same pattern of states' absolute dependence on Centre's assistance by way of transfer of share of taxes as per article 275 and grants-in-aid under article 282 still prevails. The basic conception is still that the centre will monopolise fiscal powers and the states no matter how much they contribute to Centre's tax resources will have to be rest content with whatever comes to it from the centre. In fact, article 282 which was originally meant for centre's special grants to the states in case of an extraordinary situation like natural calamity has superseded the importance of article 275 which makes provision for distribution of resources between the centre and states from the divisible pool. It has become the source of consternation in as much as this discretionery power at the centre has been misused in petty parliamentary rivalry disregarding the actual need of the states.

The States' chief source of resources had till recent time been the share in income taxes. Of late the centre's growing dependence as tax revenues on surcharges excise duties and rise in administered prices deprive the state's having a fare share from the divisible pool. The Finance Commission's recommendations have only left 25 to 27 p.c. of the divisible pool to the states. This has placed the states under heavy debt to the central government—the debt increasing from Rs. 18,785 crores in 1978-79 to Rs. 37,406 crores at the end of 1983-84. Even in the case of having share in income taxes, the states are being deprived unjustly of taxes on union emoluments, interest on recoveries and penalties. They are also being deprived of fiscal earning on the investments in National Savings Certificates etc.

In view of this dismal picture we propose the following re-arrangements in fiscal administration :

(a) Abolition of duplication of taxes.

(b) Taxes like corporation taxes, custom duties, surcharge on income-tax and agricultural income tax should be centrally levied and should be divided on the principle of real need of the states.

(c) States should collect taxes and pay the central quota to be fixed on them and the excess of collection over the quota shall go to the states.

(d) All the planned expenditures and on schemes both by the centre and the states must be cleared by the Planning Commission and the National Development Council shall be charged for their implementation.

(e) All the expenditures to be subject to the scrutiny of national audit machinery.

(f) Grants-in-aid from the Centre or in the alternative Centre standing as guarantor for states borrowings should also be provided to the States taking particular welfare scheme like state trading in essential commodities to distribute those in controlled prices to the common people through public distribution system, etc.

What we want is a national outlook in the matter of fixation of taxes, containment of menacing increase in black money and in public welfare schemes of worth not in populist stances and wasteful expenditures. This re-arrangement we hope may do some justice to the directive principles by bringing to the fore the urgency and importance of well directed pro-people measures, to the extent possible under the present socio-economic system.

Loan Council can be set up with the financial resources both internal and external but must be governed by the autonomous Planning Commission and the loan from it can be obtained only on development scheme of the states, cleared by it.

The idea of a National Economic Council proposed can be taken care of by reconstitution of the National Development Council along with constitution of Inter-States and Regional Councils suggested by us.

We reiterate that for a well-directed socio-economic development stoppage of wasteful expenditure both at the centre and states brooks no delay. We hold the Centre guilty of flittering away precious resources on militarisation of economy at an alarming rate and over subventions and subsidies to the agricultural and industrial capitalists. The subventions and subsidies must be related to procurement of produce and collection of taxes, otherwise they will be doubly benefited by not paying taxes but getting subsidies etc. which is against all canons of fiscal justice and equity.

We are in favour of autonomous bodies like the Planning Commission and the National Development Council to have controlling powers over the expenditure pattern of the governments both at the centre and states.

PART VI

ECONOMIC & SOCIAL PLANNING

Many of the questions have been covered already. We are in favour of (1) integrated national planning implemented through state planning ; (2) the national planning must be directed towards modernisation of agriculture; industrialisation and coping with the menacing problem of unemployment; (3) initiative in drafting the states planning should be with the states to be approved by the Regional council, Planning Commission, Priority being on removing regional imbalances in development, unemployment and best use of natural resources and industrial potentialities in the interest of the common people; (4) the present criteria of allocation of funds for plan expenditures in the states do not take into account the actual needs in view of pressure on employment opportunities due to migration of labour as also the natural benefits accruing to industrial ventures due to proximity of raw materials etc. In point of fact about ten industrialised centres have grown in the Union territory. So a balance needs to be taken between disposal of industrial developments in less developed areas and coping with unemployment problems in industrialised areas. The main question is setting the priorities of development which must include the all-important issues of creating employment opportunities and provision for essential needs for a decent

civilised life. We are therefore for channelising all plan expenditures through Planning Commission, reconstituted on the line suggested above and check on leakage by national audit system. As an element of bonus on efficiency, states successfully implementing the planned expenditures should be encouraged and entrusted with additional projects that may be financed by the Central Fund or Central Loan Council which may be of importance from the object of national planning.

We also hold that equalisation of freight charges and duties on all industrial inputs is a must to remove inequalities in costing of output that stands as a hindrance as also in one of the major irritants of the states.

What we feel is not so much 'cooperative federalism' in wasteful expenditure on populist measures and heaping economic burdens on the common people but centralised planning based on the recommendations of the states implemented through the states under the supervision and control of the National Development Council and National Audit towards well-directed objectives and fulfilment of priorities. Competitive element between the states in discharge of these reponsibilities will remove much of their discontents, tone up administrative efficiencies and make them directly responsible for non-performance etc. and what is more, remove the evil trend of discrimination by the Central authority in administration from narrow political objectives of the party in power at the Centre. Let the political rivalries between the parties in governmental power be directed in concrete achievements of urgent pro-people measures.

PART VII

MISCELLANEOUS

In the matter of industrial development of the country no parochial or discriminatory attitude should be allowed. If setting up of petro-chemical or electronic industries in say, West Bengal, is rejected by the Centre on the ground of it being a border state, can there be any other crudest possible example of a discriminatory treatment solely guided by narrow political outlook of the party in power at the Centre. The question should therefore be where shall lie the authority in matter of planned development ? We reiterate that it must be with the autonomous Planning Commission. The national planned development must come through state plannings approved by the Planning Commission. The states should be offered with major schemes. The question of resources mobilisation being at the hands of the states under the system we have suggested, there cannot be any question of its constraint. The question of under-development of states due to centre's unhelpful attitude will not arise if the revised system of the decentralisation of initiatives at state level to fulfil centralised planning becomes the rule and not the exception. Rather, it will bring more efficiency in tax collection from the rich by the State administration as on the success of it will depend on the individual state's (particularly those industrially developed) claim on undertaking major investment ventures. About the states industrially underdeveloped the centralised industrial planning may be made with the help of the resources either coming through special grants-in-aid or credit from the Central Loan Council as suggested hereinbefore.

PART VIII

OTHER COMMENTS

We hold that agriculture should be developed from a Central Planning taking particular care of removing backwardness in technique of production, disparities in irrigational and marketing facilities and to ensure standardisation in wages and prices of products and the growing needs both for direct consumption by the people as also industrial consumption. Graded agricultural income tax, a big source of tax revenue yet remains untapped dispite the Wanchoo Committee's recommendations which should be introduced and the states should be charged with the responsibility of collecting it as other taxes. The development of agriculture and allied activities should be aimed at removing unevenness, disparities in earnings and generation of gainful employment to rural unemployeds through national planning.

The States must be vested with the power and resource to procure agricultural produces through the State Marketing Societies both for guarantee of reasonable price for the producers as also to provide food and essential items of consumption to the people through public distribution network.

The Educational Institutions must be run under the control and supervision of a National Educational Council, Autonomy in administration of these institutions free from governmental interference whether at the state level or by the centre must be guaranteed. The national educational policy on the basis of uniformity of the content and two language formula—mother tongue and English must be framed up by a National Educational Commission on the basis of suggestions and concensus of all distinguished educationists, political parties, social workers, men of learning etc. The logical bent of mind must be developed and the humanist value contents through compulsory literature study must be inculcated. One Indian nationhood concept should be instilled among diversities of nationality or subnationality cultures and traditions.

We have put our suggestions which are not exhaustive in nature but just indicative; we reiterate our demands to safeguard the essence of democratic norms and values which we hope, is of prime importance in today's perspective to all well-meaning persons and bodies seriously concerned about the future of Indian polity.

(*Sd.*)
General Secretary.

GANDHI KAMARAJ NATIONAL CONGRESS

MEMORANDUM

காந்தி காமராஜ் தேசிய காங்கிரஸ் தலைவர் திரு. குமரிஅனந்தன் 11.10.1984ல் சட்டப் பேரவையில் ஆற்றிய உரை:

மத்திய மாநில உறவுகள் பற்றிய நமது கட்சியின் கருத்தாக இதையே ஏற்றுக் கொள்ள வேண்டுமென்ற வேண்டுகோளுடன் கீழே தரப்பட்டுள்ளது.

மாண்புமிகு மாற்றத் தலைவர் அவர்களே தனி நபர் -தீர்மானமாக மாண்புமிகு உறுப்பினர் உமாநாத் அவர்கள் கொண்டுவந்திருக்கும் தீர்மானத்தின் சாரம், இந்திய நாடு முழுமையாக வளர வேண்டும் என்றும் மாநிலங்கள் வளமாக வாழவேண்டும் என்றும் இப்போது மாநிலங்களுக்கு இருக்கும் அதிகாரங்கள் போதுமானதாக இல்லை. ஆகவே அவைகளை அதிகப்படுத்த வேண்டும் என்றும் அதற்காக இந்திய தலைமை அமைச்சர் அனைத்து முதல் முதலமைச்சர்களையும் யூனியன் பிரதேசங்களை ஆண்டுகொண்டிருப்பவர்களையும் அழைத்துப் பேசவேண்டும் என்பதாகும். அந்த வகையிலேயே அந்த கருத்தை ஆதரித்து காந்தி காமராஜ் தேசிய காங்கிரஸ் சார்பிலே பேசுவதற்கு நான் எழுந்து நிற்கிறேன்.

மக்கள் ஆட்சி வந்து விடுமானால் அதிகார பரவல் ஏற்பட்டு விடும் என்று தான் அரசியல் அமைப்பு சட்டத்தை உருவாக்கியவர்களின் கனவாக இருந்திருக்க முடியும். விடுதலைப் போராட்டத்தில் கலந்து கொண்டவர்கள் கூட சின்னஞ்சிறு கிராமத்தில் இருக்கும் மக்களை தட்டி எழுப்பி இந்த நாட்டை அடிமைத்தனையாக வைத்துக்கொண்டிருக்கின்ற வெள்ளை ஏகாதிபத்தியத்தை வெளியேற்ற பாடுபட்டபோது அதிகாரங்கள் யாரோ ஒருவர் கையில் குவிந்து விடக்கூடாது என்று தான் எண்ணியிருக்கமுடியும். குவிந்து விடவேண்டும் என்று நிச்சயமாக எண்ணியிருக்க மாட்டார்கள். அந்த அடிப்படையில் தான் விடுதலைப் போராட்டத்தில் தங்களுடைய வியர்வைகளையும் கண்ணீரையும் செந்நீரையும் மட்டும் அல்லாமல் தன்னையே தியாகம் செய்து கொள்ளும் நிலையில் காஷ்மீர் முதல் கன்னியா குமரி வரை உள்ள மக்கள் திரண்டு எழுந்தபோது இந்த நாட்டின் அதிகாரம் அத்தனை பேருக்கும் உரியதாக அமையவேண்டும் என்ற முறையில் தான் எண்ணியிருப்பார்கள். ஆனால் இப்போது ஒருவரிடத்தில் குவிந்துவிட்டதால் நான் ஒரு சிக்கல் விளைந்தது என்பதை நாம் பார்த்தோம். மத்திய அரசிடம் இருக்கும் அதிகாரங்களை பிரித்துவிட்டால் தான் ஒரு மாநிலம் செம்மையாக வாழ முடியும் என்ற நினைப்பவர்கள் இரண்டு விதமான கருத்துக்களை பரப்பிக்கொண்டு இருப்பதை பார்க்கிறோம்.

அந்த இரண்டு விதமான கருத்துக்கள் எப்படி பரப்பப்படுகிறது என்று சொன்னால் மாநிலத்திற்கு அதில் அதிகாரங்களை பிரித்துக் கொண்டு விட்டால் மத்திய அரசாங்கம் வலுவாக இருக்க முடியாது என்று சொல்கிறார்கள். பிரித்துக் கொடுத்துவிட்டால் அதைச் சர்வாதிகாரம் என்று சொல்கிறார்கள். இப்படி இரண்டு விதக் கருத்துக்கள் நாட்டிலே உலவுகின்றன. இதை மனதில் கொண்டு தான் பெருந்தலைவர் காமராஜர் அவர்கள் ஒரு முறை மத்திய அரசாங்கத்தின் பிரதம அமைச்சருக்கு ஒரு வேண்டுகோள் விடுத்தார். அதிகாரம் பரவலாக்கப்படவேண்டும் என்று சொல்கிறார்களே அது எந்தெந்த வகையிலே அளிக்கப்பட வேண்டும், எந்தெந்த முறையிலே அளிக்கப்படவேண்டும் என்று விரும்புகிறார்கள் என்பதை பாரத பிரதமர் நேரடியாகத் தெரிந்து கொள்ளவேண்டும் என்பதற்காக மாநிலங்களின் முதலமைச்சர்களையும் யூனியன் பிரதேசங்களை ஆளுகின்றவர்களையும் அழைத்து அவர்களுடைய கருத்துக்களைத் தெரிந்து அதற்கு ஏற்ப ஒரு முடிவுக்கு வருவது நல்லது என்று பெருந்தலைவர் காமராஜர் அவர்கள் குறிப்பிட்டார்கள். உலக மக்களுக்கு

அறிவித்தார்கள். அவர்கள் எந்த வகையில், எந்த அளவிற்கு பாரதப் பிரதமர் அவர்களை மாநில முதலமைச்சர்களை அழைத்துப் பேசவேண்டும் என்று கருத்துக்களைத் தெரிவித்தார்களோ அந்தக் கருத்தின் பிரதிபலிப்பாக இன்றைக்கு இந்தத் தீர்மானம் இருப்பதால், இதனை ஆதரித்து நான் என்னுடைய கருத்தை இந்த அவையிலே தெரிவிக்க விரும்புகிறேன்.

நாம் இன்றைக்கு பின்பற்றி வரும் சில மரபுகளைப் பார்க்கிறபோது அரசியல் அமைப்புச் சட்டத்திலே இருக்கும் சில உஷாராத்துக்களின் உள்ள ஓட்டைகளை வைத்துக்கொண்டு அதிகாரத்தை சிலர் தங்கள் கையிலே எடுத்துக்கொண்டு மக்களை மிரட்டி, பயமுறுத்திக் கொண்டு இருக்கிறார்கள். அதனால் என்ன ஆபத்து ஏற்பட்டது என்பதை நாம் அறிவோம். அண்மையில் கூட சபாநாயகர்கள் எல்லாம் ஒன்று கூடி ஒரு முடிவு எடுத்தார்கள். ஒரு அரசாங்கத்தை நடத்துவதற்கு உரிய பெரும்பான்மை இருவருக்கு இருக்கிறதா இல்லையா என்பதை முடிவு செய்யவேண்டிய இடம் சட்டமன்றம். அந்த உரிமை வேறுயாருக்கும் இருக்கக்கூடாது. ஆனால், மரபு எப்படி இருக்கிறது என்றால் கவர்னராக இருக்கிற ஒருவர் யாருக்கு பெரும்பான்மை இருக்கிறது என்பதற்கு தான் மட்டும் 'சாடிஸ்பை' ஆகிவிட்டால் போதும், அவருக்கு இருக்கிற டிஸ்கிரிஷனரி அதிகாரத்தை வைத்து இவருக்கு பெரும்பான்மை இருக்கிறது, இன்னாருக்கு இல்லை என்று முடிவு எடுத்து விடலாம். அப்படி எடுக்கப்பட்ட முடிவின் காரணமாக ஏற்பட்ட கிளர்ச்சிகள், உள்ளக்குமுறல்கள் ஆகியவற்றை நாம் பார்த்தோம்.

இதிலிருந்து 356 என்று சொல்லுகின்ற அந்தப்பிரிவு எந்த எந்த வகையிலே கத்திபோல் இருந்து கொண்டு சில நேரங்களிலே கருத்தை அறுப்பதும், தேவைப்படுகிற நேரத்திலே காலிலே தைத்த முள்ளை எடுப்பதற்குப் பயன்பட வேண்டிய கத்தி உயிரையே பறிக்கின்ற அளவுக்கு, அறுக்கின்ற தொழிலைச் செய்கின்ற கத்தியாக இருப்பதை இன்றையதினம் நாம் பார்க்கிறோம். இவைகளுக்கு எல்லாம் ஒரு பாதுகாப்பைத் தேடுவது எப்படி என்பதற்காக சர்க்காரியா கமிஷன் என்று ஒன்றைப் போட்டு, ஒட்டுமொத்தத்திலே மத்திய மாநில அரசு உறவுகள் எப்படி இருக்கவேண்டும் என்பதை ஆராய்ச்சி செய்வதற்காகப் போடப்பட்டிருந்தாலும் — அது எந்த நோக்கத்திற்காகப் போடப்பட்டது என்பது பற்றிய விவாதத்திற்கு எல்லாம் நான் போகவில்லை — போடப்பட்டிருக்கிற நேரத்திலே ஒரு நீதிபதியாக இருந்த பெருமகனார் 109 கேள்விகள் அடங்கிய ஒரு பட்டியலை அனுப்புகிறார்; சாதாரணமானவர்களுக்கு அல்ல. ஆளும் பொறுப்பில் இருக்கிற பொறுப்பிலே இருந்து அனுபவப்பட்ட முன்னாள் முதலமைச்சர்களுக்கு அனுப்புகிறார். அப்படிப்பட்டவர்களுக்கெல்லாம் உங்களுடைய கருத்துக்களைச் சொல்லுங்கள் என்று 109 வினாக்கள் அடங்கிய பட்டியலை அனுப்பி வைக்கிறார்.

அனுப்பிவைத்துவிட்டு; பின்னாலே அவர் சொல்கிறார், நாலே நாலு முன்னாள் அமைச்சர்களும் (எஃபிடு அதர்ஸ்) மற்றவர்களில் சிலரும் மட்டுமே கருத்துச் சொல்லியிருக்கிறார்கள்; மற்றவர்கள் எல்லாம் கருத்து கூட சொல்லவில்லை என்று சொல்லுகின்ற அளவுக்கு இருக்கிறது. ஆக, மிகப்பெரியவர்கள் கூட இந்த மிகப்பெரிய பிரச்சனையை அலட்சியமாக எண்ணுகிறார்கள் என்று பார்க்கிறபோது நாமும் அந்த நிலைமைக்குப் போய்விடாமல் இந்த மன்றத்திலே விவாதித்து ஒரு நல்ல முடிவுக்கு வருவதன் மூலம் நாட்டு மக்களுடைய உள்ளங்களிலே இந்த உறவு பற்றிய பரிசீலனையை எழுப்புவதற்கு ஒரு வாய்ப்பினை அமைத்துக் கொடுத்தவர்களாவோம்.

இப்படி பார்க்கும் போது, சின்ன சின்ன காரியங்களிலே கூட மத்திய அரசு தலையிடுவது போன்ற உணர்வு ஒரு மாநில அரசுக்கு வந்தால் இந்திய ஒருமைப்பாடு பற்றி அவர்கள் விருக்குறி எழுப்புவார்கள், உதாரணத்திற்காகச் சொல்லுகிறேன். கூடு சம்பந்தப்பட்டவை இரண்டுக்கும் என்று இருக்கிறது. அதாவது கன்கரண்ட் லிஸ்டில் இருப்பவை வ.

மாநில மத்திய அரசுகளுக்குச் சொந்தமானவை என்று வந்துவிடுகின்ற காரணத்தினாலே, நீலகிரி மாவட்டம் போன்ற இடங்களில் ஒரு குடிதண்ணீர் தொட்டி கட்டுவதற்கு கூட, அதற்கு வந்து எந்தப் பாதை வழியாகக் குழாய் போட்டு கொண்டுவர வேண்டுமோ அல்லது குடிநீர் தொட்டியிலிருந்து பெரிய குழாயில் தண்ணீரைக் கொண்டுவர வேண்டுமோ அந்த இடத்திலே தோண்டுவதற்கு அனுமதி கேட்டு பல மாதங்கள் காத்திருக்க வேண்டியிருக்கிறது மாநில அரசு. ஆக ஒரு குடிநீருக்கு ஏங்கிக்கிடக்கிற மக்கள் ஒரு பக்கம். அந்த காட்டு வழியாக குழாய் வரவேண்டும் என்பதற்காக மத்திய அரசினுடைய அனுமதியைப் பெற மாநில அரசு காத்திருக்கின்ற மறுபக்கம் என்று சொல்லுகிறபோது மக்களுக்கு யார், யார்மீது கோபம் வரும்? அங்கே இருக்கிற விவரம் புரியாதவர்களுக்கு மாநில அரசு மீதும் கோபம் வரும். அப்படியானால் மத்திய அரசும் மாநில அரசும் இதற்கு ஒரு முடிவு காணவேண்டாமா? மக்களுடைய தேவையைப் பூர்த்தி செய்வதற்கு ரெட் டேப்பிசம் என்று சொல்லுகின்ற குறுக்கே கிடக்கிற காகிதக் கோப்புகள் அவர்களுடைய காரியத்தைக் கெடுக்கலாமா? என்பதைப் பற்றி சிந்திக்க வேண்டுமா வேண்டாமா?

இன்னொரு இடத்திலே பார்த்தால், மத்திய அரசிலே இருக்கிற அமைச்சர் ஒருவர் பேசுகிறார். காட்டிலாகா அதிகாரிகள் யாராவது இந்த இந்த வகையிலே நடந்துகொள்ளவில்லை என்றால் நாங்களே நேரடியாக நடவடிக்கை எடுப்போம் என்று பேசியிருக்கிறார். நாங்களே நேரடியாக நடவடிக்கை எடுப்போம் என்று மத்திய அரசு சொன்னால் மாநில அரசின் நிலைமை என்ன? மாநில அரசு 'குளோரிஃபைடு முனிசிபாலிட்டி' மாதிரி இருந்து கொண்டிருப்பதா? அதனுடைய அதிகாரம் என்ன? தன்னுடைய அதிகாரிகளைக் கண்டிப்பதற்கு இன்னொரு அரசாங்கம் முன் வந்தால் அந்த அதிகாரிகள் இந்த மாநில அரசுக்கு கட்டுப்பட்டு உட்பட்டு இருப்பார்களா அல்லது தண்டிக்கும் அதிகாரம் படைத்தவர்களுக்கு பயந்து அவர்கள் என்ன சொல்கிறார்கள் என்று கேட்டுக்கொண்டிருப்பார்களா? ஆக, இதை எல்லாம் பார்க்கும்போது சின்ன சின்ன காரியங்களில் கூட மத்திய அரசு தலையிடுகிறது என்ற ஒரு உணர்வு ஏற்படும்போது மாநில அரசுக்கு ஒரு கொந்தளிப்பு, ஒரு உள்ளக் குமுறல் எழுந்து இதைக் கேட்க வேண்டுமா இல்லையா?

ஒரு மாநில அரசினுடைய எண்ணம் என்ன என்று தெரியாமல் மத்திய அரசு முடிவுகளை எடுக்கிற நேரத்தில் அந்த மாநிலத்து மக்கள், அந்த மாநில மக்களைச் சேர்ந்த பல மக்கள் அவர்கள் எங்கெங்கோ வாழ்ந்துகொண்டிருக்கிறார்கள். எப்படி எப்படி துன்பப்படுகிறார்கள் என்பதற்குச் சான்று கச்சத்தீவு, இலங்கை இந்திய ஒப்பந்தம், ஸ்ரீமாவோ பண்டார நாயக்கர் ஒப்பந்தம் போன்றவை எல்லாம் தமிழ் மக்களுடைய உணர்வு, தமிழ் மாநில மக்களுடைய உணர்வு, தமிழ்நாடு மாநிலத்தில் வாழ்ந்து கொண்டிருக்கிற மக்களுடைய உணர்வு இவைகளை எல்லாம் கணக்கிலே எடுத்துக் கலந்துப்பார்த்துதான் செய்யப்பட்டதா? இந்த முடிவுகளை எப்படி எடுத்தார்கள்? வெளியுறவு என்று ஒன்றை வைத்துக்கொண்டு, மத்திய அரசின் கையிலே அதிகாரம் இருப்பதால், நாமே அந்த முடிவைச் செய்யலாம் என்கின்ற முடிவுக்கு வந்தார்களா?

கச்சத்தீவைப் பிரித்துக் கொடுத்தது இந்த மாநில அரசினுடைய எல்லைக்கு உட்பட்டதாகும். கச்சத்தீவு இராமநாதபுரம் ஜமீனுக்கு உட்பட்டது என்று நமக்கு குறிப்புகள் எல்லாம் சொல்கின்ற நேரத்தில் ஆண்டுகொண்டிருக்கிற அமைச்சரவையை — அது எந்த அமைச்சரவையாக இருந்தாலும் சரி — மக்களால் தேர்ந்தெடுக்கப்பட்டு ஆண்டு கொண்டிருக்கின்ற அமைச்சரவை இருக்கிற நேரத்தில் அந்த அமைச்சரவைக்குத் தெரியாமல் எடுத்துக் கொடுத்த காரணத்தால் மத்திய அரசு தன்னுடைய அதிகாரத்தைப் பயன்படுத்திக்கொண்ட காரணத்தால் இன்றைக்கு நம்முடைய நாட்டு எல்லைக்கே பேராபயம் ஏற்பட்டிருக்கிறது. ஆக வெளியுறவு என்று இருந்தாலும் இப்படிப்பட்ட காரியங்களில் முடிவு எடுக்கின்ற அதிகாரம் மாநில அரசைக் தெரிந்து எடுக்க வேண்டுமேயன்றி, மத்திய அரசு தன் போக்கில் எடுக்கவேண்டியதில்லை. மாநில அரசுக்கு தெரிவிக்க வேண்டிய கடப்பாடு இல்லை என்பதால், 'நோ அப்ஜெக்ஷன்' என்கிற காரணத்திற்காக அதைத் தூக்கிக் கொடுத்ததைப் பிற [illegible] அங்கே

இன்னொருவன் உட்கார்ந்துகொண்டு, படைப்பயிற்சி கொடுத்துக்கொண்டு தமிழனுடைய மார்பை நெருங்கி ஒப்பிரிக்கியை நீட்டிக் கொண்டிருக்கிறான். இப்படிப்பட்ட காரியங்கள் எல்லாம் நடந்து வருகின்றன.

ஆக, மத்திய மாநில அரசு என்று வருகிறபோது மத்திய அரசு சக்தி வாய்ந்ததாக இருக்கவேண்டுமென்றால் கூட இந்த சக்திக்காக வேண்டி ஒக்கப்பூர்வமான புத்தியைக் கொடுப்பது மாநில அரசாக இருக்கிற அளவுக்கு என்ன உறவுகள் இருக்க வேண்டாமா? இந்த உறவுகள் இருந்திருக்குமானால் இந்த குழப்பங்கள் வந்திருக்காது அல்லவா? இன்னின்ன காரியங்களுக்குப் பாதிப்பு படுத்தக்கூடாது என்ற ஒரு உத்தரவாதமாவது அப்போது சேர்த்திருந்தால் இந்த மாநில அரசினுடைய, இந்த மாநில மக்களுடைய உணர்வையாவது அது பிரதிபலிப்பதாக இருக்கும் அல்லவா? இவைகளினால் ஏற்பட்ட குழப்பங்களையெல்லாம் இப்போது அதிலிருந்துப் பார்க்கிற நேரத்தில் மீண்டும் ஒரு முறை இந்த மத்திய மாநில அரசு உறவுகளை, அங்கே சீர்தூக்கிச் சீர்தூக்கிப் பார்க்கவேண்டியிருக்கிறது. திராபைலஸ்லியல் சிலேட்டைப் பற்றி சொல்லுதைப் பார்த்தால், அவர்களுக்கு சகல அதிகாரமும் இருக்கிறது. இங்கே உழுவவன் எங்கே இருக்கிற உழவனாக இருப்பான். பாடுபாடு பாடுபடுவன் இங்கே உள்ள பாட்டாளியாக இருப்பான். அவனுடைய விளை பொருள்களுக்கு விலை நிர்ணயிக்கிற உரிமை, அந்தப் பகுதியில் இருக்கிற மன்றுக்கும், அந்தப் பகுதியில் உள்ள மக்களுக்கும், அந்தப் பகுதியில் உள்ள மக்களுடைய உழைப்புக்கும் ஏற்பவை அல்ல. நெல்லினுடைய விலையை அங்கு இருக்கிறவர்கள் மட்டுமே நிர்ணயிக்கிற போது என்ன ஆபத்து வருகிறது, வெள்ளைக்காரர் காலத்திலே நாம் சொல்வோமே; "ஏறான் மறான் தோட்டத்திலே ஒழுத்தன் போட்டான் வெள்ளரிக்காய், காசு காசுக்கு விற்கச் சொல்லி காகிதம் போட்டான் வெள்ளைக்காரன்" என்று — அதைப் போல் இங்கே இருக்கிற சூழ்நிலைகளை மொத்தத்தில் கணக்கில் கொள்ளாமல் — நம்முடைய உணவுத் துறை அமைச்சர் கூட இன்று பேசுகிறபோது சொன்னார் — இங்கு இருக்கிற விவசாயிகள் உற்பத்தி செய்கின்ற நெல்லுக்கு ரூ.175.5 கொடுக்கவேண்டுமென்று நாங்கள் விரும்பி கேட்டுக்கொண்டிருக்கிறோம். ஆக ஒத்துக்கொள்வார்களா? அல்லது ஒத்துக்கொண்டிருக்கிறார்களா? நெல்லுக்கு எப்படி விலையை நிர்ணயிக்கிறார்கள். சரி.,

நெய்வேலியிலிருந்து ஒரு தகவல் வருகிறது நமக்கு. நெய்வேலி லிக்னைட் கார்ப்பரேஷன் மத்திய அரசாங்கத்தைச் சார்ந்தது. மத்திய அரசாங்கத்தைச் சார்ந்த நாடாளுமன்ற பெருமகனார் சொல்கிறார் ரூ.78கோடி தமிழக அரசாங்கம் மின்சாரத் துறையிலே எங்களுக்கு பாக்கி வைத்திருக்கிறது என்று மின்சாரத்தை நாங்கள் கொடுத்த காரணத்தினால் ரூ.78 கோடி பாக்கி இருக்கிறது என்றும் எப்படி இவ்வளவு பாக்கி வந்தது? 1955-லே நெய்வேலி நிலக்கரி சுரங்கம் தோண்டுகின்ற நேரத்தில் கூட இங்கே தோண்டி எடுக்கின்ற நிலக்கரியை விற்பனை செய்கின்ற அதிலிருந்து வருகின்ற அந்த விற்பனையில் 10 சதவீதத்தை உரிமமாக ராயல்டியாக தமிழ் மண்ணிலே இருந்து வெட்டி எடுக்கின்ற காரணத்தால் தமிழக அரசாங்கத்திற்கு கொடுக்கவேண்டும் என்று சொன்னார்கள். லட்சக்கணக்கான டன்கள் வெட்டி எடுக்கப்பட்டுவிட்டதே. இன்று ஒரு காசு கூட ராயல்டியாக வாங்கவில்லையே, உரிமம் வாங்கவில்லையே ஆகவே பேச்சு வார்த்தைகள் நடந்ததிலே தமிழக அரசுக்கு வரவேண்டிய அந்த உரிமத்தை வாங்காது இருப்பதற்கு என்ன காரணம்? சரி அது கொடுக்காமல் இருந்து விடு, எங்களுக்கு ரூ.78கோடி பாக்கி இருக்கிறதென்று மத்திய அரசாங்கம் சொன்னால் மாநில அரசாங்கத்தின் இந்தியாவின் ஒரு பகுதியாக தானே கருதவேண்டும். சரி என்றென்று வைப்போம். இந்த மின்சாரத்திற்கு இவ்வளவு கட்டணம் வருவதற்கு என்ன காரணம்? தூத்துக்குடி சென்னையில் எண்ணூர் அனல் மின்நிலையங்கள் அதிகமாக செலவிட்டு உற்பத்தி செய்கின்றன என்றால் நிலக்கரி உற்பத்தியாகின்ற இடத்திலே ஒரு டன்னுக்கு ரூ 250 அதைத் தூத்துக்குடிக்கு கொண்டு வர ஆகும் செலவு ரூ 375. டிரான்ஸ்போர்ட்டேஷன் சார்ஜ் ரூ.375 ஆக ஒரு சின்ன வேண்டுகோளை விடுகிறேன். மத்திய அரசாங்கத்திடம் அதிகாரம் இருக்கிற காரணத்தாலே சிமெண்ட் விலை நிர்ணயித்து இந்தியா முழுவதும் சிமெண்டுக்கு விலை ஒரே தான் என்று சொல்லியிருக்கிறீர்கள். மத்திய அரசாங்கத்திடம் அதிகாரம் இருக்கிற காரணத்தாலே இரும்பு விலை நிர்ணயித்து இந்தியா முழுவதும் இரும்பு விலை ஒரே தான் என்று நிர்ணயிக்கிறீர்கள். நான் கேட்கிறேன், நிலக்கரி விலையை நிர்ணயித்து இந்தியா முழுவதும் ஒரே தான் விலை.

என்று சொல்லிவிட்டால், மாநிலத்திற்கு மட்டும் போக்குவரத்து செலவு அதிகம் கொடுக்கவேண்டி வராது அல்லவா? ஆகவே உங்களுக்கு விருப்பமான பொருள்களுக்கு மட்டும் தனி மத்திய அரசாங்கத்தின் விலையை நிர்ணயித்துக்கொண்டு மற்றவைகளுக்கு விருப்பம் போல் விட்டுவிட்டால் ஒரு ஒழுங்காக ஒரு வரன்முறையாக இல்லாமல் போய்க்கொண்டிருக்கிறது.

அதே போல் நான் முன்பு பேசிய பெருமக்கள் இங்கே சுட்டிக்காட்டினார்கள். சுங்க வரியைப் பொறுத்தவரையில், வரியிலே இவ்வளவு என்று மத்திய அரசாங்கம் எடுத்துக் கொள்கிறது ஒரு மாநில அரசாங்கம் மத்திய அரசாங்கத்தினுடைய சார்பிலே அல்லது மத்திய அரசாங்கத்திற்காக வசூலிக்கின்ற வரியிலே 29 சதவீதத்தை வைத்துக்கொண்டு மீதத்தை எல்லாம் கொடுத்துவிடுகிறது. நான் மொத்தமாகச் சொல்கிறேன். மத்திய அரசாங்கத்தின் சார்பிலே வசூலிக்கின்ற வரிகள் அந்த அளவும் வசூலித்து எடுத்துக்கொண்டு மீதியை எல்லாம் மத்திய அரசாங்கத்திற்கு கொடுத்து விடுகிறது. ஒரு வரியிலே 29 சதவீதம். ஆனால் செலவில் மாநில அரசாங்கத்திற்கு 51 விழுக்காடு ஏற்படுகின்றது. வரவிலே 29 சதவீதத்தை மத்திய அரசாங்கம் ஒத்துக்கொள்ள, செலவிலே மட்டும் 51 சதவீதத்தை மாநில அரசாங்கம் ஏற்றுக்கொள்ள வேண்டுமென்று சொல்கிறபோது தேவையான மீதப்பணத்திற்கு மத்திய அரசாங்கத்திடம் கை கட்டி நிற்கவேண்டிய நிலை உருவாகிறது. அப்படி உருவாகுகின்றபோது இங்கேயிருக்கின்ற சிலருக்கு மனம் நோகுகிறது. மனம் நோகுகிறது, மனம் ஏன் நோகுகிறது என்றால் இந்தப் பகுதியிலே இருக்கின்ற மக்களுக்கு நான் தொண்டு செய்யவேண்டும் என்று நினைக்கிறபோது, அந்த நேரத்திலே அந்தப் பக்கமோ கை நீட்டவேண்டிய நிலையிலே இருக்கிறதே என்றும் நினைக்கிறார்கள். இந்த நிலையை மாற்றி அமைப்பது எப்படி என்பதற்கு இந்த மத்திய மாநில உறவுகளை பரிசீலிக்க வேண்டும் என்பதோடு, மாநிலத்திற்கு அதிக அதிகாரம் தேவைப்படுகிறது என்பதையும் நாம் கூற வேண்டும். சில இடங்களிலே நாம் பார்க்கிறோம். திறமையாளர்கள் தண்டிக்கப்படுகிறார்கள். திறமையாக காரியம் நடைபெற்றுக்கொண்டிருக்கிறது என்று சொன்னால், மேலும் மேலும் உனக்குத் தொழில் எதற்கு என்று கேட்கிறார்கள். மேலும் மேலும் தொழில் உனக்கு எதற்கு என்று கேட்கிறபோது, இவருக்கு மனச்சங்கடம் ஏற்படுகிறது. உதாரணமாக சென்னையிலே போட்டோ பிலிம் தொழிற்சாலை இருக்கிறது அதை விரிவாக்கம் செய்யவேண்டும் என்று சொன்னால் எங்களவே அங்கே நோட்டறள் ( ) இருக்கிறது. அனுபவப்பட்டவர்கள் இருக்கிறார்கள். நல்ல சீதோஷ்ண நிலை சென்னையில் இருக்கிறது. அந்தத் தொழிற்சாலையை விஸ்தரிக்கின்றபோது, சில கோடி ரூபாயில் பல கோடி ரூபாய் மதிப்புள்ள மூலதனத்தை அங்கே கொண்டு வந்து விடலாம். உற்பத்தியை அங்கே கொண்டுவந்து விடலாம். ஆனால் அதே நேரத்தில் என்ன செய்கிறார்கள். வேறொரு இடம், பின் தங்கியிருக்கிறது என்ற காரணத்தால், அது அங்கே கொண்டு போகப்படுகிற நேரத்திலே இங்கே திறமை தண்டிக்கப்படுகிறது. ஆற்றல் தண்டிக்கப்படுகிறது. அந்தத் திறமையும் ஆற்றலும் தண்டிக்கப்படுகிற நேரத்தில், மாநிலத்தில் இருப்பவர்கள் என்ன நினைக்கிறார்கள். நம்முடைய திறமைக்குக் கிடைத்த பரிசா இது என்று. மத்திய அரசாங்கம் இப்படிச் செய்யலாமா என்று சொல்கிறபோது ஒரு பெருமூச்சு ஏற்படுகிறது. இந்த பொருமல் ஏற்படாக்கூடாது என்பதற்காகத்தான் பஞ்சாப் போன்ற இடம் இருக்கிறது என்று வையுங்கள், அந்த பஞ்சாபிலே உற்பத்தி அதிகம். மேலும் உற்பத்தி செய்வதற்கு வழிவகை செய்து கொண்டே போகிறோம் என்று வையுங்கள் மேலும் மேலும் வளம் கொழித்துக்கொண்டே போகிறது என்று வையுங்கள். அவர்களும் என்ன நினைக்க வேண்டும் இந்தியாவிலே நானும் ஒரு பகுதி. நான் உற்பத்தி செய்ததை வைத்து என் மக்கள் நன்றாக வாழ்ந்ததற்குப் பிறகு இந்திய திருநாட்டுக்கே பொதுவாக கொடுப்பேன் என்று என்னால் இவ்வளவு தூரத்திற்கு நான் வந்துவிட்டேன். இவ்வளவு செழித்து சிறந்துவிட்டேன். நான் எதற்கு இனிமேல் மத்திய அரசாங்கத்திற்கு கட்டுப்படுவது என்று ஒரு மாநில அரசாங்கம் நினைத்தாலும், இந்திய ஒருமைப்பாட்டுக்கு ஆபத்து அந்நிலையிலே நான் வளர்ந்துவிட்டேன், கட்டுப்படமாட்டேன் என்று எண்ணக்கூடிய அளவுக்கு ஒரு மாநில அரசாங்கம் போய்விட்டால். நாம் இங்கே எந்நாள் வரை முடியாது. போலும் என்ற எண்ணத்திற்குப் போய் இந்திய ஒருமைப்பாட்டுக்கு விரோத

-மான சிந்தனை வந்துவிடக்கூடாது இந்த இரண்டுக்கும் இடையிலே நமக்கு என்ன என்ன அதிகார
ம் தேவை, அந்த அதிகாரத்தை எப்படி பரவலாக்குவதற்கு உள்ள முறையை எப்படி உரு
வாக்குவது என்பதற்காக மாநிலங்களுடைய முதலமைச்சர்களையும் பிரதமர் அழைத்துப் பேசி
இந்த இரண்டையும் பேலன்ஸ் செய்கின்ற வகையில் இந்திய ஒருமைப்பாட்டுக்கு உத்தரவாதமே இல்லா
மல் அந்தந்த வளர்ச்சிக்கு தடையே இல்லாமல் அங்கங்கள், நன்றாக இருந்தால் தான் தங்க
திகர் உடம்பு நன்றாக இருக்குமென்பதை மறந்துவிடாமல்

ஏற்ப வளர்ச்சி பெற்று அதற்கு ஏற்ப வலிவோடு இருந்தால் தான் உடம்பு
வலிவோடு இருப்பதைப் போல இருந்தால் தான் உடம்பு வலிவோடு இருப்பதைப் போல

மாநிலங்கள் செழுமையாகவும் செழிப்பாகவும், வளமாகவும் வலிவாகவும் இருந்தால்
தான் மத்திய அரசு பலமாக இருக்க முடியும் என்ற சொல்லுகிற அந்த ரீதியில்
அடிப்படையிலே, இந்த உறவை நிர்ணயிப்பதற்காக எல்லா மாநிலங்களுடைய
முதலமைச்சர்களுடைய, யூனியன் பிரதேசங்களை ஆள்கின்றவர்களை அழைத்து,
பாரதப் பிரதம மந்திரி பிரதமர் அவர்கள் பேசவேண்டும் என்று வலியுறுத்துகின்ற
இந்தத் தீர்மானத்தை ஆதரித்து வலியுறுத்தி காந்தி காமராஜ் தேசிய காங்கிரஸ்
சார்பிலே என் கருத்தை முடித்து அமர்கிறேன்.

4. OTHER PARTIES/GROUPS

ACTION OF COMMITTEE OF NORTH-EAST REGIONAL PARTIES' CONFERENCE

MEMORANDUM

RESOLUTIONS

1. The Constitution of India should immediately be amended to make it truly federal.
2. All other subject and except Defence, Currency, Foreign Affairs communications should remain with the States.
3. The Concurrent List of the Constitution should be deleted.
4. All resources accruing from all areas of the country should go to the respective States.

A commission should be appointed to assess the requirements of the Centre and fix the quantum of contribution to the centre by each State according to their capacity.

5. The President and the Governors should have no power to appoint or dismiss a ministry save in accordance with the will expressed by the Legislature.
6. Each State will have equal representation in Rajya Sabha and powers and functions of the Rajya Sabha should be increased.

ASOM JATIYABADI DOL

MEMORANDUM

The arrangement made under the constitution for distribution of power between the Centre and the States is improper and inconsistent with a true federal polity. Excessive and unfettered power has been given to the Centre over the States; so much so that the States, the federating partners, have now come to be treated as more vessals of the centre. Whatever little autonomy the States were left with has also been eroded through misuse of constitutional provisions by those in authority in the centre. The consequence is that the states are now unable to manage their own affairs without the centre's aid and approval, Developmental works and economic growth have suffered; feelings of ill-treatment, neglect and insecurity have led to aggravation of social tension. No wonder that all this has, over the years, given rise to increased conflicts, strains and stresses between the centre and the states. The need, under the circumstances, for a review of the centre-State relationships has long been overdue.

It is, therefore, highly welcome that the centre has not set up a Commission headed by Justice R.S. Sarkaria to make an in-depth study of the centre-state relations and to make recommendations for their improvement. The move has naturally aroused great expectations among different sections of the public; it is believed that the Commission's recommendations would be instrumental in bringing about a healthy and harmonious relationship between the centre and the States.

The Asom Jatiyabadi Dol, a regional Political Party based in Assam, has its own views and suggestions on the issue in question and, therefore, submit this memorandum to the Commission.

The Dol is of the opinion that to improve and ensure a better and healthy centre-state relationship adqeuate measures must be taken to remove the present sense of helplessness and consequent antagonism of the State against the centre. The States must be provided with more autonomy. They must be given more powers and resources to enable them to manage their own affairs and develop in accordance with the social, economic, linguistic and cultural needs of their perople. Provisions also must be made to secure the states against centre's undue pressure, interference and threat of dismissal of their governments. The fears and anxieties of the smaller racial and linguistic groups inhabiting the states concerning their identity and distinctiveness must also be allayed.

Although the Asom Jatiyabadi Dol firmly believes that nothing short of a 'total autonomy' could succour the states like Assam from the poor and pitiable plights they are now placed in, and thus establish a healthy, harmonious and satisfactory relationship between the centre and the states, It is well aware of the limitations of this commission. The Dol understands that to give 'total autonomy' to the states would require complete overhauling of several of the provisions of the Constitution. The whole concept of the centre-State relationship would then undergo a major change. Unfortunately no such major change can be expected from the recommendations of this Commission. The Dol, therefore, thinks it wise to refrain from submitting any suggestions dealing with 'total autonomy' of the states, and reserves the same for the future, to be taken up with a appropriate forum and in a appropriate time. As of now, it confines its suggestions to the possibilities of the present occassion, with the hope that the excercise of the Commission would at least lead the States one step nearer to fuller autonomy and help in lessening the present conflict and tension between the centre and the states.

Views and Suggestions

As hinted above, devolution of more powers and more autonomy to the states is imperative for any improvement in the centre-state relationships. This can only be done through amendments of the Constitution by way of additions, alterations, substitutions and repeals. The Asom Jatiyabadi Dol suggestes that :

1. Atricles 5 to 11 and other relevent provisions of the constitution should be suitably amended to establish a system of Dual Citizenship. Under this system a person shall be a citizen of the State in which he resides, and also a citizen of the country i.e. India. Provisions should be incorporated

empowering a state to grant some specific political and economic rights to its citizens which would be denied altogether or granted on difficult terms to non-resident of that state. This would help protect the historically recognised linguistic and racial minorities like the indegenous people of Assam and of the north eastern region from political, economic and cultural exploitation of the more dominant and adventurous groups and races of other states and countries. This would also remove the rears and anxities of these minorities as to their indentity and existence.

2. Article 81 which deals with the composition of the House of the People (Lok Sbbha) should be suitably amended to give better representation to the smaller states, if they are to feel themselves as equal federating partners of the union. At present, out of 525 members contributed by the states, as many as 360 (68·6%) are from the six bigger states, 120 members (22·9%) are fron five medium sized states, the other ten smaller states contribute only 55 members (8·5%). Such a lop sided scheme of representation can never promote smooth centre-state relationships. Therefore, to narrow down the gap between the bigger states and the smaller states the maximum and minimum number of members that a state can contribute to the House of the people should be laid down. The Dol suggests that no state shall be represented by more that 50 members and no state shall be represented by less than 10 members.

Similarly, the maximum number of members from an union territory shall be 10 and the minimum number 5.

3. Article 80 which deals with the composition of State (Rajya Sabha) should, for the same reasons stated above, be amended to ensure that every state is represented therein equally.

4. Articles 3 which empowers the centre to form a new State, to increase and diminish the area of a State, to alter the boundary or the names of a state without the concerned state's concurrence, and thus enables the centre to directly infringe nto the preserves of the states, should be suitably amended to ensure that the area and name of a State cannot be altered or changed without the express concurrence and approval of the State legislature concerned.

5. Article 249 which empowers the centre to legislate on subjects contained in the State List in the 'national interest', also enables the centre to directly encroach upon the autonomy of the state and, therefore, should be deleted.

6. Article 347 which gives power to the centre to change the official language of a state without the concurrence of the concerned state should, for the foregoing reasons, also be amended to ensure that the official language of a State cannot be changed without the express concurrence and approval of the state legislature concerned.

7. Article 153 which deals with the appointment of Governor of a State should be amended. The method of appointment of the head of the State Executive by the Union Executive is repugnant to the federal system. Experience has shown that nominated Governors connot be free from pulls and pressures of politics. Governors also have much to do with the present strife and tension between the centre and the states.

The Article should be redrafted to provide that the Governor, in the manner of the President, be elected by the State Legislature. Provisions should also be made to ensure that the Governor has no more powers than envisaged for the President of India under Article 78.

8. Articles 200 and 201 which empower the Governor of a state to withhold assent to Bills Passed by the State legislature and reserved the Bills for consideration of the President, should be amended to make it obligatory for a Governor to assent to a Bill passed by the State Legislature for any of the subjects contained in the State List, However, the Governor may refer a Bill which has been passed and subsequently reconsidered by the legislature to the High Court having jurisdiction if in his opinion such a Bill is against the provision of the Constitution. This would ensure supremacy of the State in the matters of its own domain.

9. Article 356 and 357 which empower the President to issue proclamation for dissolution of the State governments and the state legislature or both on the ground that "the government of the state cannot be carried on in accordance with the provisions of his constitution" should be deleted. As in the case of the centre, provision should be made, in the event of a failure of constitutional machinery in any state, for holding election and forming a new government. This would be in conformity with the federal prinicple.

10. Article 360 which empowers the President to make a proclamation on the ground that the Financial Stability or credit of India or any part of the territory thereof is threatened and enables the centre to give directions to any state to observe cannons of financial propriety, is an interference in the autonomy of the state and therefore should be deleted.

11. Article 248 which gives exclusive power in the centre to make any law with respect to any matter not enumerated in the concurrent of State List in inconsistent with the principle of federation. To provide more autonomy and more power to the States this Article should be amended to the effect that the legislature of a State shall have exclusive power to make any law with respect to any matter not enumerated in the union or concurrent Lists. That is to say, the residuary powers should be vested in the states.

Accordingly Entry 97 of the Union List should be transferred to the State List.

12. Law and order should be made the exclusive domain of the state and no interference from the centre should be allowed. Suitable provisions should be made to ensure that the Central Reserve Police and other police forces of the centre cannot operate in the states.

13. Much conflicts and strife between the centre and states do arise and have arisen in the region of finance. The distribution of resources between the centre and the states as provided in the constitution has resulted in the latter getting for less than their due. The machinations of the centre, over the years, in matters relating to income tax, excise etc. have also adversely affected the states. The method of inter-state allocation of tax resources and grant-in-aid has not helped in any way to rectify the regional imbalances in resources, nor has it been adequate to enable the states to fully discharge their responsibilities. Again non-statutory or discretionary grants and loans, too, have been used not for correcting regional imbalance but for discrimination on political grounds. These discretionary grants and loans have alslo enabled the centre to infringe into and take control of spheres, in which, under the constitution, the initiative and control should remain entirely with the states. It is of utmost necessity, therefore, that there should be adjustment and reallocation of financial resources between the centre and the states and between the states themselves.

The Articles relating to the distribution of revenues should be suitably amended.

(i) to provide for 314 of the entire revenue collected by the centre from all sources for allocation to different states.

(ii) to entrust the Finance Commission with the task of derermining the principle and the proportion for allocation of th s $\frac{3}{4}$ of the entire central revenue betweem the states.

(iii) to make the Planning Commission a statutory body free from the control of the Central Executive, and

(iv) to make the National Development Council also a statutory body in which both the centre and the states will have representation.

14. Article 289(2) and (3) which empowers the centre to tax property and income of the States in certain cases should be deleted, as it is also an encroachment upon the autonomy of the states.

15. Article 302 which empowers the centre to put restriction on trade and commerce and intervene within a state should be deleted on the same ground as above.

16. As things stand now, the state has virtually no say in certain assets belonging to it. Relevant entries of the Seventh Schedule should be suitably reformulated to empower the state to prevent wastage of assets (like the case of petroleum gas in Assam), and to determine the royalty on all mining/wasting assets.

In view of the assumption of power in several states by parties different from the one ruling in the centre, the problem of centre-state relationships has acquired a proportion of considerable magnitude. While the above changes in the constitution would certainly go a long way in improving that relationships, what is also required is a centain amount of tolerance and a high standard of political behaviour on the part of those in power in the centre. The Asom Jatiyabadi Dol sincerely hopes that, apart from constitutional changes, the Commission would also give stress on this moral aspect of the problem.

BHARATIYA JANATA YUVA MORCHA

Goa, Daman, Diu

MEMORANDUM

Let us first take the opportunity to welcome the Commission set up under your august chairmanship to this beautiful land of Goa and sincerely hope that this visit of yours shall pave the way for better Centre-State Relationship.

We acknowledge the fact that the purview of your Commission is limited to Centre-State relationship; however in the best interests of Centre-State relationship it is of paramount importance that Goa is given the status of fullfledged state.

It may be recalled that our late Prime Minister Pandit Jawaharlal Nehru had assured Goans that the distinct identity of Goans shall be preserved within the Constitutional framework of India. Today the stage has reached wherein Goa should be granted statehood and by the inception of your Commission the process of Statehood has been accelerated.

Economy

As per the latest studies Statehood to Goa is an economically viable solution. If granted the statehood Goa shall be one of the states that shall be drawing proportionately lesser Central assistance compared to many of the existing states. With abundant mineral resources its, export potential, growing tourism and natural fisheries, Goa has an absolutely strong economic base. Our Industrial potential can be further increased if the powers regarding various industrial policy decisions are vested with local authorities which may be done on the attainment of statehood. Thus granting of statehood can accelerate the pace of industrialisation in Goa. Thus making it more economically viable and lessening burden to the Centre.

Educational Field

In the educational field the process of having Goa University has already begun, with about 25 colleges including all important professional colleges being affiliated to the same. However in order to have an agricultural varsity a technological institute the powers conferred on a Union Territory are insufficient. As such statehood can grant us sufficient powers to have all these institutes on Goan soil.

Social and Cultural Field

Our distinct identity has to be preserved and it shall add glittering colour to the entire necklace of Indian states if and only when Goa shall be granted statehood. As such a strong recommendation for the same in view of better relationship with the centre shall be of much assistance.

Language

The spoken language of Goan masses is Konkani. Due to foreign repression Konkani could never get its due and honourable place in Goa. Yet, after independence, Konkani has progressed a lot and its phenomenal progress has at last culminated into its recognition by the Sahitya Academy in 1975. Konkani has a distinct history and is widely spoken throughout South India. With a great historical background the language rightly boasts of earliest grammer and printing press amongst all other Indian languages. Thus statehood on linguistic basis can be decided in case of Goa by giving Konkani its Official status and acknowledging it as the sole official language of this territory.

Daman and Diu

The future of these two overlying pockets of Goa may be independently decided as its association with Goa is purely accidental and the territories cannot be administered from Goa which is miles apart from these places. All in all we feel Goans during old colonial regime were treated as third rate citizens and had therefore high expectations after attaining freedom but unfortunately we are yet to be treated as first rate citizens. This has given rise to despair and frustration against the Centre which may be washed off by granting fullfledged statehood and thus pave the way for better Centre State relationship.

Awaiting judicious right and prompt recommendations.

DEMOCRATIC SOCIALIST PARTY

MEMORANDUM

"We are in the midst of new movement for the conquest of self-government. It finds its main impulse in the attempt to disperse the sovereign power because it is realised that where administration organisation is made responsible to the actual association of men, there is greater chance not merely of efficiency but of freedom also". (Harold J. Laski—The Foundations of Sovereignty—p. 243).

Part I of the Constitution of India deals with the Union and its Territories. Article I describes name and territory of the Union, as India, that is, Bharat shall be Union of States. jurists, political scientists, political parties and the judges of the Supreme Court of India are of the unanimous view that India is a 'Federation of States'.

The most important requirement of a federal constitution is the distribution of the legislative power between the Union and the States. The Union and States should be independent of each other in their respective spheres. Both the Union and States derive their powers from the same source, that is, the Constitution. The well-known authority on constitutional law Mr. K. C. Wheare defines the Federal principles as : "the method of dividing powers so that the general and regional governments are each, within a sphere, coordinate and independent". Mr. A. V. Dicey, the well-known authority in his treatise 'Law of the Constitution' defines the essence of developed federalism as, "the supremacy of the Constitution—the distribution among bodies with limited and coordinate authority of the different powers and government—the authority of the courts to act as interpreters of the constitution". He further stated, "the distribution of powers as an essential feature of federalism. The object for which a federal state is formed involves a division of authority between the national government and the separate States. The powers given to the nation form in effect to many limitations upon the authority of the separate states, and as it is not intended that the central government should have the opportunity of encroaching upon the rights retained by the States, its sphere of action necessarily becomes the object of rigorous definition." Federalism postulates the distribution of governmental authority legislative, financial, executive and judicial between the union government and the State Governments.

The subject of Union-State relations has now acquired vital importance and has become crucial to the preservation of Unity and Integrity of India within the framework of the Constitution. The integrity and sovereignty of India must, however, emerge from a conscious effort towards harmonisation of the distincet liguistic, ethnic and cultural groups that inhabit our great country. Unity must mean harmony. It must reflect the totality of the multi-facet personality of India. Parliamentary democracy with a federal base can alone provide such a meaningful structure. The struggle for freedom from colonial bondage united them. That golden thread of unity created by freedom struggle still runs throughout the length nad breadth of India.

For the last two decades the States were making demand for greater powers, for making "States Autonomy" (the basic foundation of federalism) real, meaningful, purposeful and effective. Since the Congress Party was in power at the Union and the States, though there were muffled voices about federalism within the Congress Party, the State Governments were practicallly silenced. And as a result of party discipline, the State Governments had to carry out whatever the Union Government decided for them—including the abrupt and unceremonious change of Chief Ministers and the imposition of President's Rule even in Congress ruled States, (including the dissolution of elected legislatures). Then Janata Party came to power. It dismissed State Governments of the Congress Party and dissolved the State Legislatures. The Congress Party and Congress leaders suddenly realised that our Constitution is a federal one. But when the Congress Party was voted to powers in January 1980, the principle of federalism were given a go by and the Congress Government at the Centre repeated the performance of the Janata Party by dismissing several State Governments and dissolving the elected State legislatures.

The monopoly of the power of Congress Party has come to an end. Different political parties and regional parties are in office in different States and at the Union. This is most likely to be the future pattern of Indian Polity. Hence the relations between the Union and State have now assumed unprecedented significance and importance. Unless this aspect of the problem is properly understood in terms of

Indian reality and political sociology of changing political panorama of Indian life the forces of Unity and Integrity cannot be strengthened.

As soon as a demand is raised for a review of Union and State relations, some people, inspired or otherwise, become hysterical and argue that any review would affect national intergrity and unity.

It is relevant to point out that not long after commencement of the Constitution, the States Reorganisation Commission, had occasion to go into some of these questions. The report of the Commission was submitted in 1955; and some of the discussions in the report, more than a quarter of a century ago, indicated that the present inadequacies could be partly visualised by perceptive observers even in those days. Paragraphs 181 and 182 at page 52 of the Report read as follows :

181. "It is no doubt true that all the States of the Indian union are now dependent in varying degrees on central aid for development expenditure. However, we must not lose sight of the fact that excessive dependence on the Centre detracts from the federal principles since a real division of political power is not possible without an adequate separation of financial powers and resources. The balance of federal Union is bound to be disturbed if there are amongst its constituent units poor relations or mendicants, particularly if they are inclined to be extravagant". "If a federal system with any real independence in the State is to continue", says Sir Jhon Lathan, formerly Chief Justice of the Australian High Court, "the States must have financial resources under their own control reasonably adequate to their responsibilities".

182. "We are conscious of the fact that, with the growing need for administrative cooperation between the Central and State Governments. partial dependence of the State Governments, upon payments from the Centre, and the fact that the Central Govt. by use of the system of conditional grants, frequently promotes development in matters which are constitutionally assigned to the States, the concept of federalism is now everywhere undergoing a change. How much importance is to be attached to the Inter-State cooperation rather than to the strictly constitutional aspects of federalism will depend on the needs and circumstances of the time and the context in which this problem is being discussed."

There is no doubt that the time and circumstances have radically changed. Even in 1967 when the unfolding of events had not reached a critical stage, the study team of the Administrative Reforms Commission, on Union-States relationship headed by M.C. Setalvad, made observations about the anamalous relationship between the Union and States. In the introduction to the Report the Study Team pointed out :

"It is well to recognise that the politicol facts of the Indian scene have played a major role in the development of attitudes. Where a single party has control over affairs at the Centre as well as in the States an alternative and extra-constitutional channel become available for the operation of Centre-State relationship. In practice this channel has been very active during Congress Party rule and has governed the tenor of Centre-State relationships. The political network connecting central and State leadership was used amply to resolve conflict and case tension or even to postpone consideration of incovenient issues. In the process the Constitution was not violated, at least not deliberately or demonstrably, but often by passed. Besides, political rather than administrative considerations determined decisions and the Centre's relationship on the personality of its political leaders and their equation with the central leadership. Constitutional provisions went into disuse and disputes were settled in the Party rather than aired through open constitutional machinery."

The Study Team had only discussed the problem partially. The terms of reference confined the Team to administrative relationships. The political reality was much more disturbing. Ten years before this study was made a communist government had been returned to power in Kerala in a general election. It disturbed the complacency of the Union Government to such an extent that the basic federal character of the Indian Polity was lost sight of. A short-Shrift through improper use of the Union Government's powers partially restored the sway of the Congress Party in Kerala. While the approach to States ruled by the Congress party in certain cases were extra-constitutional as pointed out by the Setalvad Study Team, approach to States ruled by the opposition also unfortunately became extra constitutional in certain matters. The Union Government under the Constitution enjoys enormous powers to control the functioning of the State governments. Partisan and manipulative exercise of the administrative, legislative and financial powers given under the Constitution could always enable the Union Government to destabilise any State administration. Such instances were not rare. But there was no guarantee under the Constitution to prevent such manipulative exercise of power. State were completely helpless, if as a result of divergence in political views the Union decided to use the levers of power to undermine the effectiveness of such State governments. In the long run the national integration becomes the victims of such partisan approach. This situation warrant appropriate changes in the Constitution so that the constitutional structure itself provided for a healthy inter-play of political forces in a system which is bound henceforward to be multi-party in character.

Setalvad Study Team recognised the need for adjustments more than 15 years ago when the problem had not assumed such disturbing proportions. In its introduction to the Report the Team commented :

"From the constitutional angle the situation was abnormal. As a result of bypassing normal constitutional processes a habit of settling issues through extra-constitutional means grew and sufficient experience and a proper climate for settling them through the regular process were not developed. The emergence of non-Congress governments in the States accordingly forced the problem to the forefront for the earlier devices are no longer available."

The study team further mentioned

"In a few years as this experience is assimilated difficulties presented by its sheer unprecedentedness should be gradually solved by proper adjustments in response from the body politic."

The political response in subsequent years did not reveal any intent to allow the federal machinery to adopt itself to the changing political situation. The compulsions of socio-economic planning against the background of alarming population growth, growing demand for employment, absence of social security measures in the face of continuous price rise, have further complicated the position. The complete control exercised by the Union Government over all aspects of economic activities, gives it a primacy & status, which is not consistent with their responsibilities given to the State governments under the Constitution. It is this imbalance which needs to be redressed if sustained socio-economic growth is to be ensured.

Shri B. N. Rao, Constitutional Adviser to the Constituent Assembly in the introduction to the first edition of the book in Constitutional Precedents (Second Series) wrote :—

"The Weimar Constitution of Germany is representative of the numerous European Constitutions that cropped up soon after the First World War and contains various instructive provisions. Acclaimed at the time as one of the best efforts at Constitution making it failed to fulfil any of the great expectations of its framers. Instead, it has served to be at once a lesson and a warning that the success of a Constitution depend, not upon the excellence of the written instrument, but upon whether it is suited to the genius of the people for whom it is made."

Some of the intellectuals have expressed apprehensions that if there is to be a further devolution of powers from the Union to the States, Union might become weak and if the reactionary forces in the States get hold of power the Union would feel helpless to deal with such a situation. These apprehensions felt by these very sincere scholars is based on a false presumption that the Union is likely to be more progressive than the State governments. It may be some of the regional parties which are now emerging can be reactionary but not all. In fact some of them are more a protest movements rather than political instruments. With all the enormous powers the Union wield under the Constitution if a reactionary party captures power at the Centre then the very Constitution can be used as Hitler used Weimar Constitution. The strength of the democratic institutions lies in the consciousness of the democratic forces. The capitalist path of development now being followed by the Congress (I) in total violation of and utter disregard to the objectives stated in the Preamble and Directive Principles of Constitution at the Union level–concerntration of economic power, growth of monopoly setting into motion the forces of anti-growth and stagnation, startling economic disparties, unemployment, uneven economic development (all results of capitalist path of development) are the real disintegrative forces of Indian polity resulting in uneven economic development of various regions and creating a colonial economic relationship between one part or region or State with other parts of India. To protect and strengthen the unity of Indian political forces have to be generated to revesre this economic process and initiate necessary corrective steps. In that context the States would certainly play an important role. Hence a review of Union and State relations is called for.

Only harmony between the Union and the States, based on the foundations of principles of federalism would further lead to a greater unity while preserving the dignity and freedom of action within a given sphere of the States. There cannot be a strong India without well developed and strong States. With respective spheres of authority clearly marked out, strong States would add strength to the Union and weak States would only weaken the Nation.

In the words of Prof. Sawyer : "The sub-continent of India was another area which by reason of size, population, regional (including linguistic) differences and communication problems presented an obvious federal situation."

The 1935 Govt. of India Act, which came into force in 1937, provided certain basic features of federalism. The Constituent Assembly in framing the Constitution of India, followed to a large extent, some of the basic features of the 1935 Act. Thus Indian Constitution was meant to be a federal one. But in the working of the Constitution of India some of the unitary features have emerged dominantly as a result of one-party rule.

The present position is as was stated by Shri Rajamanner's Committee :

"Though the Constitution set up a federal system, it must be admitted that there are several Provisions which are inconsistent with the principles of federalism. There are unitary trends and in the allocation of powers, there is a strong bias and tilting of the scales in favour of the Centre. In a federation, the national and the State government exist on the basis of equality and neither has the power to make inroads on the definite authority and the functions of the other unilaterally. In India, however, the national government is vested with powers on certain occasions to invade the legislative and executive domain of the State. There is a theme of subordination running right through the Constitution. There is a large scope for the Centre to intrude into the State affairs and thus affect the autonomy of the States. There are certain provisions in the Constitution, which appear to confer on the Union Government supervisory power over the States even in well-defined and specified matters which are exclusively in the State field."

Hence the need for review Union-State relations has become imperative and the appointment of Sarkaria Commission is itself an unambiguous recognition of the need for such a review.

But the way the Commission is constituted and the terms of reference are formulated without consultation with the States, would certainly make one feel that the Union Government is not keen about a purposeful review of Union and State relations but this Commission is meant to act as a

diversion as the British Royal Commissions. The motives of the Central Government do not seem to be honourable.

The relations between the Union and States can be broadly classified as follows :

(1) The Legislative, (2) the Administrative, and (3) the Financial Relations. It is beyond dispute that the subjects such as defence, foreign relations, currency, economic planning, banking, insurance, oil fields and minerals, exports and imports should be exclusively under the control of the Union Governments. A committee must go through all the three lists *i.e.* Central, State and concurrent list and make a proper rearrangement.

Article 370 : All attempts to amend this Article should be prevented. Special status of Jammu and Kashmir should not be disturbed.

Legislative Relations

Article 31-C and the Directive Principles of the Constitution

Under Article 31 C the Parliament can pass law to give effect to the policy of the State for securing all or any of the Directive Principles laid down in Part IV of the Constitution. If there is a declaration that the law is meant for implementing such policy, such a law will be valid notwithstanding any abridgement of Article 14 or 19. If a legislature of a State seeks to pass any law for the purpose of implementing Directive Principles of Constitution, in terms of Article 31 such law has to be reserved for the consideration of the President and his assent. Until the law receives the assent of the President it cannot come into force. This is an anomalous situation. The State legislatures should have same privilege and power as the Parliament in this regard. Consideration and assent of the President should not be required. Article 31 C should be suitably amended to enable the State legislature to make laws for implementation of the Directive Principles of Constitution without delay.

Entry No. 97 Union List

1. **Article 248—Residuary Powers :** The residuary legislative power is vested in the Parliament, and the State legislatures cannot exercise residuary powers, which they could under Section 104 of the Government of India Act 1935. The American and the Australian constitutions provide for the exercise of residuary powers by the States. It will be in the interest of the smooth functioning of the Indian polity, having a regard to the unity in diversity, if the residuary powers are allowed to be exercised by the States.

Except in times of war and national peril the residuary powers of legislation conferred by Article 248 and residuary power of taxation conferred by Entry No. 97 of the Union List should be vested in the State Legislatures. Hence Article 249 should be accordingly amended.

Directions which can be given in pursuance of the executive powers of the Union to the States should be given only in consultation with the Inter-State Council under Article 256.

Article 249 : Parliament to make laws in respect of matter specifically included in the State List :

Article 249 can be invoked with the aid of the resolution passed by the Council of States by two-third majority that it is necessary or expedient that the Parliament should make laws. This is in total violation of the basic principles of federalism. The Union can easily invade the jurisdiction of the State, if the political party ruling at the Centre can command two-third majority in the Council of States. Hence this Article should be deleted.

Article 252 : If two or more State legislatures desire that the Parliament should make law relating to the subjects in List two, the Parliament can pass law regarding subjects in List No. 2 and the Parliament alone will have the power to amend but not the State Legislature to which it applies.

The State Legislature which had passed a resolution enabling the Parliament to make laws should have the power to either amend or to repeal. Hence Article 252 should be suitably amended.

Article 200 : Under this Article the Governor can reserve the Bill passed by the legislature of the State for the consideration of the President and the Governor shall not assent to any Bill and is bound to reserve for the consideration of the President if that Bill in his opinion, if it becomes law, derogate from the powers of the High Court as to danger its position which that Court by the Constitution is designed to fill. Except the Bills of that nature that affect the powers of the High Court, the Governor should not have the discretion to reserve the Bill for the consideration of the President. The Article 200 should be suitably amended. Under Article 200 no time limit is prescribed for Presidential consideration. Any Bill can be put in cold storage. As the President is bound to act under Article 74 on the advice of Council of Ministers and since he has no options at all the legislative powers of the State can be easily interferred with by the use of Presidential veto. In other words both in theory and practice the legislative process of the State legislature in certain respects are subordinate to the supremacy and subject to political convictions or prejudices of the Union Executive. Most Governors owe their loyalties to the ruling party at the Centre as most of them are party men or obliged to the Party in several ways. They are always chosen mainly to watch the political developments or even to manipulate developments some time. Hence it is very difficult to accept that the Governor's act on the advice of Council of Ministers of the State. There had been occasions when even some Congress ministers in States used to feel exasperated at the indifference of the Centre, regarding bills passed by their respective legislatures and used to remark 'save us' from Delhi socialism'. These bills mainly dealt with welfare measures which were far more progressive than the legislation initiated by the Union Government. When a State legislature passes a bill it need not be sent for the assent of the President. If there is any violation of Constitution judiciary can deal with the matter, instead of allowing a political judgement of political prejudices to prevail. Hence this article should be amended. Speaker's certificate that the Bill had been passed should be enough for the law to come into force

or the Governor should act on the advice of the Council of Ministers as the President does under Article 74.

Emergency

If the President is satisfied that grave emergency exists and the security of the country or any part there of is threatened by war or external aggression or internal disturbances he may declare emergency by proclaimation. Thus there are two types of emergency (a) External, (b) Internal. While the Union Government should have the power to declare external emergency, the provisions regarding internal emergency are to be formulated in the light of the experience of emergency in 1975.

Financial emergency under Article 360 should be promulgated only after the matter is placed before the Inter-State Council.

Article 360 has not been invoked so far. Financial instability can be the result of mismanagement of economy by the Union Government and in such a case of emergency the States pay the penalty. This is an anmolous position regarding the financial emergency. Hence placing the proposal for financial emergency before the Inter-State Council is aboslutely necessary.

President's Rule

Article 356 and 357—The President on the receipt of the report from the Governor of the State, or otherwise when he is satisfied that the situation has arisen in the State, in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution can invoke Article 356 and 357, dismiss the State Government and even dissolve the legislature (optional) and assume all powers to himself.

It is the Government at the Union level that assumes all powers. And it is the Union Govt. that decides whether to impose President's Rule or not. In actual practice the governors are told by the Home Ministry when they should write the reports and how they should write the report. The governors are helpless in these matters, as they continue to be governors at the 'pleasure of the President (this only means the pleasure of the Prime Minister). Under Article 356 as it stand, even the governor's report is not necessary, it is only the satisfaction of the President that is necessary; in other words it is the subjective satisfaction of the Prime Minister who heads the Council of Ministers. It is both a tragedy and a force that the State Governments and State Legislatures owe their existence to the pleasure or the whims of the Prime Minister.

It may be of interest to know that historically the President's Rule was imposed for the first time (after Constitution came into force) an 21st June 1951 in Punjb. Even since that day till today the President's Rule was clamped about 67 times in 21 States, excluding the Union Territories. In the scheme of the Constitution the Council of States and the President are the custodians of the intrests of the States. But since the President has to act on the advice of the Council of Ministers under Article 74, the President is reduced to a ruber stamp and in effect it is the Prime Minister and the Council of Ministers who take decisions.

If the President's Rule becomes inescapable it should be imposed only with the approval of both the Houses of Parliament and in consultation with the Inter-State Council. And the elections should be held within 3 months from the date of imposition of President's Rule. The existing government should be allowed to function as a care-taker government.

If the violence and internal disturbances are of such magnitude that fair and free elections could not be held, the President's Rule can be prolonged with the approval of both Houses of Parliament. The Inter-State Council should be invariably consulted. The law should be sutitably ammended.

Article 365 is no less obnoxious. If any State Govt. fails to comply with or give effect to any direction given in exercise of executive power (by the executive), Article 365 would enable the President to invoke Article 365 and impose President's Rule. Here again it is only the judgement of the political executive and not the result of determination by the judiciary. Hypothetically if the directions given by the Union Executive are themselves obnoxious or violate rule of law, is a State Govt. still bound to carry out the directions? Except at the time of war, at other times any direction issued should satisfy the test of public interest and a State Govt. cannot be compelled to carry out the directions given by the Union Executive which can even be 'malafide' sometimes. This Article itself was incorporated eleven days before the Constitution was finally adopted by the constituent Assembly. This is obviously an after thought. This article should be deleted.

Finance

The primary sources of public income are—(1) taxes, (2) Domestic Borowings, (3) Economic surpluses generated by Public sector undertaking. Certain revenues are collected exclusively by Union Govt. These are transferred to or shared with the States. The Fince Commission set up under Article 210, advises the President in the matter in which these revenues should be shared. But however, a susbstantial part of the financing by the Govt. of India is done under the enabling provisions of of Article 275. The Finance Commission has no say in this matter.

During the last 30 years, more tha 60% of the budgetary funds from the Union to the States were in the form of Plan and discretionary assistance and only 40% of funds were transferred in pursuance of the recommendations of the Finance Commission-appointed from time to time. These funds constis tuting 60% of transfer were either directly or indirectly within the jurisdiction and puryiew of the Planning Commission.

The central taxes which the States are entitled to share together accounted for about 55% of the taxes raised by the Union and out of these 55% the States' share was about 45%. The non-statutory grants (Plan and discretionary) were to be decided on the year to year basis when the annual plans were

finalised. Thus it is the Planning Commission which has no statutory authroity that decided the major share of the funds transferred to States and not the Finance Commission which is a statutory body. The Govt. of India can play havoc with the State Govts. by utilising discretionary grants. This has political overtones. Therefore the National Development Council every year should formulate general principles for distribution of grants-in-aid and the deficits in the State budgests must be made good by the Govt. of India, by distributing these grants in an appropriate manner. And such deficits that arise in the State budgets, as a result of developmental programmes which are part of the planning to generate productive wealth and approved by the National Development Council and Planning Commission, should be treated as deficit in the centra budget of the Govt. of India. Such developmenta programmes should be given recognition in the Con stitution. The Constitution should be suitably amended for this purpose. According to Prof. Wheare, one of the essential requirments of federalism is that Union and State must each have under its independent control financial resources sufficient to perform its exclusive functions. The financial position must be adequate as well as elastic according to the division of financial resources and the tax structure. The resources for raising funds available to the States are practically inelastic and comparatively very inadequate. In the context of developmental plans and efforts to reduce uneven development and disparities the States are in need of increasing resources. The Union Govt. apart from the resources available as per provisions of the Constitution has the facility of foreign aid and recourse to deficit financing. These two avenues are denied to the States. If the States have to depend totally on Union Govt. for financial resources, the federal state would end up as a unitary state. This is the danger inherent in the situation. There should be a complete review of all matters relating to the fundamental issue, that is the division of national financial resources between the Union and the States in order to maintain and protect the federal nature of the Indian polity and the financial strength of States' finances. For example it may be mentioned that customs duties, export duties and corporation taxes should be included in the divisible pool. Regarding profits earned by Govt. of India on sale of commodities such as petroleum, coal etc. relating to which the Govt. of India has exclusive trading rights and right to fix prices, what are called administered prices, the States should have a share and the Finance Commissio. can prescribe the principles of sharing.

Corporation Taxes

Clause 6 of Article 366—Corporation Tax means any tax on income so far as tax is payable by companies. In pith and substance Corporation Tax is a tax on income but this is not included in the divisible pool. Thus Corporation Tax should also be treated on the same footing as income tax. Customs and export duties should also be compulsorily distribued between the Union and States. Tax on capital values of assets of individuals and companies should be within the divisible pool.

Article 272 should be amended to make the division compulsory. As the sharing of basic excise duties between the Union and the States as it stands today is discretionary and not mandatory. The additional duties and excise on goods of special importance (Act 1957) authorise the Parliament to impose certain duties and excise on specified goods namely sugar, tobacco, cotton fabrics, rayon, artificial and woollen fabrics produced or manufactured in India and these goods were declared to be of special importance in Inter-State trade and commerce for the purpose of Central Sales Act 1956. While it is true that the Govt. of India has assigned these additional duties to the States the rider in the Act that the State would preclude from getting any part of the proceeds of the additional duties from the Govt. of India if any State imposes a tax on the sale of these goods. This rider prevents the States to impose sales tax on a number of commodities or they should lose the benefit of additional duties of excise.

Under statutory devolution of resources not less than 50% of tax revenues of the Central Govt. should be transferred to the States. In 1982-83 budget such statutory devolution is only 25%. That is why to achieve this purpose the above changes are suggested.

The surcharge on excise duties and income tax should also be shared.

Grants

There are two types of grants (a) grants-in-aid which are statutory grants under Article 273 and 275, (b) non-statutory or discretionary grants.

Article 282 : empowers the Union or State to make any grant for any purpose when it falls outside the area of legislative authority. All grants for plan schemes to considerable extent are discretionary under Article 282. These discretionary grants have overwhelmingly outstripped the statutory grants recommended by the Finance Commission and they have reduced the position of States to that of supplicants for central assistance. Discretionary grants will today range between 71·3% to 88%. These discretionary grants naturally fluctuate depending upon the Centre's financial position. Therefore, the position of the State becomes nebulous and since dependence on the Centre becomes more pronounced in a federal structure while different parties may come to power in different States it would be better an independent body like the Finance Commission lays down the principle even with regard to the discretionary grants without allowing discretionary grants to be used for political manipulations.

Redistribution of Entries in the different lists lincluded in the Seventh Schedule

8. (i) Entry nos. 82 to 92A of the Union List enumerates the taxes that can be levied by the Union Government. Some of these taxes should be justifiably within the Union List. For instance, taxes on income (excluding agricultural income), customs and export duties. Duties of excise on manufactured goods, corporation tax, taxes on transactions in stock exchanges and future markets, Rates of stamp duty on various commercial transactions as enumerated in Entry 91. Such taxes when imposed affects the overall economy. Therefore, they are basically Union functions.

(ii) There is, however, no justification for including the following taxes within the Union List.

(a) Taxes on capital value of land and building in rural and urban areas (Entry No. 86).

(b) Estate duty in respect of land and buildings in rural and urban areas (Entry No. 87).

(c) Duties in respect of succession to property (Entry No. 88).

(d) Terminal taxes on goods and passengers carried by railway, sea or air (Entry No. 89).

(e) Taxes on the sale or purchase of newspapers and on advertisements published therein (Entry No. 92).

(f) Taxes on sales or purchase of goods other than newspapers (Entry No. 92-A).

(iii)(a) Planning, development and administration in respect of urban and rural areas is a State function. Any duties or taxes in respect of land and buildings in the urban and rural areas should normally be levied and collected by the State. There is absolutely no rationale in including these items in the Union List.

(b) Terminal taxes are imposed for the benefit of the local bodies. Every Metropolitan authority has to bear additional civic responsibilities whenever large number of people arrive or large quantities of goods are delivered within their jurisdiction. The strain on civic facilities on account of continuous flow of men and materials justify imposition of taxes which can compensate the local bodies for the extra effort they have to make on this account. While taxes on freights, and passengers can be levied by the Union Govts. terminal taxes should in all fairness be levied by the State Governments and should be collected by the Union Government.

(c) It is not clear why sale or purchase of newspapers should be put in a special category and brought within the Union List. Tax on sales or purchase of any goods should be within the State List (Entry No. 92).

(d) Entry No. 92A introduced under the Constitution (Sixth Amendment) Act, 1956, was an ill-conceived measure. Through a reference to 'Inter-State trade or commerce' an attempt was made to deprive the States of its rightful claims.

Distribution of Revenue between the Union and the States

9. (i) There is no justification for levy of duties by the Union when the Duties are collected and appropriated by the States. Under Article 268, the States are discharging this function at present. The proceeds are very small. Furthermore, no State will impose duties which will be a disincentive to location of industries in the State. Having regard to this, Entry No. 84 in the Union list and Article 268 should be amended so as to empower the States to levy duties enumerated in Article 268.

(ii) Article 269 should be amended. Taxes and duties, as pointed out in para 8 (ii) above, because of their very nature, should rightly belong to the State List. This will call for modification of Entry Nos. 86, 87, 88, 89 and 92 and transfer of the items mentioned in para 8 (ii) to the State List. Entry No. 92A should be deleted.

(iii) Article 270 should be amended so that "taxes on income" include corporation tax. Substantial amounts are realised by way of Corporation Tax and this amount has been kept out of the divisible pool without any justification whatsoever.

(iv) Parliament has been empowered under Article 271 to increase any of the duties or taxes referred to in Article 270 by a surcharge for purposes of the Union. A surcharge is normally imposed to meet a special situation. Normally occasion for such an imposition should not arise. Since imposition of such a surcharge may affect the financial interests of the States, approval of the Inter-State Council should be necessary in such cases. This will call for amendment of Article 270.

(v) The States' share of Union Duties of Excise should not be less than 50 percent of the proceeds. Article 272 should be appropriately amended.

(vi) Article 274 provides for prior recommendation of the President in respect of bills affecting taxation in which States are interested. Since the President gives recommendations only on the advice of the Union Council of Ministers, he has no special role to play in this regard. This Article therefore requires amendment. The recommendation referred to in Article 274 should hence forward be obtained from the Inter-State Council. The money bills which propose to vary any tax or duties in which the States are interested should require concurrence of the Inter-State Council. Article 274 and 109 should be appropriately amended.

(vii) The ceiling provided in Article 276(2) should be deleted.

Central Sales Tax

There are many defects in Central Sales Tax Act 1956, preventing State legislatures from imposing sales tax on commodities, which are declared by the central laws as commodities of special importance for inter-State trade and commerce.

(viii) Sales tax should be exclusively a State subject. This is the only elastic source of revenue for the States and curtailment of this power by earlier amendments to the Constitution deprived the States of substantial revenues. Article 286 should be amended. The restrictions on the States jurisdiction through Constitution (Sixth Amendment) Act, 1956 should be done away with. Articles 286(2) and 286(3) should be deleted. In case of any Inter-State dispute in this respect, the Inter-State Council should discuss the matter and settle the issue. The States can also enter into either bilateral or multilateral agreement with each other to sort out administrative problems arising out of this matter.

(ix) Article 287 should be suitably amended. It is not clear why Railways which consume substantial quantity of electricity should be exempted from payment of taxes on electricity. While Govt. of India offices may be exempted from payment of such taxes,

but there is hardly any justification to exempt commercial operation of the Union Government from payment, payment of electricity duty. This is another instance where the bias against the States are so obvious. While the Union enjoys all the exemptions as enumerated in Chapter I of Part XII of the Constitution, the privilege extended to the States under Article 289(1) is withdrawn in the next clause namely Article 289(2).

(x) For calculation of net proceeds of taxes in the divisible pool, cost of collection should be determined and certified by Comptroller Auditor General, subject however to a ceiling to be determined annually by the Union Government in consultation with the States. This is essential to prevent wastage of resources through massive expenditure on administration.

(xi) In an emergency the State Governments should have the authority to obtain ways and means advance from the R.B.I. subject to future adjustments. "Emergency" will mean natural calamities and internal disorders.

(xii) Borrowing by States require approval of the Union Government. The principles and quantum of such borrowing including the share of the States should be decided by the Union Government in consultation with the State Governments. The policy of the Union Government in this regard should be placed before the Inter-State Council every year. Final decision should be taken by the Union Government having due regard to the views of the State Governments as expressed in the Inter-State Council.

Inter State and Intra State Trade

Article 322 empowers the Parliament to impose restrictions on trade and commerce not only relating to inter-state trade but also intra-state trade in public interest. There is no point in empowering Parliament to impose restrictions on intra-state trade. It is an exclusive sphere of the States. Trade and Commerce are in Entry No. 26 of the State List but it is subject to Entry No. 33 of the concurrent list. Entry No. 33 of the Concurrent list is as follows :

Trade and commerce in, and the production, supply and distribution of :

(a) the products in any industry where the control of such industry by the Union is declared by Parliament by law to be expedient in the public interest, and imported goods of the same kind as such products;

(b) Foodstuffs, including edible oilseeds and oils;

(c) cattle fodder, including oilcakes and other concentrates; and

(d) raw cotton, whether ginned or unginned, and cotton seed; and

(e) raw jute.

While there may be force in the contention that production, supply and distribution of certain products of an industry which may be of vital interest connected to defence or integrated planning may be under the jurisdiction of the centre it is not necessary to subject the power of the State legislature to that of Parliament relating to trade and commerce in general. Therefore Entry No. 33 of the Concurrent List will have to be suitably modified.

Clause B of Articles 304 uses the expression reasonable restrictions relating to the power of the legislature of a State whereas Article 302 uses only the expression 'restriction' without being qualified by the word 'reasonable'. In article 302 restriction must be qualified by the word 'reasonable'.

Under Article 304 no bill or amendment for the purpose of imposing reasonable restrictions on the freedom of trade and commerce by the legislature can be introduced without the previous sanction of the President. Such previous sanction may be necessary in relation to inter-state trade but it would not be necessary when the State legislature has to deal with intra-state trade. If the restrictions imposed by the State Legislature are not reasonable and not in public interest the High Court or the Supreme Court are empowered to strike down the law. The previous sanction of the President cannot render invalid law valid. Hence the proviso to Article 304 should be committed.

Article 307 contemplates the appointment of an authority for carrying out the purposes of Article 301, 302, 303 and 304. It is similar to inter-state Commission in the USA. It would be desirable to appoint such a commission to deal with such cases in the course of inter-state commerce rather than leaving it to the political executive of the Union.

Public Financial Institutions

Public financial institutions such as IDBI, IFCI, U.T.I., L.I.C. and the banks have played a vital role in the economic development of India 'growth of concentration of economic power, growth of monopoly—private sector itself. The financial foundations of private sector within the framework of mixed economy are based on the financial institutions over which only Union Govt. has a control and the States Govts. have no say at all. To make only the case of IDBI as on 30th June, 1981 outstanding with IBDI's borrowing from the national industrial credit (long term operations fund) were of the order of Rs. 1333 crores. The commulative amount of assistance sanctioned and disbursed since the inception of IDBI stood at Rs. 7088 crores and Rs. 4730 crores respectively as at the end of 1980-81. The amount outstanding as at the end of June 1981 was Rs. 3214 crores. Having regard to the enormity of the role of these financial institutions they must be brought under the control of National Development Council and the investment pattern has to be decided by the National Development Council from time to time consistent with the objectives laid down in the Preamble of the Constitution. Any project set up (after necessary approval) in the public sector either by the Central Govt. or the State Govt. should not suffer for want of finance and the public finance institutions' primary investment must be in the public sector and not in the private sector. State Development Corporations should not be forced or abetted to act as agencies to private sector.

Inter-State Council

Article 263:. Under Article 263 the President can establish an Inter-State Council for the purpose of coordination between the States. So far the President has not established such a council. No doubt the 5 Zonal Councils came into existence as the result of States Re-organisation Act. But they have become practically non-functional. It is high time, for the purpose of coordination between the States, an inter-State Council, under Article 263 should be immediately established. Apparently Article 263 as it is worded does not contemplate the disputes between the Union and the States to be brought before the council. Inter-State Council should have the power to discuss if the disputes arise between the Union and the States Article 263 should be suitably amended.

While redistribution of powers to raise resources with a view to enable the States to meet their obligations is essential, regular dialogue between the Union and the States, on a plane of equality, is no less important. Coordination between the States was conceived in the Constitution. Article 263 provided an appropriate machinery. But in exercise of the powers under Article 263 the President has already constituted the Central Council of Health, the Central Council of Local Self Government and the Central Council of Indian Medicine. Number of other advisory bodies have also been set up. Dr. D.D. Basu in his introduction to the Constitution of India pointed out that, "In fact, the primary object of an Inter-State Council being coordination and federal cohesion, this object has been lost sight of, while creating fragmentary bodies to deal with specified matters relying on the statutory interpretation that the singular 'a' before the word 'Council' includes a plural. A number of Councils designed on the present pattern can hardly serve any purpose. Before Council meetings are held voluminious papers explaining the Union Government's policies are furnished to the State Governments. There is no scope for any genuine participation by the States in such meetings. The States accept whatever they are told. In any case, any dissent by any State does not affect the decision of the Government of India in any way.'

Under a reorganised system, discussion on most of these routine matters can be held at the official level. Only important policy matters of national importance having direct bearing on financial and administrative co-ordination should be discussed in the Inter-State Council. And there should be only one Council presided over by the Prime Minister with all the State Chief Ministers as Members. It would be necessary to amend Article 263 to give the Inter-State Council the powers to ensure coordination between the States as well as between the Union and the States. A Council consisting of all the Chief Ministers and presided over by the Prime Minister will be an effective body capable of dealing with all intricate issues in the field of coordination. Such decisions cannot be left to either the nominees of the Chief Minister or the nominees of the Prime Minister. If for any reason, whatsoever, the Prime Minister is unable to preside over the meetings of the Inter-State Council the senior-most Chief Minister should preside over the meeting. The question of either the Union Home Minister or the Union Finance Minister presiding over such meetings in the absence of the Prime Minister should not arise. Union Ministers and Ministers of State Governments may, as and when necessary, attend the meetings of the Inter-State Council to assist the Prime Minister and the State Chief Ministers. In such meetings as far as possible decisions should be taken by consensus. However, in case of any difference of opinion, recommendation of the Inter-State Council, when adopted by a majority or two-third members present and voting, should be acceptable to both Union and the States.

Another important aspect is the selection of the Secretary-General of the Council and other supporting officials. The post of Secretary-General should be held by a person nominated by turn by the States. Other Officials should be nominated according to an agreed formula, by the State Governments and the Union Government. This arrangement will ensure independent functioning of the Secretariat which is absolutely essential.

Recommendations of Shri Rajmannar's Committee

1. Every Bill of national importance or which is likely to affect the interests of one or more States should, before its introduction in Parliament, be placed before the Council, and its comments and recommendations, thereon should be placed before Parliament at the time of introduction of the Bill.

2. It should be definitely provided that before the Union Government takes any decision of national importance or any decision which would affect one or more States, the Inter-State Council should be consulted.

Exceptions may be made probably in regard to subjects like defence and foreign relations. But even in such matters the decision of the Central Government should be placed before the Inter-State Council subsequently without any avoidable delay.

3. If the Inter-State Council is to be really effective its recommendations should be made ordinarily binding on both the Centre and the States.

If for any reason, any recommendation of the Inter-State Council is rejected by the Central Govt. such recommendation together with reasons for its rejection should be laid before Parliament and the State Legislatures.

National Development Council

The National Development Council should be given Constitutional status entrusted with broad functions in relation to planning and development, economic coordination to achieve the objectives mentioned in the Preamble to the Constitution and Principles stated in the Directive Principles of the Constitution.

Planning Commission

The Planning Commission has been created by an executive order and is being currently used more as a political instrument of the Government than as an expert body charged with the responsibilities of planning, economic development and socio-economic

changes in the broad framework of objectives laid down by the Preamble to the Constitution. Hence the Planning Commission should become a statutory body created by the Parliament. It should consist of experts and act as an advisory body to National Development Council. It should have the freedom to plan, to supervise implementation of plans, to advise as well as to criticise without any inhibition. So far the plan development has resulted in economic growth in certain directions. It has taken the path of capitalist development and not social planning partaking the character of socialist planning.

Associate State Planning Bodies

The law should provide for creation of Associate State Planning Bodies for formulating and implementing in a purposeful manner State Plans and development projects. There should be purposeful coordination between Central Planning Commission and Associate State Planning Bodies. The Associate State Planning Bodies must function as Planning Commissions with in the sphere of the States.

Full Statehood for Delhi, Pondicherry & Goa

It is time that full-Statehood is conferred on Delhi, Pondicherry and Goa.

The Nominated Members to Rajya Sabha

Though the constitution makers had laudable objective in providing for nomination to Rajya Sabha of certain categories of persons. The provision of the constitution had been abused and misused quite often. The principle of nomination should be given up and there should be no nominated members.

Devolution of Power within a State

While the demand that the power from the Centre should be devolved further to the States, the power should not get concentrated at the level of States. Within a State, there should be a devolution of Power to various bodies like Z.P., Panchayat Samities and article 40 of the directive principles of State policy which enjoins a duty on the State to organised village Panchayats and endow them with such power and authority as would be necessary to enable them to function as units of Self- Government should become a reality.

Under Article 244-A the Parliament can form an autonomous State within the State of Assam

This article should be suitably amended for enabling the creation of autonomous regions within the given State providing democratic institutions consistent with the character and composition of that particular State.

Entry No. 31 of the Union List

A.I.R. and T.V. are slowly ceasing to be National Institutions and are being transformed into political instruments of ruling parties. They should be converted into autonomous Corporations directly responsible to inter-state Council.

Entry No. 7 and Entry No. 52 of the Union List

Entry No. 7 must be restricted to cover such industries and industrial production that are directly related to defence or prosecution of war.

Taking advantage of Entry No. 52 which reads as follows : "*Industries the control of which by the Union is declared by Parliament to be Law to be expedient in the public interest*. The Centre is trying to control all kinds of industries including small scale industries. Hence industries development regulations and policy must be reviewed from time to time by National Development Council and the Law should be accordingly amended and the same principle must be made applicable to the regulation of mines and mineral development under Entry No. 54.

Economic planning and economic coordination and the core sector of industry should remain the responsibility of Union. The Planning Commission with respect to medium and small scale industries which do not need foreign aid or foreign collaboration and are totally based on indigenous technology, allocate capabilities to each State. Within the limits of allocation of capacities, the States should have the power to issue letters of intent and licences in conformity with national/industrial policy and Directive Principles of the Constitution.

Acquisition and Requisition of property

Entry No. 42 of the Concurrent List

Deals with acquisition and requisition of property for the purpose of the State. The power of the State to acquire or requisition property must be unambiguous. Therefore, the power to acquire property for the purpose of the State should be in the State List. This assumes importance in the context of the take-over of sick industries apart from other properties by the States. Now the sick industry has become a happy hunting ground to derive benefits of merger and deductions in Income-tax. At present, even if the State Govt. wants to take over, it has to face enormous difficulties hence amendment of Article 31 (c) also is called for.

IAS and IPS : All India Services like IAS and IPS officers are posted in the States but they remain under the supervision and disciplinary control of the Union Government. It is forcibly contended that when different political parties come to power in States and the Centre, the Central Govt. attempts to use the IAS and IPS officers and advise them to non-cooperate and some time to subvert State Govts. and bring these Govts. to disrepute. While there is considerable truth regarding the attempts made by the ruling party at the Centre to use these Officers and also that some of them succumb to the pressures and temptations, all officers cannot be treated to belong to the same category. Some of them are persons of conviction, high integrity and character. But for some such officers belonging to IAS and IPS there would not have been even a semblance of administration in State like Bihar. Hence a balance must be struck regarding their position in State administration. *It is undoubtedly true they must remain under the supervision and disciplinary control of the State Govt. primarily but they must have reasonable protection from harassment and insecurity from some unscrupulous political heads of the Govt. and various ministries. There are good governments and there are not a few bad governments too. Hence while these officers must be primarily under the control of the State Govt., there must be administrative tribunals*

to deal with disciplinary matters and security of service. The Tribunals should also have power to suo moto enquire into misconduct of officers.

The Administrative Tribunals must be constituted with the judges of high courts and they should be nominated by a judicial committee consisting of the Chief Justic of India and two senior judges of the Supreme Court. These Tribunals can have their benches in some important places in India. The officers must have a right to appeal to the Supreme Court against the order of the Tribunal. The same procedures and principles should be made applicable to the officers and employees appointed by the State Governments.

Judiciary

The common man in India has still faith in the Judiciary, inspite of the gradual clogging of the system. The courts on their part are trying to inspire confidence in the people by exploring new vistas of sociological jurisprudence like public interest causes. Unstinted faith in and abiding commitment to the objectives stated in the Preamble of the Constitution should become the ethos of judicial conscience.

Without independent judiciary and faith of the people in judicial institutions, the very democratic structure and federalism cannot survive.

In a federal structure created by the Constitution providing for distribution of powers between the Union Executive and the Parliament on one hand and State Legislatures and State Executives on the other the Supreme Court has to act not merely as the interpreter and the guardian of the Constitution but also as a tribunal for the determination of disputes between the States and the Union and among the States. Under the Constitution Supreme Court is vested with jurisdiction to deal with these matters under Article 131. With multiplicity of political parties coming to power the judiciary has a vital role in maintaining the stability of the federal structure. Hence no political party should be allowed to have an opportunity to subvert judicial institutions.

Under Article 124 every judge of the Supreme Court is appointed by the President after consultations with such judges of the Supreme Court and High Court in the States as the President may deem necessary and in the case of appointment of judges other than the Chief Justice the President is bound to consult the Chief Justice of India. The President under Article 74 is bound to act on the advice of the Council of Ministers. He has no discretion in the matter. Hence the Law Ministry, the Home Ministry and the Prime Minister are generally concerned in the appointment of judges and ultimately it is the Prime Minister who decides. Thus the judges' appointments are made by the Executive. With the multiplicity of different political parties coming into power in the States and the Centre the appointment of judges must be above controversy. Therefore, it is suggested that Article 74 should be amended suitably that the Council of Ministers will not be concerned with the appointment of judges and they cannot render any advice under Article 74 and the President need not act on their advice.

With regard to the appointment of judges of the Supreme Court since already the Supreme Court is in existence and is functioning there should be a judicial committee consisting the Chief Justice and all the other judges. There should also be a judicial Council of the Council of States. This judicial committee should make recommendations in consultation with this Judicial Council regarding the appointment of judges to the Supreme Court to the President. If they desire they may have the benefit of consultations with Chief Justices of High Courts. In case of appointment of the Chief Justice the senior most judge of the Supreme Court unless he is medically disqualified must be appointed. In all matters the advice given by the judicial committee to the President must be binding on the President, the President shall act on their advice as he does now under Article 74. If the President choses he may also consult the Government. In case of appointment of High Court judges the judicial Committee of the Supreme Court shall consult the Chief Justice of the High Court concerned or any other Chief Justice or judges as they may deem necessary. The President may consult the State Government but he shall act on the advice of the Judicial Committee of the Supreme Court.

Regarding the transfer of judges, the Judicial Committee of the Supreme Court should be the final authority. While transfer in certain cases cannot be disputed, that matter has to be left to the Judicial Committee of the Supreme Court. This appears to be the only way how the judiciary can be made totally independent of the political executive and how different political parties with their socio-economic philosophy coming into power in the State and the political party ruling at the Centre treating some of the State Governments with utter hostility can have confidence in the federal system thus strengthening the forces of national unity and national integration. There are attempts now to denigrate and to destroy the sacred institutions created by the Constitution. It is ultimately the quality, integrity and the stature of men who fill these posts that matters. Their appointment should not give scope for suspicion or controversy.

Under Article 143(1), the President can refer certain matters to the Supreme Court for their opinion. It has been recommended by Shri Rajmannar's Committee that a provision on the lines of Article 143(1) may be made empowering the Governor to refer the quesion of law or of public importance to the High Court. In a number of States in the American Union, it is constitutionally provided for this purpose. A provision may be made for such reference to the High Court by the State Government.

Election Commission

Under Article 324(2) the President appoints the Chief Election Commissioner and other Election Commissioners. When any other Election Commissioner is appointed, Chief Election Commissioner acts as the Chairman of the Election Commission. As the President is to act on the advice of Council of Ministers under Article 74, in practice for all purposes it is the political executive that appoints the Chief Election Commissioner and other Election Commissioners if any.

Sanctity of democratic processes and confidence in democratic institutions depend to a large extent on the independence and supremacy, strength of character and democratic conscience of the Chief Election Commissioner and other Election Commissioners if any. If they acts as agents of political executive of the ruling party at the Centre, democratic processes would be subverted and democratic institutions would be destroyed.

In the context of political pluralism if there should be harmony between the Centre and States with different political parties in power, the Election Commission should not only be independent but also its conduct should be beyond suspicion. For achieving this purpose, the Chief Election Commissioner should not be appointed by the political executive.

The Supreme Court should select a person who is qualified to be appointed as a judge of the Supreme Court, for the post of Chief Election Commissioner and either judges of High Court or persons qualified to be appointed as the judges of High Courts for the posts of Election Commissioners. The President should act on the advice of the Supreme Court as he does under Article 74 under the advice of the Council of Ministers.

The Election Commission should consist of at least three commissioners, i.e. Chief Election Commissioner and two Election Commissioners. The Election Commission in consultation with the Chief Justice of the respective State High Court should appoint the Regional Election Commissioners for every State.

RESOLUTION OF THE SRINAGAR CONVENTION OF OPPOSITION PARTIES

On Centre-State Relations

(5—7 October 1983)

Following is the full text of the statement adopted by the meeting of oppoistion parties at Srinagar from October 5 to 7 and released to the press by Jammu and Kashmir Chief Minister Dr. Faroo- Abdullah on October 8:

1. The nation to-day is in the grip of a crisis and the future of our polity is imperilled. The cherished democratic values of our freedom struggle are under assault, and the assertive trend of centralisation of power leading to authoritarianism has resulted in disturbing signs of alienation in some parts of the country. This dangerous drift has to be halted.

2. The integrity and sovereignty of India must emerge from a conscious effort towards harmonisation of the distinct linguistic, ethnic and cultural entities which constitute our great nation. The golden thread of unity created by the freedom struggle still runs throughout the length and breadth of the country; we must ensure that this thread is strengthened in the times to come.

3. We believe that the constitution, whatever its limitations, is a document of great relevance to the democratic advance of our people and it has to undergo changes keeping in step with the experiences and demands of people. It is in this context that this meeting of various political parties, representative of a very wide spectrum of national opinion, has approached the question of restructuring the union-states relations in its political, economic, legal and constitutional aspects. The meeting believes the appointment of the Sarkaria Commission, though welcome, is an inadequate response to the requirements of the situation.

4. We are deeply aware of the external threats to the nation's security. We are also conscious of a situation of turmoil in many sensitive areas. As a nation, we have, however, deep inner reservoirs of strength to meet such threats and we have no doubt that the people would zealously guard and preserve the priceless treasures of freedom and sovereignty. It is against this background that we consider it altogether relevant to solve expeditiously the problems of centre-states relations, so that there could be faster and more evenly balanced economic progress for our people. This would also further strengthen the forces of national unity and process of national integration.

Political and Administrative Aspects

5. Although our constitution was meant to be a federal one, its unitry features have increasingly come to overshadow its federal features. Over the years, becaues of the persistence of one-party rule both at the centre as well as in the states, the powers vested in the states have been greatly eroded.

6. All this has given rise to many tensions and disputes between the centre and the states. It is important to restore and strengthen the autonomy of the states and to strike a proper balance between the powers of the centre and those of the states, so that the character of our multi-religious, multi-lingual and multi-cultural country is preserved.

7. To this end, it is necessary to curtail the arbitrary powers of the centre with respect to the states. The dismissal of elected state governments, the dissolution of state assemblies and peremptory decisions to hold or not to hold elections must stop.

8. The institution of governors has been misused for the purposes referred to above. The record proves beyond a shadow of doubt that, in most cases, the governors have used their office to serve the interests of the ruling party at the centre. It is unlikely that they would have acted thus except at the instance of the leaders of the ruling party. The clear intent of the framers of the constitution and indeed, its letter and spirit have been violated in all significant respects.

These are : the appointment of the governor in consultation with, and with the consent of, the state's Chief Minister, the calibre and stature of the governors; the security of tenure to which a governor is entitled; the imposition of President's rule and the governor's right and duty freely to discharge his functions without being instructed or dictated by the centre, especially in regard to the appointment of the Chief Minister and the dissolution of the legislature. The position of the governor, we feel, should be in no way different from that of the President. We

suggest that the governor should be appointed by the Present on the basis of a panel forwarded by the state government concerned.

9. In this context, we also feel that articles 356 and 357 which enable the President to dissolve the state government or assembly should be suitably amended. In case of a constitutional breakdown, provision should be made for holding elections within six months and for installing a new government. If, however, elections cannot be held due to such violence as disrupts the normal life making it impossible for a fair and free election, the President will consult the inter-state council as proposed in article 263. Following that, he will place the opinion of the inter-state council before Parliament for decision for the imposition of President's rule for a period not execding six months, or otherwise.

10. We are also of the opinion that the following provisions of the constitution have to be either amended or deleted.

(a) **Articles 200 and 201.**—The state legislature must be supreme in the sphere of legislation on matters pertaining to the state list and no interference by the centre or the governor should be allowed on any ground, except in the case of bills which affect the powers of the high court.

(b) **Article 248 and entry No. 97 in the union list**— Article 248 and entry 97 in the union list empower the union with the residuary powers concerning all matters. Such residuary powers, we feel, should rest with states.

(c) **Article 249.**—Article 249, which empowers the centre to legislate on a subject in the state list under the plea of national interest should be omitted.

(d) **Article 252.**—Article 252, which empowers the union to legislate on the request of the two or more states to pass laws on subjects mentioned in the state list, should also be reviewed and amended.

(e) **Article 263.**—Under article 263, the President can establish an inter-state council. It must be made mandatory for the President to constitute such an inter-state council consisting of the prime minister and the chief ministers of all states. The council will deal with all disputes between the states and the union and with any other matter of national importance.

(f) **Article 360.**—Article 360, which empowers the President to interfere in a state administration on the ground of a threat to financial stabillity, should be deleted.

(g) **Article 365.**—Article 365, which empowers the President to dismiss the state government for not implementing the directions of the centre, should be so amended as to prevent its misuse.

(h) **Article 370.**—The special constitutional status of the state of Jammu and Kashmir under article 370 should be preserved and protected in letter and spirit.

(i) A number of other articles in the constitution deal with the power and functions of the governor vis-a-vis his council of ministers and the union government. These articles too should be reviewed.

11. It is also for consideration whether the three lists under schedule seven should not be reviewed in the light of our experiences over the past three decades.

12. The officers of the existing all-India services, when they serve in the states, must be under the supervision and disciplinary control of the state government. If any appeal is to be lodged against any disciplinary action taken by the state government, the appeal should be referred to administrative tribunals set up for the purpose. The tribunals must be independent of both the state and the union governments.

13. The judiciary at all levels must be free from political interference. The judges of the supreme court should constitute themselves into a judicial council and make recommendations regarding the appointment of judges of the supreme court and appointment and transfer of judges of high courts. Before making their recommendations, they should consult the state governments, the union government and the chief justices and judges of the high courts. The advice of the judicial council of the supreme court should be binding on the President.

14. The impartiality and credibility of the election commission is an imperative necessity for free and fair elections. The election commission should consist of three members to be appointed by the President on the recommendations of the judicial council proposed in paragraph 13.

15. Law and order is a state subject, and the prerogative of the state in the matter must be fully respected. There could be occasions when induction of central police forces may have to be considered. In all such cases, prior concurrence of the state governments must be taken. The meeting is firmly of the view that the disturbed areas act should not be extended to any state without the prior approval of the state government concerned.

16. As the nation knows, the radio and television are being increasingly misused by the ruling party at the centre. In a democratic society, the people have the right to know the doings and misdoings of those whom they have elected. They have also the right to know and understand details of various opinions regarding government policies. A statutory central communications council should be set up. Its membership should include ministers of central and state governments, leaders of political parties and experts. This council should oversee the functioning of the radio, television and other government-managed media. Similar councils should also be established at the state level.

Economic and Financial Aspects

17. This meeting is of the view that the present economic imbalances and deprivation and backwardness of many states are the consequence of the over-centralisation of economic powers and resources. Structural and other factors have inhibited rapid and balanced growth of states and regions.

The present high centralised pattern of economic and financial administration has resulted in a system where priorities are imposed from above and bear diminishing relevance to the aspirations of the people. The supervision and management of projects too have suffered adversely as a result. Given the overwhelming concentration of resources in its hands, the centre has often been discriminatory in its allocation of resources as between region and region and state and state.

18. Currently, as much as 70 per cent of the total resources raised in the public domain is retained by the union government, and only 30 per cent is available to the 22 state governments. This kind of lop-sided distribution of finanacial resources is without parallel for a federal polity. The more elastic sources of tax revenue are reserved for the centre. The states are not allowed any share of the proceeds of the corporation tax, which these days exceed those from the income tax. The centre refuses to share with the states the yield from the surcharge on income tax.

Articles 268 and 269 indicate certain areas of resource-raising which belong to the jurisdiction of the centre, but the resources thus raised are supposed to be placed with the states; these articles have, however, barely been taken advantage of. The centre has, on the country, encroached on the state's share of sales taxation through the scheme of additional duties of excise.

A number of other arrangements, such as fixing a ceiling on the rate of sales taxation for goods 'declared' to be of national importance, or prohibiting the states from imposing sales tax on exportable goods, have deprived the states of their due share of revenue. The reluctance of the centre to pay the states appropriate royalty for the exploitation of their mineral wealth is a further source of erosion of resources for the states.

19. It is also necessary to mention the pernicious effect of the recently adopted practice of the union government to collect additional revenue by raising the administered prices of commodities such as petroleum products, coal, iron and steel, cement, aluminium, etc, instead of adjusting the rates of excise duties. The states have been deprived of thousands of crores of rupees on account of this practice, Several other instances can be cited about how central taxes have been adjusted in a manner such as to affect the interests of the states.

20. Another example of the states being deprived of their legitimate share of national resources is illustrated by the case of public borrowings from the market. In the 1950s as much as two-thirds of the yield from market borrowings used to be allocated to the states, and only one-third was retained by the centre. In contrast, the centre now retains as much as 90 per cent, leaving just 10 per cent for the states.

21. While the union government can take recourse to created money of unlimited quantum, the overdraft which the state governments are occasionally forced to take from the Reserve Bank of India is subjected to severe limits and conditions, and carries a heavy burden of interest. Similarly, the states have no control over the destination, or terms and conditions, of advances made by the commercial banks, which currently amount to nearly Rs. 40,000 crore. Such is also the case with the investments of public financial institutions.

22. This meeting demands that the following changes in the financial arrangements between the centre and the states be immediately brought about :

(a) The proceeds of the corporation tax and the surcharge on income tax be made shareable with the states ;

(b) The provisions of articles 268 and 269 be fully taken advantage of;

(c) The scheme of additional duties of excise be abolished;

(d) 40 per cent of the yield from every increase in administered prices be passed on to the states;

(e) A review be made of the principles guiding decisions as regards "declared" goods;

(f) The royalty payable to the states for their mineral resources be determined on an ad valorem basis in consultation with the states ;

(g) The union government's policy with respect to created money and overdrafts be reviewed after taking due account of the point of view of the states ;

(h) The state governments be allowed representation, on a rotational basis, on the central and local boards of directors of the Reserve Bank of India, and they be permitted to open commercial banks to serve the interests of the people ; and

(i) An institutional forum be set up for consultation between the union and state governments on fiscal issues which are of mutual concern.

23. The role of economic coordination and planning to solve the complex and diverse problems facing our nation can hardly be over-emphasised. Unfortunately, both the national development council, intended as the highest policy-making body on social and economic issues, and the planning commission, which is an instrument to implement the council's directions, have functioned in a manner entirely vitiating their original role.

Neither the council nor the commission has any constitutional or statutory basis. The council's meetings have been reduced to a ritual; little scope exists at these meetings for any substantive discussion on the grave issues facing the nation. The planning commission has similarly been made an appendage of the union government and has failed to reflect, or respond to, the needs of the people at the grassroots.

The meeting is of the view that both the national development council and the planning commission be reorganised after effecting necessary constitutional and statutory changes to ensure proper representation of the states on these bodies; the commission's relationship to the council should be clearly defined.. The composition and functions of the commission should be such as to make it a nodal agency between the centre and the states.

24. The present authority of the planning commission and the union ministry of finance to offer discretionary grants to the states must be drastically curtailed. Such discretionary transfers now account for more than 70 per cent of the total transfers to the states, and constitute a major source of arbitrary behaviour on the part of the centre. All financial transfers should belong to the jurisdiction of the finance commission. The president should consult the states on the composition and terms of reference of this commission.

25. In deciding the inter se allocation of the aggregate transfers to the states, the first charge must be a minimum earmarking of funds for the relatively backward areas. The finance commission must, in addition, take into account the incidence of poverty and the proportion of harijan and tribal populations while determining the distribution of resources between the states.

26. Under the existing arrangements. 70 per cent of the central plan assistance to the states comes in the form of loans. This meeting demands that all such assistance should be treated as grants, and liabilities incurred by the states on this account should be written off. It further suggests that a national debt commission be set up to review the other outstanding debts of the state governments and suggest measures to phase them out; this commission should also be empowered to review the union government's debts.

27. The meeting recommends that a national expenditure commission be set up, on a permanent basis, to advise and counsel the union and state governments on the pattern of their respective expenditures and the scope for economising on them. The relationships between this commission and the planning and finance commissions should be carefully laid down.

28. It is to be understood that the devolution of resources from the centre to the states has to be further carried forward within each state to the territorial councils, the zilla parishads and other local and village bodies so that the interests of the masses can be truly served.

29. The provisions and working of the industrial (development and regulation) act, this meeting is of the opinion, must be subjected to a through review.

30. The centre's power to regulate inter-state trade should also be similarly reviewed. For example, the present absurdity whereby foodgrains can be transported by private trade from one state to another while a state government agency cannot do so without the center's approval must be brought to an end.

31. We would also urge that the union government be persuaded to assume the responsibility for ensuring the supply of 15 to 20 major foodgrains, industrial raw materials and essential commodities all over the country at a uniform price. The concept of national unity looses much of its lustre if essential articlses are not equally accessible in all states, or if some of them are available at uniform prices all over the country while others are not. The centre should seek the cooperation of the states so that these deficiencies are corrected.

On Toppling Games

The era of one-party rule at the centre and in the states has ended. The political scenario has undergone a transformation with different political parties holding the reigns of administration in a number of states. But the Congress-I refuses to see the realities of the situation and is not reconciled to loss of power. Overt and covert efforts are afoot to destabilise non-Congress-I government's in various states.

This meeting notes with deep concern that the ruling party at the centre is resorting to undemocratic and corrupt means to topple duly elected governments in utter disregard of the people's will. This meeting warns that any such attempt to topple popularly elected governments will be firmly resisted by all those who hold our secular, democratic and federal parliamentary system dear to their hearts, and pledges to mobilise public opinion on a nation-wide basis.

On Punjab Situation

This meeting reiterates its deep concern at the deterioration in Punjab situation that continues to cause anxiety to the entire country.

It is indeed tragic and heart-rending that violence has continued unabated. The administration has miserably failed to perform its primary responsibility of providing security of life and property to peaceloving people of Punjab. Large number of innocent lives have been lost causing immense suffering to their families and relatives.

The opposition parties and many leading persons had repeatedly pointed out total collapse of administration in that state and had urged early settlement of issues, but narrow party interests were assigned precedence over vital national interests. We representing our respective parties and coming from all parts of India, strongly condemn all acts of violence and appeal to all political activists to firmly assert against such acts and activities.

We appeal to people of the Punjab to take active steps for speedy restoration of traditional peace and amity amongst the Hindus and Sikhas who are so closely bound together by kinship, common language and heritage.

The Punjab have proved of Hindu-Sikh unity and of dedicated service to the nation. This must be sustained at all costs.

At Vijayawada and Delhi, the opposition parties had concluded that delay in resolving the Punjab issue was hazardous for the state and the country. The Delhi meeting had worked out a consensus formula for the solution of the problem and had communicated to the government their willingness to cooperate in finding a resonable solution.

We once again call upon the government of India to take effective and immediate steps to resolve the longstanding problems of the state thus ensuring return of normalcy, peace and amity.

DEMOCRATIC SOCIALIST PARTY

State Unit—Himachal Pradesh

MEMORANDUM

I on behalf of my party (Democratic Socialist party) submit to the Hon'ble Commission the party views in the matter of Central State Relations :—

1. Our Party stands for a strong Centre and greater autonomy, financial as well as Administrative to the States. Harmonious functioning of Centre and States in the matter of Legislative, Financial, Administrative and such other inter connected matters to demonstrate Indian Government a Union/Federal Government in the real sense as enshrined in the Constitution.

2. The whole scheme of allocation of funds required to be reviewed, giving more financial powers to the States to run their affairs smoothly, State share in Income Tax Receipt, Customs and other Corporate taxes, be properly enhanced.

3. Special Federal Fund for the/to assist the backward and Hilly States be created to being them at par with the Developed States.

4. A "Permanent Commission" be set up to assess the losses caused by natural calamities such as flood, draught, hail storm etc. and to place adequate funds at the disposal of the Commission for distribution in the affected areas of the States.

The meeting reiterates its faith that longstanding problems of Punjab need immediate and urgent solution.

5. Article 356 be amended suitably to restrain the Governor as an Agent of the Central Government conspiring to wreck the State Governments run by the Opposition Parties.

6. The test of the majority of any party be made on the floor of the House and not by and explicit or implicit whims of the Governors at Raj Bhawan, so that dignity of the Office of the Governor be maintained and issue should not be a subject of ridicule.

7. Legislation to check the horse trading amongst the Elected representatives be done away with by passing an Anti-Defection Legislation, because this defection has eroded the very vital of the Parliamentary system of our Democracy.

8. To mobilise State resources, the State Governments should be allowed to give powers to set up Industrial Units, medium and Heavy Industries for which raw material is already available in the States. At present for all such matters licences will have to be taken from the Centre. It has generally been seen that such licences are not issued on equitable basis but on political consideration and as such the States having rich natural resources are still languishing in backwardness, unemployment and poverty.

9. The spirit of the Constitution of India is a Federal system of democracy but in practice it is being led to Unitary Type of system to achieve political and other ends of the ruling party.

In the end I request the Hon'ble Commission that the present system which is prevailing is ruining the democracy and the masses are gradually loosing their faith in this system. The Hon'ble Commission should find ways and means to make such recommendation that our Democracy should function in the real sense of the term and our Federal structure of Democracy be maintained in its true spirit.

Thanking you,

(Sd/-)

President

GOMANT LOK POKX

MEMORANDUM

Our Party, Gomant Lok Pokx, which contested the last Assembly and Parliamentary elections and got a sizeable number of votes, wish to place before you our views on granting Statehood for Goa for your consideration. At the outset we wish to state that the Statehood for Goa is long overdue and discussion on whether Goa should or should not be granted statehood is uncalled for in the present circumstances. People of Goa are peaceful by nature. This has probably been their drawback and the reason for not getting this demand met even after 25 years of Goa's liberation.

Briefly our reasons why Goa should have been granted Statehood are given below :

Historical Reasons

1. Goa, unlike the rest of India which was ruled by the British, was ruled by the Portuguese for over 450 years. Goa was liberated as late as 1961. Due to historical reasons, Goa has acquired uniqueness in all respects which has to be maintained. Goa is a homogeneous and well knit society and inspite of three main religions, the Christians, Hindus and Muslims have lived harmoniously for centuries. Pandit Jawaharlal Nehru, the first Prime Minister of India, recognised this unique aspect of the Goan society. He gave a solemn assurance to the people of Goa prior to and after Liberation that the uniqueness of Goa should and would be preserved, to the extent that Goans would be allowed to decide their own future. This view has been reiterated by all the other Prime Ministers who have followed him.

Opinion Poll

2. The Maharashtrawadi Gomantak Party, the first party which ruled Goa, influenced by political leaders from Maharashtra started canvassing for the merger of Goa with Maharashtra. All other political parties were vehemently opposed to this view. There was a heated debate over this issue which led to the holding of the first ever Opinion Poll in India in 1967 to decide whether Goa should be merged into

Maharashtra or not. The people of Goa, cutting across Party and religious lines, overwhelmingly voted against the merger of Goa into Maharashtra and Daman & Diu into Gujarat. This verdict of the people of Goa is binding on the Government of India.

Language of Goa

3. The only language understood and spoken by all sections of Goan society is Konkani, their mother tongue. Konkani is recognised as a full fledged language by the Sahitya Academy. The ruling Congress (I) Party has also unanimously passed a resolution to make Konkani the sole official language of Goa. It may be noted that no political party, including the Maharashtrawadi Gomantak Party denies the fact that Konkani is the only language spoken and understood by all sections of the Goan society, whether they are Hindus, Christians or Muslims. This fact is further confirmed by the usage of Konkani as the language of communication by the people coming from other states of India and who are settled in Goa. Other languages like English, Marathi and Portuguese are understood and spoken by some people as these languages are taught in schools but none of these languages are spoken or understood by all the people. All states have in the past been formed on linguistics basis. If linguistic considerations have been the criteria for the formation of States in India, then Goa has a strong case on that ground.

Statehood : Unanimous demand of all political parties

4. In the past the Maharashtrawadi Gomantak Party desired the merger of Goa with Maharashtra. The same Party has not only changed its stand after the Opinion Poll but is now forcefully demanding statehood for Goa. All other political parties, both regional and national, including the ruling Congress (I) Party, are unanimous on the demand of statehood for Goa. The people of Goa are solidly behind this aspiration and their view is unanimous. On three earlier occasions, the Goa Assembly passed resolutions to seek statehood for Goa. The Central Government has totally ignored these resolutions on grounds which if applied to the majority of the States in India, would disqualify them of their status. This attitude has created a feeling amongst the Goans that they are second class citizens not worthy of equal status with the other citizens of India.

Demand for Statehood : Economically Feasible

5. The demand for statehood for Goa is an economically feasible proposition. In spite of Goa being an Union Territory, the per capita grant-in-aid received by Goa is much lower than several other States, namely, Himachal Pradesh, Jammu & Kashmir, Manipur, Meghalaya, Sikkim and Tripura. The total grant-in-aid received by Goa is also the lowest. Besides, the Government of India is collecting about Rs. 150 crores annually as revenues by way of Central levies and duties. This system of collecting huge revenues without sharing the same in a proportionate manner is unjust. The Sarkaria Commission is requested to look into this aspect objectively and recommend just distribution of revenues between the Centre and the States.

Other Reasons

6. There are states, namely Sikkim and Nagaland, which have a smaller population than Goa. Manipur and Meghalaya have a population comparable to that of Goa.

The per capita income of Goa is second highest after Delhi. The literacy rate is also as high as 57%.

The Government of Goa has already placed before you the financial feasibility statement for statehood and we do not wish to repeat it.

Gomant Lok Pokx wishes to state that both Konkani and Statehood are very dear to the aspirations of the people of Goa. Any delay in granting statehood and giving Konkani its rightful place may only lead to mass discontent and instability in this area. The Party calls upon the Sarkaria Commission to consider all the aspects of this issue and recommend the grant of statehood for Goa, Daman & Diu. Gomant Lok Pokx also calls upon the Commission to devise a fair and equitable system for the distribution of revenues between the Centre and States.

INDIAN NATIONAL CONGRESS PARTY

Kerala Unit

MEMORANDUM

Respected Sir,

With all humility we would like to represent before this Commission that during the last Thirty four years of the functioning of our Republic the values and basic principles underlying our constitution have been eroded to a great extent. Our dignity and public justice have been subverted by forces having vested interests. Our States have been reduced to a second class native States we had during the British Raj.

It is high time to re-write the constitutional provisions regarding union and state relationships and also to re-align the relationship between Union and States. Of course we require a strong union for which strong states are highly necessary. This idea is not cherished by certain quarters because of their vested interests especially the political party which is ruling in centre. The framers of our constitution envisaged great ideas and long cherished desires, taking into consideration the teaming millions of our people who are even now below the subsistence level. Democracy from 1950 onwards with a Cabinet system of Government in India under West Minister model proved futile to solve the aspirations of our people at large.

India was never a united country at any time till 1950 as certain politicians and intellectual heralds. The divergent views, culture, languages, personal laws, the way of living etc., are evident for the same. Unity in diversity is a good slogan and its realisation is yet to come.

We have twenty two states which constitutes the union and our constitution provides for a cooperative federation of States with a bias in favour of a Union. The autonomy of states in this regard assumes

important considerations. The States are not merely subservient units of the union. Hence we demand that necessary constitutional changes are to be made forthwith for a cordial relationship with the states and the union.

Article 356 of the constitution is to be amended or taken away from the statute book because it gives undue power to the union Government to dissolve any ministry in a State as and when they intent under the guise of some false allegations. If it is not possible reasonable device should be inserted in the Constitution in order to prevent the mis-use of that provision. It is to be remembered in this connection that this power has been used and President's rule has been imposed on the States more than 70 times.

All the appointments to the important and big posts of this country touching the interests of the union and state relationship should be consulted with States and the consensus of the opinion should get prevailed.

The Governors should not be the Chancellors of the Universities. The State Government's recommendations to the appointment of vice-Chancellors should be carried out at any rate for which some instrument of direction should be provided.

The exhorbitant powers now vested with the Union Government should be de-centralised. The Union List should be amended and distributed accordingly to ensure such changes mentioned above. Developments require more involvement on the parts of the State Governments and sense of participation in developmental process assumes paramount consideration. States should not be the executants of the centres writs alone.

The State autonomy must not be met as a concession given by the centre. Salutary approach of the centre to this aspect is highly necessary.

Any authoritarian approach by the Union Government will hamper the unity of India. Costitutional morality and sense of justice are to be the guiding principles in dealing with the matters of the States.

The Industries and Commerce should remain state subjects and should be dealt with by States with wide powers. The Industries Development and Regulation Act of 1951 should be re-drafted and fare distribution to States should be given. At present 93% of the organised industry is under the control of the Union. It is highly necessary, the States should get their legitimate share over industries and commerce. Since India is an under-developed country this important aspect warrants serious attention of the Union Government.

Over centralisation is one of the main reasons for the poor economic development. Our economic growth is very poor. The average per capita income of the Indian citizen is too low. India is not a poor country, but with poor people.

The Governor should be appointed always with the consultation of the State Governments or in the alternative with the consultation of a high power body, specially constituted for this purpose, and the Governor should not be a subordinate or a subservient of the Government of India. It is also to be seen that a Governor should not be eligible for a second term of office as Governor or any other office under the Government. Provision should also be made to see that the Governor should not be removed except for proved misbehaviour after enquiry of the Supreme Court. The arbitrary denial of the assent of the State bills by the President should be changed. The indiscriminate use of this power should be checked by some machinery by providing guidelines.

Today there are two types of grants made by the Centre to the States. Grants-in-aid as recommended by the Finance Commission and the discretionary grants recommended by the Planning Commission, that is to say only 30% as per the recommendation of the Finance Commission and 70% with the advise of the Planning Commission. This is quite unjustifiable and grant should be divided to States by constitutional authorities like Finance Commission and not extra constitutional authorities such as Planning Commission.

At present the distribution of Taxes and Revenues between States and the Union is very unfair. The States are not getting the Corporation tax, as a result of the changes made by the Finance Act of 1959. This should be changed.

50% of the Central Excise duty should be transferred to the State. For the last three years the Centre stopped raising rates of Excise on items like Petroleum, Iron, Steel Aluminium, Coal etc. but only raised the prices. The entire benefits out of this increase goes to the Centre and the Central Govt. acquired more than six thousand five hundred crores in this regard and the States were deprived of not getting its share. As per the 7th Finance Commission report Rs. 2,600 crores would have come to the States. This anomoly is to be looked into with all seriousness it warrants.

The formation of an inter-State council under Article 263 is overdue. This should be done immediately.

Excise duties should also be made divisible between the Union and the States, on the same footing as Income Tax.

The State must be given a larger shares as tax revenue collected by the Centre instead of discretionary loan.

There should be some device for active cooperation among the States and their respective problems should be sorted out and settled then and there itself.

The survival of our Democracy depends upon constitutional morality. This vexed problem cannot be solved with Statute books alone. This important matter requires the benevolence, charity and the conscience and the values with the men who are in power at the Centre and their Chieftains in States.

THE KERALA CONGRESS (MANI GROUP)

MEMORANDUM

1. The Kerala Congress , presents its compliments to the Commission on Centre-State relations and offers the following suggestions on certain matters concerning Centre-State Relations.

2. Before we enter the subject, we wish to appraise the Commission that Kerala Congress stands for *democratic socialism.*

3. With this end in view we have chosen to suggest changes or modifications to some aspects of the existing administrative, legislative and financial relations between the Centre and the States.

4. The Kerala Congress is of the view that the changes and measures suggested in Centre State relations should be such as to protect the independence of the country and safeguard its unity and integrity. It is also of the view that the scheme and framework of the Constitution is basically sound. But with regard to the working of certain provisions of the Constitition, a better legislatives, administrative and financial relations between the Centre and States can be brought about by suitable amendments to the relevant Articles or introducing additional provisions.

5. The Constitution distributes the powers between the Union and the States. The powers of the Union and the States have been enumerated in three exhaustive Lists and residue is left with the Union. In order to give more federal character to the Constitution, the residuary powers should be given to States. In addition there is large scope for the Union Government to constitutionally intrude into the States' sphere and modify the independent functioning of the State Governments. This has to be checked and controlled by suitable Constitutional provisions.

6. The Union Government appoints the Governors. They hold office during the pleasure of the President. Therefore the Governor in effect becomes an agent of the Central Government. Although he has discretionery powers they are seen exercised to comply with the directions given by the Central Government. Therefore we suggest that suitable Constitutional provisions should be made to enable the Governor to discharge his duties without fear or favour. The Governor of a State should be appointed only with the approval of the Chief Minister.

7. There should be some restrictions on the executive powers of the Union, so that the initiative and the constitutional responsibilities of the States are not hindered.

8. Article 365 seems to confer sweeping powers to the Centre to take over the administration of the States for non-compliance with any direction given in exercise of the executive powers of the Centre. Such a situation can be brought about, if in any dispute between the Centre and the State, the State fails to toe the line of the Centre, The better solution will be to settle differences by bilateral discussions in an Inter-State Council. which can be formed under Article 263. This Council should have statutory powers, to make specific recommendations on matters under dispute, binding on the parties to the disputes. The composition, functions and powers of the Council can be determined by the Centre and the States.

9. The Planning Commission is now only a creature of the Union executive. It should be made a statutory body under the Constitution.

10. In order to put a stop to the misuse of the relevant provisions, Article 356 should be so amended as to exclude the subjective satisfaction of the Governor that the Government of the State cannot be carried on in accordance with the provisions of the Constitution. However, the failure of the elected legislature can be a ground for imposition of President's rule in State.

11. The legislative independence of the States is also limited, as enactments of vital importance are to be reserved for the consideration of the President. The President can veto the legislative measures if found not to the taste of the Centre. Therefore in matters referred to in List Two of Seventh Schedule, the State should have absolute powers to enact legislation. It is enough that such legislation need be reserved to the Governor for assent.

12. Regarding industries, the Centre assumed control, reversing the earlier trend towards decentralisation. At present over 90% of the organised industries have been brought under the control of the Centre. Applications for licences for large industries had to pass through multiple check-points on a long journey towards clearance. The present policy has resulted in economic concentration in certain areas to the detriments of industrially backward States. It is our view that States should have complete freedom to establish industries without being subjected to the restrictive controls exercised by the Union.

13. Finance is an important aspect in Centre-State relations. The financial autonomy of the Centre and the States is vital to the preservation of the federal principle. Except sales tax, all other elastic resources of revenue are retained by the Centre. The State Governments should have independent and adequate sources of revenue for their proper functioning.

14. If one looks at the flow of resources from the Centre to the State only 40% of the resources are as a result of the Award of the Finance Commission. The rest is received from the Centre as in the form of plan assistance and discretionary grants or loans. This shows the economic dependence of the State on the Centre and the State's difficulties to raise sufficient resources to maintain certain standards of administration and perform fiscal functions in their sphere. It is well recognised that revenue sources of State Governments granted by the State List is insufficient to meet their financial requirements. Most of the State Governments are on heavy overdrafts to make both ends meet. It is better to have a division of financial powers between the Centre and States within their own spheres.

15. In financial adjustments between Centre and States through sharing of taxes, grants-in-aid and loans, it is important to device certain measures which would ensure adequate resources to the State Governments. *For this purpose under the devolution of taxes all major items should be made available. The grant component of Central assistance should be enhanced and the loan component reduced, or totally eliminated.*

16. Keeping in view the financial requirements of the State Governments and the need for development, fresh guidelines will have to be evolved for the distribution of market borrowings between the Centre and the States. The present ad-hoc allocations are largely in favour of the Central Government.

An independent body like a Loan Council can evolve a better formula for market borrowings. States which earn foreigh exchange through export of man power and cash crops, deserves special consideration in the allocation of the share of market borrowings.

17. Another problem faced by the State Government is the rising prices of commodities, over which they have no control except to operate the public distribution system. Public distribution mechanism can only help, provided the commodities are available at reasonable prices from withing the country or outside. Often the prices of the commodities, essential or otherwise, are on the high side, due to inflationary pressures. With rise in price of commodities cost of living index will also rise, compelling the State Governments to provide additional D.A. to their employees. Whenever the Central Government compensates its employees with additional D.A. the same should be given to State Governments employees also. The resources of the States are eroded as a result of granting Additional D.A. For example, from 1980 onwards the Kerala Government had given Rs. 474 Crores as Additional D.A. to its employees. This is a serious drain on the State's resources which should engage the attention of the Commission. The State's commitments on this account should be fully compensated by the Centre.

18. We earnestly hope that the Commission on Centre-State relations will give serious consideration to our suggestions and that its recommendation will bring about a better socio-economic equilibrium in the country as a whole.

KHASI HILLS AUTONOMOUS DISTRICT COUNCIL

MEMORANDUM

Memorandum submitted to the Sarkaria Commission by the Executive Committee, Khasi Hills Autonomous District Council, Shillong on the occasion of its visit to Shillong from 29th September, 1985 to 2nd October, 1985.

Respected Sir,

I, on behalf of the Executive Committee, Khasi Hills Autonomous District Council, Shillong hereby express our thankfulness for having been invited to have a discussion with the Commission in regard to the existing arrangements between the Union and the States in regard to the powers, functions and responsibilities in all spheres.

In this connection, the relationship between the Union and the States is hidebound that any solution to the warranting changes of the existing arrangements will not be complete without taking into consideration the problems faced by the District Councils in this North-eastern region.

With due respect, we take this opportunity to submit to the Commission this memorandum representing a few among the various problems of this Autonomous District Council in running the administration. We believe that the learned Commission is not unaware of the circumstances, aims and objects in the creation and existence of the District Councils during the composite Province/State of Assam in the 1948—50s.

In so far as the Khasi Hills District is concerned, the erstwhile Khasi States plus other area constitute this Autonomous District comprising the Districts of East and West Khasi Hills. The Khasi States which have in the past been maintaining their own freedom by virtue of their Treaties and Sanads in signing the Instrument of Accession sometime in 1948 while the Constitution of India was in the making, does not mean cession/merger of their territories to the Indian Union and for that matter to any State. To be more clear, we would invite your kind reference to Paragraphs 112, 113 and 114 of the White Paper on Indian States of the Government of India Ministry of States wherein it has been specifically emphasized that the Khasi Hills States along with the other tribal district of Assam known as Jaintia Hills District have been constituted into a separate Autonomous District of Assam known as the United Khasi and Jaintia Hills District under the provision of the Sixth Schedule to the Constitution of India as comoborated in the judgement of the Hon'ble Supreme Court of India in the case No. C.A. 394 of 1960—T. Cajee, Chief Executive Member (Appellant) versus U Jormanick Syiem and another (Respondent). The founding fathers of the Constitution of India, with due regard to the distinctive characteristics of the culture and way of life of the tribal people of this upland Region thought it proper to provide a special provision in the Constitution of India, giving them ample opportunity to grow in their own roots and according to their genius and culture. Thus the District Councils did not just come out from nowhere but emerging from the Constitution of India itself and are not even statutory bodies just as those now coming up in Manipur and Tripura.

According to the Sixth Schedule to the Constitution of India, the District Councils are autonomous bodies or in other words, miniature State having all the requisites of a Government, consisting of the executive, judiciary and legislature. I feel, therefore, that there should not be only Union and State relation but also Union, State and Autonomous District Council relation.

The Executive Committee, Khasi Hills Autonomous District Council in submitting this memorandum to the Commission does not have the least intention of maligning against the State Government of Maghalaya, but only to project the ethnical, cultural, traditional, etc. problems we are facing in this part of the North-East region. Since its very inception, this District Council has all along been trying its level best to maintain the form and scheme of administration as contamplated under the provisions of the Sixth Schedule to the Constitution of India. But due to the limited resources of this Council, we are financially handicapped, apart from other factors, to keep the wheels of administration running smoothly. The District Council being a constitutional body, we have every right to think and expect that the Government cannot just look and see the Council flounder and sink.

With due regard to the impact of the long pending and unsettled boundary dispute between the Khasi Hills Autonomous District Council, the State Government of Meghalaya on the one side and the State of Assam on the other side on the administrative jurisdiction of this District Council over the areas encroached by Assam and the resultant hardship affecting the destiny of the people of this State and especially the indegenous tribal people over whom this Council is having administrative jurisdiction, the Executive Committee submitted a memorandum on the 25th February 1985 to the Governor of Meghalaya for a an expeditious settlement of this vital issue. It is highly appreciable that the Government has taken initial necessary steps in this matter. In this connection, however, it is claimed that this Council be involved to safeguard its constitutional rights, and also for the socio-economic welfare of the people of this District. The stand of this District Council in this regard is that it does not accept the boundary description as lastly notified in 1876 and its interpretation from time to time is wrong and unacceptable as the said Notification does not include vast areas originally belong to the Khasi States.

The Khasi Hills District comprises all the areas formerly known as the Khasi States plus other areas as defined in Paragraph 20 of the Sixth Schedule to the Constitution of India, excluding any areas for the time being comprise, within the Cantonment and Muncipality of Shillong, but including any areas of the Khasi States bifurcated and attached to Kamrup District by the British Regime for administrative convenience.

Sometime in 1982 a Commission under paragraph 14 of the Sixth Schedule to the Constitution of India was constituted under the Chairmanship of Sri. S. K. Dutta, retired Chief Justice of Gauhati High Court to enquire into the affairs of the District Councils and to suggest ways and means for their betterment. This Council through its memorandum dated 11th July 1984 furnished the necessary information regarding its executive functions, legislative measures, etc. relating to the matters as provided under the provisions of the Sixth Schedule to the Constitution of India, in addition to other difficulties econountered by it in the course of administration. It is understood that the Commission has completed its work and submitted its Report, a few months back, but for the non-receipt of the Report, we are in the dark as to the findings of the Commission. Since the Report deals exlusively with the affairs of the District Councils, the same should have been made available to this and other District Councils.

Over and above that has been stated, this Council has to face problems and hurdles that many of the laws framed by the District Council, namely, 1. The Khasi Hills Autonomous District Council (Cattle and other animals Taxation) Regulation, 1982, 2. The Khasi Hills Autonomous District Council (Khasi Social Custom of Lineage) Act, 1980, 3. The Khasi Hills Autonomous District Council (Inheritance of Self Acquired Property) Act, 1980 and 4. The Khasi Hills Autonomous District Council (Primary Education) Regulation, 1980 are lying pending for a considerable period of time with the Government for Governor's Approval/Assent as the case may be without adducing any reason thereof. We believe that the Commission is not unaware that the power/s of the Council has already been curtalied by the amendment of the Sixth Schedule under the Assam Reorganisation (Meghalaya) Act, 1969 and the North Eastern Areas (Reorganisation) Act, 1971 reducing the autonomy of the Council and giving ample opportunity to the State Government to encroach upon the domain of the District Council. For example, this Council as already mentioned above has made law on the inheritance of Self Acquired Property, but regardless of this fact, the Government has presented a Bill entitled "The Khasi-Jaintia Succession to Self Acquired Property (Special Provision) Bill 1984 in the June 1984 Assembly Session without consulting the District Council concerned and without giving any information of the fate of the Council's Bills.

It will not be out of place to mention that the Khasis have quite a distinct culture, different land tenure and a democratic way of governance and that the Chiefs of the Khasi States are not territorial sovereigns. This goes to explain why there was no Instrument of Merger, but if the District Council is made subordinate of the State Authority as is envisaged in para 12-A of the Sixth Schedule, then it is afraid that the main root of being a Khasi is gone. Secondly, if in a matter of succession the State having a mixture of different stocks will make law for a Khasi, then where is the freedom to govern according to our own culture and genius ?

Since long time back the need for amending the Sixth Schedule has been keenly felt to strengthen the administration of the District Councils and as such, a conference of all the Chairman and the Chief Executive Members of the District Councils of the North Eastern Region was held at Shillong on 29th Jan., 1981. After threadbare discussion of the pros and cons of the Sixth Schedule as it is, the conference have drawn up a set of proposed amendments of the said Schedule which they feel would adequately strengthen the administration in the Autonomous Areas, a copy of which is enclosed herewith for favour of perusal and consideration.

In conclusion, we are constrained to state that there is a lack of harmony in so far as the relationship is concerned between the District Councils with the State Government and the Union.

We, therefore, crave indulgence to reiterate for the amendment of the Sixth Schedule as felt needed by the concerned District Councils and that the administration of the Council should be unfettered and without undue interference from any unconcerned quarter so as to being a close relationship between the District Council and the Governor; and that the boundary of the Khasi Hills District should be defined and clearly demarcated to avoid choatic condition in the administration because as it is at present, the Khasi community has the feeling that they are being suppressed and are

discontent of the state of affairs since the last decade which is aggravating and may cause disturbances at any time.

We, therefore, look up to your goodself to go deep into the matters as brought out in this memorandum in their true perspective and try to understand the rights, sentiments and special character of the "Khasis" to bring about peace, harmony orderliness of the country and ultimately to foster and cement the unity and integrity of our country, India.

We wish the Commission the best of health and success.

Sd/-

Chief Executive Member

Proposed Amendmens to the Sixth Schedule to the Constitution of India

ARTICLE	AMENDMENTS
SIXTH SCHEDULE	
Para 1	Para 1—In sub-para (2) of Para 1 insert the words "In consultation with the District Council concerned" in between words "the Governor may" and "by public notification".
Para 2	Para 2(1)—(i) In the fourth line of sub-para (1) of para 2 insert the following words "on" the recommendation of the District Council concerned" in between the words "by the Governor" and "and the rest"; (ii) Add the following proviso to the sub-para (1) of Para 2. "Provided that no person who is not a scheduled tribe of any autonomous district of the state of Assam or Meghalaya or Mizoram as specified in Part I, II & III of the Table appended to para 20 as the case may be, shall be eligible for election to the District Council".
Para 3	Para 3—The whole of para 3 shall be deleted and the following substituted : "Powers of the District Council or Regional Councils in respect of land, minerals and other relating to town or village administration, social and customary practices". (1) Control of all lands within the Autonomous District shall vest in the District Council or Regional Council as the case may be, and the District Council or Regional Council shall have power to make laws in respect thereof and with particular reference to :— (a) the allotment, transfer, occupation or use, or the setting apart/and registration of land for the purpose of agriculture or grazing, or for the preservation of forests or for residential or non-agricultural purposes likely to promote the interests of the inhabitants of any village or town : Provided that nothing in such law shall prevent the compulsory acqusition of any land, whether occupied or unoccupied, for public purposes by the Government of Meghalaya, Assam or Mizoram in accordance with the law for the time being in force authorising such acquisition : Provided further that the consent of the District Council or Regional Council concerned has previously been obtained by the Government of Meghalaya, Mizoram or Assam for such compulsory acquisition; (b) the control or management of any forest ; (c) the regulation of the practice of Jhum or other forms of shifting cultivation ; (d) the establishment of village or town committees or councils and their powers ; (e) any other matter relating to village or town administration, including village or town police and public health and sanitation ; (f) the appointment or succession of Chiefs or Headmen and their powers and functions ; (g) inheritance of property including allotment, transfer, registration occupation, use or ownership of property consequent upon the marriage of a tribal to a nontribal; (h) marriage and divorce ; (i) social customs and usages including customary law and practice ; (j) fishery ; (k) (i) markets and fairs ; (ii) establishment or construction of shops or stalls. (2) The District Council shall also have power to make laws with respect to :— (a) the use of any canal or water-course ; (b) read transport and ropeways ; (c) trade ; (d) the manufacture, sale or prohibition of liquor ; (e) registration of documents ; (f) court fees and stamps ; (g) protection of wild-animals and birds ; (h) elephant mahals ; (i) the acquisition of land. (3) All laws made under this paragraph shall be submitted forthwith to the Governor and, until assented to by him, shall have no effect.

ARTICLE	AMENDMENTS
Para 6	Para 6—Delete the word "Previous" occurring in the fourth line of subpara (1) of para 6 in between the words "with the" and "approval".
Para 8	Para 8—(1) At the end of Paragraph 8 (1) and after the word "generally" insert the words "until such time as the District Councils have not framed their own laws". (2) In paragraph 8 insert the following as (c) of sub-paragraph (3) ; "(c) tax, royalties, cess, duties and fees on minor minerals and on produces from forests other than reserved forests and fees on other subjects within the legislative and administrative power of the District Council". (3) In paragraph 8(4), insert the word "Law" in place of the word "regulations" wherever it occurs.
Para 9	Para 9—Add a new sub-para (3) to para 9 as follows :— (3) "Notwithstanding anything contained in sub-paras (1) and (2) of this paragraph, the annual share of the royalties payable to the District Council concerned shall be made over to that District Council within a period not beyond one year from the date they accrue".
Para 10	Para 10—In the last line of the second proviso to sub-para (2) of para 10, delete the words "the time of the making of such regulations" and substitute the same by the words "the inception of the District Council".
Para 12	Para 12—Delete paras 12A & 12B and add the words "Meghalaya and Mizoram" after the word "Assam" wherever occur in para 12.
Para 20	Para 20—Delete para 20(2), including the proviso, and substitute it with the following :— "The Khasi Hills District shall comprise the territories which before the commencement of this Constitution were known as the Khasi States and the Khasi and Jaintia Hills District, excluding so much of the areas comprising the Jaintia Hills Autonomous District, constituted under notification No. TAD/R/50/64, dated 23/11/64, read with notification No. DCA 31/72/11, dated 14-6-1973". (*Explanation* : The words "Mizoram" and "State" in relation to the Union Territory of Mizoram whenever used in these proposed amendments shall refer to the Union Territory of Mizoram and the word "Governor" shall refer to the "Administrator" of the said Union Territory).

(B. WANNIANG)

C.E.M. & Chairman of the Conference.

MALAYALEE DESHEEYA MUNNANI

REPLIES TO THE QUESTIONNAIRE

We are happy that the Government of India even though belatedly, has taken cognisance of the problem of centre-state relations. But the Commission has recorded the poor response it received from the present and former Chief Ministers for its request to send their memoranda on the Subject. This fact reveals that ruling parties are not public-conscious enough to assist the Commission by expressing their views on such an important question facing the country. The terms of reference stated in the notification of the Ministry of Home affairs (No. IV/11017/1/83-C.S.R. dated the 9th June 1983) says "In examining and reviewing the working of the existing arrangements between the Union and States and making recommendations as to the changes and measures needed, the Commission will keep in view the social and economic developments that have taken place over the years and have due regard to the scheme and frame work of the constitution which the founding fathers have so sedulouly designed to protect the independence and ensure the unity and integrity of the country which is of paramount importance for promoting the welfare of the people".

In this context we are of the opinion that if the Government feel that there should not be any change in the constitution of India for the restructuring of the centre-state relations the Commission's exercise will be futile. The above-quoted part of the terms of reference creates a doubt that the Government does not want any changes in the constitution for improving the present sorry state of centre-state relations. Since the constitution itself provides for changes, we take an optimistic view that the commission will recommend for necessary changes in the constitution if it deems it necessary for a scientific rational restructuring of centre-state relation consistent with the aspirations of the states and its people.

Indian constitution has to be changed into federal one. The following changes we suggest :

(1) The Governors of the states should be elected by the people of the states directly on the basis of adult franchise.

(2) The President of India should be elected by the electoral college consisting of only members of the state legislature.

(3) All the states should have equal number of representatives in the Rajya Sabha.

(4) Number of Rajya Sabha members should be more than Lok Sabha members. This change can be effected by reducing the number of Lok Sabha members or increasing the number of Rajya Sabha members.

(5) Whenever the Rajya Sabha rejects a bill passed by the Lok Sabha a combined session of both the houses should decide the issue.

(6) All the powers should be left to the State list except Defence, Foreign Policy, Post and Telegraphs, Railways and currency.

(7) Presidential form of Government under a genuine federation should be established.

(8) **Official language policy.**—Imposition of Hindi as the official language of the country is an irritant in the field of Centre-State Relations. English should continue as the official language. At the State level, mother tongue of the people of the State should be the official language.

Above proposals require drastic change in the constitution. Therefore convening of a new constitutent assembly for the purpose will be the appropriate step.

In 1946 members of the Indian Constitutent Assembly were not elected on the basis of adult franchise. More over most of the native states were not adequately represented in the constituent assembly. Therefore present constitution is devoid of popular democratic base. Therefore convening of a new constitutent assembly to adopt a new federal constitution is desirable.

PART I

INTRODUCTORY

1.1 Our constitution cannot be called a federal one. The main features of a federal constitution are :

(a) It should be an association of states.

(b) There should be a division between general (Central) authority and regional (state) authority.

(c) The general authority and regional authority should not be subordinate to each other but coordinate with each other.

The last is the main feature of a Federation in the traditional sense. But in the Indian Constitution regional authorities are mostly subordinate to the general authority.

1.2 Rajamannar Committee has demanded more powers for the states. We consider that much more powers for the states than envisaged by the committee, are necessary for the smooth functioning of a federal polity. We are of the opinion that only interstate disputes and constitutional matters should be left to the jurisdiction of the Supreme Court of India.

1.3 In a country like India which is not only heterogenous but also multinational, a highly centralised constitution is undesirable. Only a federation giving optimum autonomy for constituent states could be efficient and workable. Peoples with divergence in language, culture and economic conditions should be governed by their respective state govts enjoying optium autonomy. Only in matters of Defence, Foreign Policy, Currency, Post and Telegraph and Railways, the general Government should have jurisdiction.

1.4 Whichever country has tried to impose a unitary form of Government on nationalities divergent in culture, language, history and economic conditions it has disintegrated. The countries which started with a loose federation depending on goodwill, mutual trust and voluntary association, has slowly achieved integration. Examples are the United States of America and Switzerland. The traditional federations have successfully functioned and they have progressed towards understanding, integration and unity. The unitary form of Government imposed an heterogenous nationalities have failed and ceased to exist. Recent example is Pakistan, Austro-Hungarian empire did disintegrate. Irish seceded from the United Kingdom of Great Britain. Poland seceded from prebolshevik Russia.

The genuine Federations, due to their success developed into united and cohesive states. Centralised unitary states imposed upon unwilling people have disintegrated and ceased to exist. The former by its success and latter by its failture exists only in abstract theory.

1.5 The constitution is not sound. It will not endure for long. It cannot be improved by window dressing amendments here and there. It require drastic changes. It should be changed into a genuine federation. The federal Government should confine itself to Defence, Foreign Policy, Currency, Post and Telegraph and Railways.

1.6 Articles 256, 257, 354 to 357 are negation of the autonomy of the states and contrary to the federal principle. We suggest entire redrafting of the constitution and so these provisions should not be in the new constitution.

1.7 The reorganisation of states of India on linguistic basis in 1956 was a reasonable policy and it is consistent with the aspirations of the people. However there are pockets of linguistic minorities existing in various states. These areas of lingustic minorities should be merged with the states where people speak the same language, if the areas are contiguous. After settling these issues of linguistic minorities, there should not be any change in territories. The Centre's powers (Article 3) in this respect should be deleted from the constitution.

PART II

LEGISLATIVE RELATIONS

As stated earlier all the powers except Defence, Foreign Policy, Currency etc. should be with the states. Residuary powers also should be with the states.

Since we visualise a genuinely federal constitution, most of the questions in Part II are not relevant.

PART III

ROLE OF THE GOVERNOR

The Governor's office should be made elective. Governor should be elected by the people of the respective states, on the basis of adult franchise.

The political instability, in the states due to ephemeral coalitions of political parties having divergent views and policies, is a great problem facing our country. This can be solved by having elected governors with popular base. Even when the ministries at the state level fail and no party is capable of forming the government, there won't be a crisis in the state administration. The governor can run the administration without being accused of undemocratic, since he is elected by the people of the state.

3.5 It should be made mandatory that the governor should give assent to all the bills passed by the State legislature. Only in cases where the advocate general of the state advices the governor to refer the bill to the high court, or Supreme Court, he should wait till the respective court clears the bill. Only when the respective courts question the constitutionality of the bill, the governor should withhold the assent.

3.7 The elected governor should have the full 5 year term. Procedure of his removal should be the same as of the judge of the Supreme Court.

3.8 The Governor should be empowered to summon the legislative assembly. He should varify whether the ruling party has majority or not. It should be tested only in the legislature, by the result of the confidenence motion or no confidence motion.

3.9 The West German practice is not desirable. In the case of India, if we introduce the system of elected governors, the administration will, smoothly continue, whether there is a ministry or not.

PART IV

ADMINISTRATIVE RELATIONS

4.4 The President's Power under article 356 should be deleted from the constitution. In case where the state has no party with a majority in the state legislature, the Governor should be given the power to "assume to himself all or any of the functions of the state" by a proclamation.

The article should be deleted because it is a negation of state autonomy and federalism. Moreover the ruling party at the centre has misused the provision for dismissing the state government of an opposition party. Instances are : In 1952 PEPSU Government was ousted by the Centre. In 1959 the Communist government of Kerala was dismissed. In 1975 D.M.K. Government of Tamilnadu was dismissed. In Gujarat, Babu Bhai Patel Government in the same year.

Instead of Presidents rule, there should be the governor's rule—the rule of an elected state governor. The election commission should conduct election within one year.

4.7 No central agency like Central Electricity Authority and Director General of Technical Development should be established without the consent of the states. Each state should have power to apt out of such organisations. Authorities like inter-state Hydroelectric projects may be established only by mutual agreement between beneficiary or affected states.

4.8 There is no need for All India Services like I.A.S., or I.P.S. in a federal polity. The States should have class one services of their own. For administration of limited port-folios like defence and foreign service the federal government could have there own services. But a central service should not be imposed on states.

4.9 The power for the Centre under article 355 to use the central reserve police and other armed forces should be deleted. If the concerned states request other states or centre it may be allowed to send armed forces, in a critical situation.

4.10 News papers, books and printing should be in the state list. Radio and television should be controlled by an autonomous agency which consist of representatives of all the states.

4.11 The Zonal councils have not worked satisfactorily till today. It can be activised for discussing problems and issues of mutual interest to member states.

4.12 Such institutions should be established voluntarily by member states.

It should not be imposed by the Parliament. If states deem it necessary, they can have an independent secretariat.

PART V

FINANCIAL RELATIONS

5.1 An objective review will reveal, the scheme of devolution has not worked satisfactorily in the matter of many undeveloped and semi-developed states. In the initial stages, the allocation from the centre to the states from the divisible pool as well as *indivisible* were devoid of equity. The State governments having chief ministers of stature or strong influence got the maximum allotment from the centre. Especially discretionary grants and loans went to the states having powerful chief ministers of the ruling party. They secured substantial and undeserving assistance from the centre.

Certain chief ministers who were convenient to the ruling clique at the centre by liaisoning and influence secured much more finance than what they are entitled.

To avoid discrimination and allegation certain formulae were worked out. But the formulae itself have worked to the advantage of certain states and handicap for certain other states. Take for example the criteria for backwardness. Formulae treated district as a unit. But paradoxically some advanced states were having many backward districts also within its territory. Therefore, funds went again to the most developed states which had very backward districts also. In the name of helping backward districts, further funds went to the most advanced states having a few backward districts, at the cost of backward and undeveloped states.

For measuring backwardness, a state as a whole should be taken as a unit—not the district.

The location of central sector Industries are also decided on political and party considerations, rather than, economic, social and development factors.

5.2 The spoon feeding of states by the centre have not only resulted in loopsided development and regional disparities, but also has created psychological retardment for states. Self reliance of peoples of the states are eroded.

Economic development takes place not by bread alone. It is achieved by morale, self reliance and other non-physical factors also. Therefore taxation by the centre and its spoon feeding of states should be given up. All the taxes like excise should be left to the states.

In a genuinely federal set-up where all the subjects except, defence, post and telegraph, railway, foreign policy and currency are under the jurisdiction of the constituent states, the states will become self reliant. They will develop according to their own genius.

The centre's expenditure for foreign affairs and defence should be contributed by the states. Income from post and telegraph and railways can be used by the centre.

Even customs duty and foreign exchange should be administered by a finançial council consisting of all of the states. After contributing to the federal expenses, propotionate to the population of each state, the balance if any, should be given to the states on the basis of each states export-import volume.

5.3 The disparities between states cannot be reduced by having a strong centre. A strong centre will be the instrument of advanced states, for perpetuating their hegemony. The ruling party at the centre may stiffle the development of states ruled by opposition political parties or regional parties. Concept of social and economic justice varies from time to time and country to country. In India the greatest economic reality is not the gap between rich and poor classes but the gap between rich and poor states. The disparity between have-states and have not-states has to be reduced. Economic development, especially industrial development of constituent states has to be initiated in the case of certain states and accelerated in the case of certain other states. The whole planning has to be done by the states. In the present set up, the centre allots money on sectoral basis. Instead it should be allocated to the states on the basis of an equitable formula. The states should be free to decide what priorities to be given to which sector (large industry, medium, small, agriculture, communication etc.)

If the constitution is drastically changed in favour of a genuine federal one, as we have suggested earlier, this problem will not arise at all. The states will have the major resources and they will have the powers to decide what they should do with the resources they are having.

5.4 The development policy matters should be left to the states. Then these questions will be decided by each state. The revenue gaps are due to wrong planning, over emphasis and expenditure on unprofitable public sector and unnecessary administrative expenditure on civil service. All these should be given up and there won't be any deficit.

5.5 & 5.6 These questions are irrelevant in a federal set up we have suggested.

5.7 The Central taxation system works to the advantage of the richer states. States should have all powers of taxation. Moreover industries and agricultural products should be given tariff protection by respective states. For example tyre and rubber products manufactured by advanced states destroy Kerala weaker nascent rubber product industry. Kerala should levy tax on raw rubber going outside the state. If the rubber is processed here, there should not be any tax. Similarly finished rubber goods produced elsewhere and to be sold here should be taxed by Kerala state. Only in these conditions local industry would develop. If octroi is constitutional, this type of taxation policy also is constitutional. If, Indian industry in advanced states in India were exposed to competition from advanced countries in the world, even after Indian independence, those industries would have collapsed. Ambassador cars would have remained unsold. Indian textile products would have been competed out of the market by Hongkong, Japanese or Taiwan products. Only by tariff protection, the so-called developed Indian industry progressed. Similarly nascent industries in backward states should be given a short of tariff protection from products of monopolistic industries from the advanced states.

5.8 All the major taxes should be levied by the states. In that case the question is irrelevant.

5.9 In a federal polity, visualised by us, the taxation powers as well as planning will be with the states. The federal government will be receiving contribution to its fund from states, proportionate to their population and other important factors. The federal finance and expenditure should be supervised by a council, consisting of representatives of the states.

5.10 The transfer of funds from the union to the states has never promoted efficiency. All central bodies, including planning commission have no understanding of regional realities. The funds were very often wasted by the states. Schemes drawn up by the Central bodies are often unsuitable to the local situation. The planning commission is a body with no accountability to the elected representatives of the people. It is against all principles of democracy, that a body with no accountability to the people allocate funds and decide the economic policy of the country. Planning commission in the present form should be scrapped.

5.14 Since we envisage a federation in which states levy most of the taxes, the issue is not relevant. In the case of bearer bonds, and similar revenues, it should come under the divisible pool.

5.15 Fortunately, there is hardly any surplus in the public sector. Therefore the question does

not arise. All public sector except defence industries, P. & T. and Railways should be in the state sector.

5.16 We visualise a federal constitution in which most of the powers and tax revenue will be with states. Therefore the present indebtendness of the states would not be there in a genuine federation.

5.19 Even foreign loans should go straight to the states from agencies like World Bank, I.M.F. and consortium of aiding countries. The states should be left free to negotiate with foreign countries, and receive loans. But a council having the representatives of the states and federal government should evolve mutually agreed guidelines. Subject to these guidlines states should be free to borrow from abroad. Th present system of centre functioning as a finance broker should be given up.

5.20 The Loan council suggested, should be a specialised department of the Reserve Bank of India. Proposal is welcome.

5.22 Most of the states have reached their limits in tapping their local resources. The states go for further taxation will push up prices and add to the high cost economy.

5.23 There is tax evasion-not leakage-in a very big way. The centre failure to collect taxes due to political reasons, is responsible for tax evasion. The performance of the public sector is dismal. Only defence industries which has a bearing on the security of the country and industrial infrastructure should be in the public sector. In the initial stages of development private sector should be given the responsibility of industrialising the country. But it should function within the guidelines set by the states. Monopolies in the public as well as private sector should not be permitted.

5.24 Only with agreement of the states, Union government should levy taxes coming under article 268 and 269.

5.25 Major tax revenues are with the centre at present, and the states get paltry funds from the centre. Whenever the states make attempts to levy new taxes or increase the rate of taxes, people already over burdened with various taxes make a hue and cry. The State governments which are in close contact with the people become unpopular. The cumbersome process of centre leavying taxes and states going to the centre with begging bowls is time consuming and result in wasting of time and energy. Therefore as we have suggested earlier, all powers of taxation should be left with the states. But taxes on railway fares and goods should be levied by the centre in consultation with the states and should be distributed to the states.

5.27 The Union territories also should get all forms of allocation from the centre on a par with other states.

5.29 The nationalised banks should be split up. Every (1) & (2) state should have a public sector bank. All the state's banks should be represented in a central council to be constituted. They can help each other and those should be governed by guidelines formulated by central body to be formed.

(3) Authority for the Industrial Licencing should be given to the States. There can be a federal council representing the States, for guidance to the states. Federal Council should work for avoiding superfluous efforts in industrial ventures and promoting mutual co-operation. After studying the requirements, and resources, the council should fix maximum installed capacity for each industry, to avoid over production. On a selective basis certain categories of Industries can be delicensed. When the total production reaches the maximum level fixed by the council, the states should not allow more units in that sector.

The present licensing system has contributed to a great extent the mounting corruption in the country. Favouritism and bribery are mainly the results of the present system of licensing.

5.32 In a federal system, Central financial institutions like the Life Insurance Corporation, General Insurance Corporation and Unit Trust of India also should be reorganised on states basis. At present the large funds of this organisations can make and un make large companies and-its managements. New investment policy of those institutions are decided by the centre. All these organisations should be reorganised on state basis and control should be given to the State Finance Ministry instead of Central Finance Ministry.

NAMADHU KAZHAGAM

MEMORANDUM

Introduction

Before giving my answers to the Questionnaire supplied by you, I would like to suggest that some more questions may kindly be added to the questionnaire to arrive at a fair finding.

The Indian constitution of course was framed after careful consideration and elaborate discussions in the constituent Assembly. But from our actual experience, it is quite evident that our constitution had not served or fulfilled the aspirations of the people living in various regions or areas-of our sub continent which is composed of various nationalities based on diverse languages, cultures and customs. It has also failed to take note of the political demands of the people of various regions. Regional autonomy and its consequences were not not studied deeply and properly at the time of framing the constitution. Though the authors of this constitution were learned Lawyers, eminent Jurists and West-oriented politicians, they have failed to observe and study the real demands and sentiments of the people living in various regions of this country.

It was a time of serious test and turmoil in this country, created by the partition of Pakistan and India, when the Indian Constitution was framed and placed before the constituent Assembly. Worried over the disintegration of the country, the the Fathers of our constitution had to take extra precaution to see that this country does not disintegrate any further. So, they curtailed the powers of the states so as to prevent any such demand in

the future and concentrated enormous powers in the centre, making the states merely subordinate subservient units of the centre.

The states and provinces were formed in such a way without any guiding principle or imagination to reflect the aspirations and feelings of the people but keeping in mind only the administrative convenience. This was a calculated move on the part of the Congress Politicians just to suppress the regional feelings and aspirations that may creep in, in the due course.

While the undivided Madras Province consisted of Andhra Pradesh, Tamilnad and Malabar the Congress Party was having separate party unit as Tamilnadu Congress Committee and so on ; when the state administrative unit was one, the party units were many. So also, the Greater Bombay consists of Maharashtra, Gujarat etc., so the states were not formed on linguistic basis by the constitution makers but they did so purely for administrative convenience.

These aspects were not anticipated at the time of framing the constitution. To achieve these objectives people of various regions had to wage struggles, and make sacrifice of human lives ; then only centre agreed to consider reorganisation of states on linguistic basis.

Another, serious and depressive aspect of this constitution is the neglect of regional languages by not giving equal status for all the languages. Mother tongue is holy and dear to everybody. People worship their languages. Theri mother tongue, their culture are supreme to them. But instead of honouring the sentiments of all the people, Indian Constitution made Hindi supreme and thrust it on Non- Hindi areas which caused the mass upsurge in some areas against this type of imposition. The division of India in 1947 into 2 states as India and Pakistan based purely on religious majority could not survive ; because Pakistan though one Islamic state could not withstand for a long time on the basis of religion. The imposition and domination of urdu on the Bengali spoken area of Paksitan, without understanding the sentiments of the Bengali people became the root cause for a civil war and disintegration of Pakistan with the birth of Bangla Desh. Imposition of Hindi on Non-Hindi people will have similar fate. This is a historical lesson.

The above mentioned incidents are standing evidence for the faulty judgement of the centre in uniting India by neglecting various regional languages and culture, treating Hindi and Hindi belt alone as supreme. Shri B. N. Rao, the eminent jurist was deputed by the Constituent Assembly to tour countries like U.S.A., Canada, Ireland, Britain etc., but Alas ; it is regrettable that no idea was mooted out to tour various regions of this country to study the feelings and aspirations of the people of this country.

I should like to enumerate vital drawbacks in the Indian Constitution. These drawbacks will clearly indicate that the aim of the constitution makers was not to bring a federal constitution for the country but a unitary one. Many of the federal features, as found in various constitutions in some other countries are introduced in our constitution but cleverly ways and means are effectively provided to curb the constitutional rights of the states by the centre and use its discretion. Article 356 of the constitution is a standing instance. In this way no state can enjoy the constitutional rights freely, and the centre can curb the legal rights of the States with the help of the ample provisions of the constitutions.

Our constitution is not federal in nature that the powers are centralised and the states are in a sub-survient position. Some of the provisions of the constitution will clearly prove and illustrate that our constitution is not a federal one. They are :

A. States were not reorganised on liguistic basis at the time of the framing of the constitution.

B. Equal states for all regional languages were not provided in the constitution.

C. Imposition of Hindi as official language for the centre is provided in the constitution. In a multi linguistic country and the imposition of one particular regional language on the entire country of different languages is a clear proof that it is not a federation.

D. The appointment of a Governor for a particular States is at the discription of the centre and the state have no say in the appointment of the Governor. Mostly other state persons are imposed as Governors.

E. The recent trend of the centre is imposing judges from one region to other region.

F. The Centre enjoying the power to recruit the I.A.S., I.P.S. Officers and sending Officers of one region to serve in other region.

G. Regional languages are not encouraged in the Parliament.

H. Regional Political parties and their reasonable demands are considered by the centre as antisocial and undemocratic and at times antinational.

I. Curbing the regional spirits in the name of national integration.

J. Certain provisions of the constitution are permitting the centre to dismiss the state Ministry or dissolve the state assembly and imposing the Governors Rule, e.g., Article 256, 257, 354, 355, 356 with the help of these provisions in our constitution the centre had repeatedly dismissed the state ministry in almost all the states dissolved the state assemblies and imposed President rule.

K. Nowhere in the constitution states are provided with the right for secession which is a guaranteed right for a state in any federal setup, as evidenced by Federal Constitution of certain countries.

L. Nowhere in the constitution provision is made for the states to make state constitutions

to fulfil the aspiration of the regional masses, as provided in federal constitutions.

M. Huge income under the head taxation and other revenue collection are allocated in the union list in the constitution. State Government Income is meagre and inadequate and is under a perpetual dependence at the hands on the centre.

N. Even regarding the rights enumerated in this state list, the centre had repeatedly encroached upon the state list.

O. The residuary powers in a federal set up will be enjoyed by the states ; but in Indian Constitution it is quite contrary.

P. The powers enumerated in the concurrent list are mostly enjoyed by the centre and the state powers in the concurrent list are meagre. If any conflict of rights arises the centre can prevail over the state.

Q. On April 30, 1947 the constituent assembly at its sitting set up two committees, one to report on the main principles of the union constitution and the other on the principles of Model Provincial constitution. Of the 26 members of the model provincial constitution committee, only seven sent their replies. Sri B. N. Rao, the eminent Jurist, had submitted a model provincial constitution to the constituent assembly. Sri B. N. Rao had suggested to elect Governor to act as head of the provincial executive. As B. N. Rao had not mingled with regional masses and as he had failed to study and Judge the Linguistic spirit of the Regional masses, he had suggested the official language for provincial legislature as Hindi or English and if the speaker permits any other language may be used. Section 19 of Chapter II of his Model provincial constitution runs as follows :

"In the provincial legislature business shall be transacted in Hindusthani or English provided the Chairman or the Speaker as the case may be may permit any member who cannot adequately express himself in either language to address the chamber in the mother tongue".

Fortunately this suggestion of Sri B. N. Rao was not approved by the constituent assembly. This is a clear evidence that the framers of the Indian constitution have no adequate knowledge of the feelings of various regions of India.

In the original Cripp's plan of 1942, it was visualised that the possibility of a provision to enable a province to opt in or opt out of the federal Union of India. This was ignored unfortunately.

Almost all the states are struggling for autonomous status or some status equal to an autonomous body :

(a) The struggle waged by Kashmir people from 1947 up today is struggle for autonomous status with a right to Secessation from the clutches of the centre.

(b) The Punjab demand is also a demand for autonomous status for Sikh state of course one group of people in Punjab demands continuously for Punjabi suba or Khalisthan. But a powerful section in Punjab is ready for a compromise if centre agrees for autonomy of Punjab.

Under these circumstances the centre should fairly concede

(a) To introduce a new constitution for this country.

(b) To divide the whole country into five federal units, namely Southern States, Northern States, Eastern States, Western States and Central States.

(c) The centre should enjoy only the powers viz., foreign policy, communication and transport, defence, currency.

(d) There should be a council called as interstate council equally represented by the states at the centre. This interstate council should be sufficiently empowered with a secretariat.

(e) All states should contribute to meet the expenses for defence and other expenses to run the machinery at the centre.

(f) Each Linguistic state shall function with a parliament composed by the elected members from the state and a Governor.

(g) All the powers except enumerated above for centre should be vested with the states.

(h) The residuary powers should be vested with the states.

(i) The federal unit is composed and represented by the Chief Ministers.

(j) The regional languages shall be used for all official purposes within the regions and for the purposes of transactions of Correspondence English may be permitted for all Central Government purposes and interstate purposes. No languages can be imposed on any region.

(k) For all election purposes either for the centre or state, elections should be conducted not to elect a person but to evaluate the representation for a party. Party system of administration should be adhered and voting pattern for electing individual should be given up.

I am placing these suggestions before you for the purpose of fulfilling the real aspirations of the people living in various regions. Imposition of terms and dictations by the centre on states was a grave concern for the leaders of the Regional parties. Accumulation of powers at the centre is a gross encroachment on the valuable rights of the states. The political problems, sparked at Tamilnadu, Andhra Pradesh, Assam, Punjab, Kashmir and other states are really region-oriened grievances and correctly voiced their objections against

centres imposition on their states. The recent compromised formula worked out by the present Prime Minister are not enduring solutions. But a temporary adjustment, which can erupt at any time.

Therefore this is high time for the centre to take necessary steps for the formation of a new constituent assembly to evolve a three tier set-up a full fledged independent state based on language, a group of states as a Federation in the above said five regions, and a confederation formation at the centre.

This is my view and the view of the political party Namadu Kazakam.

Though my view is for a new constitution as detailed above, as you have furnished me a questionnaire I am formally answering these questions just to ventilate our feelings against the provisions of the present constitution and my answering for those questions are annexed herewith.

REPLIES TO QUESTIONNAIRES

PART I

1.1 Our constitution is not strictly a federal constitution of course, it looks as if it is a federal constitution but strictly this is more a unitary *constitution* than federal. The framers of the Constitution had borrowed the provisions of the Government of India Act, 1935 and the Government of India Act 1935 was framed by the then *rulers* of India Continent. Their task was to govern the colonial territory keeping in mind that the British Empire is supreme for all purposes. The Govt. of India Act, 1935 gave only restricted powers to the then *legislative Councils* framed under the Act. I regret to say the provincial legislature of the Government of India Act, 1935 was only acting as an Advisory Board to the Governor or to the British empire through Governor, however, the Act has enumerated certain powers to the Provincial Legislature.

1. The Legislative powers guaranteed under the Indian Constitution for each State provides the States Legislative body to form a State Government, a Cabinet with collective responsibility and legislatures for each constituency. This legislative function of the State is repeatedly disturbed by the high power given to the Centre under Article 365 of our constitution. Under Article 365 of the Constitution the Centre with out any reason disturb the State Legislatures, dismiss the State Governments, dissolve the State Assemblies and impose the rule of *Governor*. Almost all states have experienced themselves this non federal act and undemocratic imposition of Governor's Rule. When Compared with the Government of India Act 1935 the provincial legislature, enjoy only the transistory power. Though the provincial legislature is given some power the imposition of Governor rule or President rule is more like a Democles sword hanging over and above the provincial legislative body.

2. The Governor is not an elected person under the Constitution but only appointed by the Centre. The fair legislations passed by the State either unanimously or by division are sent for the assent of Governor or President. Most of the valuable legislations sent for the assent of Governor or president are lodged in continuously for years together or they are returned want only with some *quearies* to the State Legislature. They are kept in their offices without granting assent. In this context, I would quote, as an example one legislation passed by the then Congress Government from personal experience. When the Land Ceiling Act, 1960 was introduced in the then State Legislature and when it came into force on 6-4-1960 enormous time was given to the landlords to create binami documents just for the purpose of keeping their Vast extent of agricultural lands away from the ambit of the Tamil Nadu Agricultural Land Ceiling Act, 1960. Nearly 20 years have passed since the legislation of the Land Ceiling Act came into existence, certain land-lords were holding Vast extent of lands under their possession and they have cleverly escaped from the ambit of the Land Ceiling Act. For the purpose of redistribution of land to the landless poor rectifying the Defects of the above Act I am the Revenue Minister placed legislation before the State Legislature invalidating the bogus Binami transactions prepared earlier. The Legislation was passed in the State Legislature and it was sent for the assent of the President of India. For several months the legislation papers were lodged in the President's office and returned to State Legislature without granting assent to the Hill. I am quoting this incident to this Commission to show that State Executive power is not free and the State Legislature is greatly handicapped and causes hardship in the name of 'President's Assent'.

3. Thirdly with regard to judiciary many of the foreign countries have followed peculiar system. They are having a Federal Court at the Centre which deals with the inter-State relationship. All Civil and Criminal cases are tried by the judiciary at the State Level itself. Each State is having a Supreme Court at the head of the State judiciary and passes final verdict on the disputes with regard to revenue civil and criminal sphere. The judges are chosen from the respective States and verdict is passed in the regional languages. This feature is essential for a Federal Government. But so far as our Constitution is concerned the Court at the Centre is the highest court for all Criminal, civil and Revenue disputes and also have power for enforcing the fundamental right as gauranteed under the Constitution. The High Courts in the State level are not the supreme judicial bodies but they are under the control of the Supreme Court at the Centre. Even this judiciary is not independent in practice. To control the judiciary the Government at Centre is transferring the judges from one region to other region purposely to keep judiciary within the control of the government at the Centre. I have enumerated these things to illustrate that our present Constitution is not Federal with regard to Legislative powers, Executive powers and Judiciary. The finance controls is purely with the Centre. Heavy taxation revenues are passing to the Centre and the State is always at the mercy of the Centre even to meet immediate relief work.

1.2 I wholeheartedly agree with the views suggested by Dr. P. V. Rajammannar's Commission whose aim is to bring autonomous status for the States. I agree with Dr. Rajammannar's report with regard to Article 251, 256, 257, 348, 349, 355, 356, 357 and 365. The Centre had repeatedly misused the powers under Article 365. The very first instance is the dismissal of Thiru Namboodhiripad's Government in Kerala State. From the dismissal of Namboodhiripad's Government in the State of Kerala down to the dismissal of Mr. Rama Rao's Government in the State of Andhra Pradesh. The dismissal of the elected Governments by the Centre was undemocratic, partial and prejudicial to the norms of the political institutions. The elected governments by the dismissed by the centre is more like the imposition of something against the verdict of the people. Therefore, I am of the view that Article 365 of the Constitution should completely be deleted as it paves way to dismiss the popular Governments of the States. Please refer my introduction.

1.3 India is a multi-linguistic State with different culture and traditions. Due to the advent of British imperialism India and other neighbouring countries were governed by one foreign Government. The purpose of independence is to achieve freedom for the country as a whole and freedom for the liberal use of language in their respective State, and also for the freedom to safeguard the traditional values of the people belonging to various regions. A demand is made to centralise everything, disturbs the spontaneous traditional culture and the growth of the regional languages. In the annals of the 35 years of the running of Indian Constitutional machinery almost all States raised slogans to protect the lofty ideals of the respective regions in one way or other. The slogan raised by Tamil Nadu for autonomous State is one among these demands. As everything is Centralised at the Centre the Centre is unable to meet the demands of the common man. The alternative is suggested in my introduction.

1.4 The U.S.A. permits the State Legislature to function as a separate entity within their jurisdiction merely because certain independent powers are allotted to the State Legislatures. The State legislature has never demanded for any separation. The founder of the U.S.S.R. Comrade Lenin had quoted in one of his speeches that the State should have independent economic powers within their ambit. Merely because divorce is legalised the spouse is not in the habit of urging for a divorce. The States can have powers for separation if the security of the State is in danger in the hands of the Centre. In U.S.S.R. the States are having ample power for separation and to function as an independent State. This power is a legally guaranteed power for a State in a well cultured country.

1.5 (a) I am not fully agreeing with the Constitution is basically flexible, to meet the challenge of changing times. For instance, Tamil Nadu is opposing the imposition of Hindi right from the date of the passing of the provision in the constituent Assembly. So far the Constitution is not amended but some assurances were given by the Prime Ministers repeatedly. Inspite of that huge money is spent by the Centre for Hindi only and all other national languages are not enjoying adequate funds for their growth. Our Constitution is not flexible to present a bill before the Parliament. The amending procedure is causing great hardship, however the demand of Tamils is justifiable. Constitution is amended repeatedly for the ruling party's views and objections. I have elaborately discussed this subject in the introduction under the head.

(b) I am not agreeing with the view that the defects tensions and problems which have arisen in Union-State relationships are not due to any substantial defect in the Scheme and fundamental fabric of the Constitution. The State Government is kept in a position to beg for the least money for the relief work of the States. As Centre is equipped with more financial resources and as Centre is having a command over all States with regard to financial distribution of funds to the States discrimination in the distribution of funds to the States occured repeatedly. Some States under the political pressure with the Centre are able to gain more funds and some other States are not getting their reasonable funds. This discrimination causes tension for the neglected States. Party consideration, political influence and power politics, cause considerable encroachment, discrimination under the distribution of funds by the Centre to the States; the constitution have not regulated proper distribution. The Supreme power guaranteed under the Constitution to the Centre for the distribution of the funds to the State is the main cause for strained relationship with the Centre. Political pressure and dismissal of the popular Government under Article 365 is bad president prevailing even today in the Indian Constitution. Imposition of Judges from one region to other region is curbing and limiting the use of regional languages in judiciary. The selection of highest officers by the Centre and distribution of these officers to various other States also curbs the legal rights to the respective States.

(c) These defects, problems and issues cannot be rectified without a new Constitution. The framers of the Constitution have not forseen the dynamic change nor judged the fair aspiration of the people of various regions. Regional values and organisations are fully ignored and unitary Constitution is framed without taking into account all the linguistic thoughts and traditional values,

(d) (i) Dr. P. V. Rajamannar has suggested some changes in the Constitution only, but I should like to suggest framing a new Constitution itself, as I said in the introduction. The best suited Constitution for our country can be Confederation. The Centre should be allowed to solve the Inter State disputes, transport foreign exchange, Reserve Bank control. Defence, Postal and Revenue, Civil Aviation and major national programme of work like petrolium projects. All other powers should be redistributed to the States and the States should be equipped with all powers inclusive of power for separation. Please refer three tier set up as suggestd in the introduction.

1.6 I agree protection of integrity and independance of this country is of paramount importance.

Already I have suggested the structure of the present Constitution itself is basically in error. Only by bringing a new constitution as I said earlier can maintain the unity and integrity of the country.

1.7 I have elaborately analysed in my introduction.

1.8 Empowering the State under new Constitution for the purpose of better administration and for fulfilling the aspirations of people living in various regions of this country. The people under different regions can be united under the head Federation for instance, Tamil Nadu, Kerala & Andhra Pradesh can be formed as a Southern Federation and the States should be re-organised on the respective languages spoken by the people in a particular territory. Division of people on the basis of languages and uniting them under a Federation can largely help the redistribution of powers from the Centre to the State. The formation of a Federation can help greatly in solving the Centre State disputes and also can help in unity and integrity of the people living within the respective federation and can help largely for the unity and integrity of the country as a whole. For example The Hindi speaking people can be grouped under one Federation. The Northern order including Kashmir can be united another Federation. From Bengal to Orissa can be formed into a Federation. Maharashtra to Gujarath can be formed into another federation. India consists of five federations as given in my introduction and the Centre can be formed as a confederations. Political philosophers are generally appreciating the Federation Structure of political institution in a country where people speaking different languages are diversified in their thoughts, culture and tradition. To achieve this type of Constitution, I have already suggested the entire political machinery should be reshaped and remoulded and a new Constitution should be shaped to fit for a Confederate State.

PART II

2.1 It is unfortunate to comment upon our Constitution. As I have suggested already, as the framers of the Constitution have borrowed from the Government of India Act, 1935, a great mistake has happened in framing the Constitution. In the face of Art. 365 of Constitution the State legislature is not at all an independent body. In the name of internal crises of external disturbances, the State Legislatures are repeatedly disturbed, dismissed and dissolved. Art. 365 of the Constitution is dangerous undemocratic weapon to smash the popular elected State Legislature (For Namboodhiripad was chosen to form a Ministry in Kerala State. The moment, the Ministry was formed, the opposition parties and some other elements were indirectly induced by the Centre itself and caused disturbance against the Ministry. Instead of giving protection to Namboodhiripad's Ministry, the Centre took a drastic step and dismissed the popular government in Kerala). Almost all the States have suffered the dismissal of Government at the hands of the Centre. The Ministry of Dr. Kalaingar Karunanidhi was dismissed in Tamil Nadu. The Ministry of Mrs. Nandhini Sathpadhi was dismissed in Orissa. The Ministry of Farook Abdullah was dismissed in Kashmir and finally the Ministry of Mr. Rama Rao was dismissed in Andhra Pradesh that caused more agitations, demonstrations, Harthal, picketing, mass arrest, violation of 144 orders and finally the Centre yielded for the demands of the people and reinstated Rama Rao in the Office of Chief Ministers, Andhra Pradesh. On Numerous occasions Centre has dismissed various State Ministries, Dissolved their Assemblies and ordered for imposition of Governor's rule.

2.2 I have already suggested that the Centre should enjoy only the powers under the head Defence, Reserve Bank, Monetory control, postal, railway, civil aviation, foreign relationship and disputes, inter river disputes; all other powers should be vested with the State. Framing the Constitution is proper solution for this.

2.3 Answered in introduction.

2.4 Absolutely the parliament is not the competent authority to intervene and pass legislations concerning a State. The state is out and out an autonomous body that it should be freely permitted to pass legislation as it feels and the State legislature alone can be the proper authority for giving protection for people living in a particular place either perpetually or for a time limit. Parliament should not be permitted to encroach upon the legal rights of State.

2.5 I have already suggested the remedies under new Constitution.

PART III

ROLE OF THE GOVERNOR

3.1 The Governor is not an elected person and merely a nominee of the Centre. Under this circumstance no Governor should be permitted to run a parallel Government with the State. We should keep in mind that the Government in any particular state is an elected body. The Chief Minister and the Cabinet Members are directly elected by the people and form a Government. But the Governor under present set up is merely a nominee who acts only as a puppet. There is view that the Governor is to be elected by the people. If Governor is also an elected body it will have way for a conflict between two elected bodies in a particular State.

3.2 The Governor can exercise no right on the State Legislature. He is not competent man to foster the relationship of a State with the Centre. As a Governor is representing as a nominee of the Centre, his function is irreduceable minimum, merely to sign papers in a formal manner. If the Governor exercises any power in conflict with Chief Ministers that will naturally cause crises in the State.

3.3 (a) The Governor is enjoying the highest post in a particular state. He is neither a investigator nor a party man. If he brings in any report against a particular State to the President, he is not competant to act as a Governor. If the Governor

endorses all the views of the Chief Minister, the Governor's post is unwanted one. Either way the Governor's report can serve no useful purpose to solve a problem. In a Democratic set up, the President should give more weight to the decision taken by the Legislature than the report of the nominee, the Governor. Often Governors are not preparing reports; sometime the Centre itself is preparing the report and ask their nominee to sign and on the strength of the report of the Governor the State Governments are dismissed. Therefore, Governor's report to the Present is neither useful nor basically correct. This is the position at present.

3.4 I have already answered this question in more details from my own personal experience as Revenue Minister in the State of Tamil Nadu. This sad legacy in the Tamil Nadu State Assembly is a concrete instance for your kind consideration; if any bill passed by the Assembly infringes any right under the Constitution there are ample powers in the Constitution to take the bill before the judicial body and the judiciary is competent to declare a bill void or invalid against the provisions of the Constitution law when there is a judicial check for a particular bill, the Governor and the President who are in the habit of lodging a bill in connivance with the Centre is a very bad precedent.

3.5 In the quoted above instance from my personal experience the bill was withheld for several years and returned to the State Legislature at a highly belated time. The error committed under the pretext of the President's assent for any bill can be repeated by another President and will become a bad precedent. Withholding a bill by the President or Governor indirectly causes a threat to the autonomous function of the State Legislature. Unnecessary delay in returning the bill paves way to escape from the ambit of legislation and object of the legislation is never achieved due to the delay of the President; whatever may be, when a popular Government passes a bill why should indirctly the President withhold the bill or return the bill without a assent. A new constitutional set up alone is a remedy.

3.6 As I already suggested the Governor is only a nominated head nominated by the Centre. He is not a competent link to strengthen the Centre State relationship. Only the Inter State Council can be the best suited forum for the Centre State relationship. The Governor is often under the control of the Centre. Terms are dictated to the Governor and the Governor is acting according to the direction given by the Centre. The role of the Governor is fully exposed in the dismissal of Rama Rao's Ministry in Andhra Pradesh. When the Governor dismissed Rama Rao and appointed Bhaskara Rao as Chief Minister and as Bhaskara Rao had not proved his strength, question was raised in the Parliament; charges were levelled against the then Prime Minister that the drastic action taken by the Governor of Andhra Pradesh was at the instruction of the Prime Minister herself. But the Governor had acted in connivance with some other Central leader at their instruction. The aspiration is bonafide. An agitation was effectively carried out, continuously for a month or more. The Centre dropped that Governor and appointed some other person as Governor for Andhra Pradesh. It shows that the Centre is having all powers to dictate terms to the Governor. Naturally one will hold the bonafide belief that the action taken by the Governor is at the instruction or instigation of the Centre.

3.7 As the Governor is only a nominee of the Centre none can expect him to work as a Supreme Court Judge.

3.8 Even without the help of the Governor ruling party's strength can be proved or disproved. If the Speaker himself is not impartial then the Governor may be asked to summon the Assembly and ask the Chief Minister to prove his strength whether he has own the confidence of the house.

3.9 The reference quoted from the German Constitution is not suited to our country. I have a scheme in my introduction.

PART IV

ADMINISTRATIVE REFORMS

4.1 This question never arises in the context of my proposals.

4.2 Article 365 should be deleted.

4.3 I fully endorse this view that provisions of Art. 256 are often misused by the Centre to encroach upon the legal rights of the State. This Article confers the power only under the external circumstances, but often the Centre had applied the provisions of this Article as a vindictive measure against State Legislature. Only in consultation with Inter State Council Judges forum and high level consultative body the President can apply his power and not under this article; otherwise the State Legislatures cannot function; these articles are permanent threat for the proper functioning of the State Legislature.

4.4 I have suggested more details in the earlier questions. I am of the opinion that Art. 365 should be completely deleted. If a popular Government fails to discharge its function, it is open for the State to carry any election to form a new Government. Art. 365 is a permanent threat to the democratic rights of the State and therefore this article should be deleted into.

4.5 Whatever may be the circumstances, democratic set up in a particular state cannot be abolished totally for a longer period like 3 years. One year is quite enough and within this period election should be carried out in the State and popular Government should be installed. It is the look out of the popular Government to see the State functions within the ambit of the Constitution. My suggestion is for new constitution.

4.6 The present working arrangement is not satisfactory. It is unfortunate the Election Commission is a tool in the hands of the ruling Party. Ruling Party is fixing the election date suited to

them. For instance, when the former Prime Minister Smt. Indira Gandhi expired the election Commission proposed to carry the election during January, 1985. But as people were mourning the death of Smt. Indira Gandhi and just to exploit the sympathy of people, the election date was advanced from January, 1985 to December 1984. This is a clear instance to show the Election Commission is not an autonomous body. The ruling party as well as the opposition parties should have equal voice in fixing the date for election and a crucial date to be fixed by the Election Commission independantly. Election Commision should not be permitted to fix the election date according to the convenience of the ruling party.

4.7 This criticism is absolutely justifiable. The only remedy would be that these Central Agencies should be under the control and supervision of the Inter State Council. All the State should be equally represented in controlling the day to day work of these agencies.

4.8 I am against the recruitment of All India Services like Indian Administrative Service and Indian Police Service. Police Administration is purely under the State list. Civil Administration also is a State listed subject. For proper working the machinery of the State Government, recruitment could be done bv the State Government itself.

4.9 I am seriously passing this remark. Imposition of Central Police Power in any part of the State without the demand of the State Government should not be done. The centre cannot function as police Machinery in contrast with the State Police machinery in any particular State. If any area is declared as disturbed area by the State it is for the State to see that the disturbed area is kept under control. No other Government except the State Government can exercise police administration in any state. This is my view.

4.10 My view is the State should have independent programme in Radio and Television without the consent or concurrence of the Centre. The Radio and Television in a particular State should fully be under the control of the State. The Centre can also have Broadcasting time in radio and television to broadcast the information with regard to the Centre. 75% of the working time must be under the control of the State and 25% for the Centre. If the State Government seriously opposes any programme the centre should not exhibit such programme. All officers and technicians for Radio and television have to be appointed by State Government in the respective State. The appointee should belong to the respective State.

4.11 Inter-State Council miserably failed in discharging duties in the State reorganisation subject.

4.12 The Inter State Council should be permanent statutory body with legally enforceable powers. The States should equally be represented in Inter State Council. Problems between the States should necessarily be forwarded to the Inter State Council. The Centre State relationship can also be discussed in the Inter State Council.

PART V

FINANCIAL RELATIONS

5.1 For the past 35 years the revenue resources for the Centre were very high and the fiscal position of the State has been very poor. Many States were indebted to the Centre in borrowing for the relief works. As more powers are allotted to the Centre and under the present Constitution Centre is able to collect more money by various provisions of law. The State Governments are badly in need of funds. The Agriculturists indebtedness is a great burden for the state but the state government is handicapped and unable to wipe out the loans because of the Centres instruction compelling the State Government to collect the loans, even though the farmers are continuously suffering from the failure of their crops. Want of funds for the State is the real reason that the Government is unable to work effectively within its ambit. Due to paucity of funds the State Governments proceed a step further and squeez the money from the people in a manner in becoming of a Government. The Government introduced liquor and by introducing or by withdrawing the prohibition Act, Government gains more money in selling liquor. The State Governments should adquately be provided with sufficient resources. The collection of Taxes should be only with the states and centre get contribution from states.

5.2 The State should have a complete fiscal independence regarding resources available in the State to be utilised by the State itself for ever. Out of the total revenue available from the State the Centre should get a proportionate share.

5.3 Every State wants to root out the inequality of income between one citizen and another citizen, remove the caste barriers and wants to establish social justice. The lofty ideals of Thanthai Periyar and Aringar Anna are followed by millions and millions of Tamils who want to establish a casteless society in our State. The so called untouchables viz. the Adhi dravide and people belonging to backward communities have to be assisted by the Government with the educational concessions and employment opportunities. The resource available in the States have to be completely utilised, but under the present circumstances the State is prepetually at the mercy of the Centre as major income like Income Tax and Estate Duty, Insurance, Postal, Railway and other major projects are with the Centre. The States should be empowered to collect all the revenue on respective items and certain percentage of the total income should be given to the Centre for running its machinery. Then only social and economic equality can be achieved.

5.4 This question is of serious concern to the whole of this country. The Government have got a right for taxation but the Centre is having more burden in collecting the taxes as the collection of taxes are not equally distributed amongst the States and the Centre itself is enjoying the power; various threats bubbled in the Indian economy. The perpetual threat of fake notes and black money is not checked by the Centre, in time. MRTP

Commission is not properly functioning. Its ceiling limits are also raised. Under these circumstances the big industrial houses are dictating terms for their benefits. The Government miserably failed in controlling the big industrial houses and Government is unable to check escalation of black money and fake currency notes, consequently for the articles purchased by the common man price is spirelling up and this social evil is not checked by the Government at the Centre. The Centre failed to check all these evils because its area of operation is Vast; its officials are ineffective and the enforceable law are beset with numerous loop holes. Only the State Government can check this economic offences effectively within the limited jurisdiction of their particular State.

5.5 Financial Commission and Planning Commision have miserably failed in surveying the available resources of the State and allocation for planning purposes. The reasons is there is no coordination between State Planning Commission and the Central Planning Commission.

(2) The political influence of some states over the Centre and the Planning Commision in diverting the available funds to borrowed States causes hardship to the poor state. However the Planning Commission and financial Commission are called as autonomous bodies. But they are perpetually under the political influence. The available resources in every state is not surveyed with the help of State Planning Commission and technicians. State Planning Commission as well as the Centre Planning Commission have not so far discussed on this vital subject of this country. Of course, it is well admitted norm that a backward State should always have some concessions in the financial help as well as planning funds, even under the present set up. But our suggestions are given in the introduction.

5.6 We agree there should be a federal fund to uplift the backward State subject to the concurrence of the State. In each and every State certain members are backward both socially and educationally. Under these circumstances, the provisions of Mandal Commission report should strictly be enforced by suitable amendments even in the Present Constitution. Proportional representations of backward communities in employment should be enforced as Constitutional guarantee just as for scheduled Caste and Scheduled Tribe.

5.7 Already answered.

5.8 The taxes enumerated in your question, as I already suggested should be vested with the State, while collecting this taxes reasonable percentage of the proceeds for Centre will be given by States as its due share.

5.9 This never arises because my suggestion already entirely differs that the states should be empowered in collecting these taxes.

5.10 The Finance Commission so far acted as an agent for Union Government surveying the resources available in the State. The Finance Commission ought to have discussed with the State Planning Commission and Finance Administering authorities.

5.12 Question does not arise as I have already made a different proposal.

5.11 Yes. I agree that there is so much of financial indiscipline under the present scheme.

5.15 This question does not arise.

5.16 The question itself supplements my view that States should be more powerful in raising its resources for developmental and non plan expenditure. So far the encroachment by the Centre in the sphere of taxation within the state crippled the State and contributed to perpetual indebtedness towards Centre.

5.17 The most important factor is the encroachment of the Centre in squeezing the taxation finance of the State. Therefore, this further augments my proposal that the taxing power should be only with the States.

5.18 That should be left within the power of the State to borrow as and when they need.

5.22 We do not agree as most of the productive heads of taxes are already usurped by the Centre.

5.23 Leakages in Central taxation as propounded by the question further augment my proposal that the State should be tax collecting authority and not the Centre.

5.24 Does not arise as I recommended that the State should be tax collecting authority and not the Centre.

5.25 Does not arise.

5.26 Centre is further burdened with collection of taxes and hence leakages in taxation. As I already suggested State should empowered to collect taxes. Collection of Taxes is a vital issue.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 As I already suggested, the State itself can implement its projects with due weightage for national importance. State Governments naturally get interested in the success of the programmes.

6.2 There is no need for national Planning Commission, as I have already suggested the State should be empowered to plan.

6.10 The State Plans lose their identity and contents when it is discussed regarding financial assistance from the Centre and therefore the States are not interested in formulating and implementing the economic plan. Therefore I have suggested that States should be fully empowered to implement their plans and there is no need for another Central Assistance in the scheme suggested by me.

6.12 Planning process should be completely decentralised by scrapping the National Planning Commission and empowering the State Planning Commsisio to prepare an effective economic plan keeping in view the availability of resources. Just

for the sake of coordination the State Plans can be discussed at the Inter State Council. Thus the true spirit of cooperation, Federalism can be infused in our planning process.

6.13 The ARCs recommendations only strengthen my proposal that the planning process should be completely within the control of the State.

PART VII

MISCELLANEOUS

Industry

7.1 The industrial development should be completely a State Subject and therefore registration and other matters would automatically fall within the purview of the State.

7.2 There is a misconception that any state-interested project cannot serve the national interest. There is no clash between national interest and State interest. Promoting the interest of the state automatically promoted the interests of the nation. Once this is realised, the problems like national interest, various state interest will be solved.

7.3 Industrial development should be completely a State subject. Therefore licensing, control of capital issue etc. come within the purview of the States.

7.4 Too much encroachment by the Centre in the activities of the State has reduced the State Government to the level of a Municipality. The local needs, aspirations, resources, pattern etc. could be better evaluated by the State than by the Centre and therefore the State should be fully empowered to undertake economic development.

7.5 Such complaints will not arise in, my proposals.

7.6 Such a accustion will not arise if the industrial development becomes 100% a State subject as given by me in my introduction.

PART VIII

TRADE AND COMMERCE

8.1 Trade should be a matter of State subject and certain coordinating measures can be worked out with the help of Inter State Council for the smooth functioning of the inter-State trade.

PART IX

9.1 Agriculture should be a State subject. Centre's intervention will be resented by all states as they do at present.

9.2 The National Commission on Agriculture can be an Advisory Committee helping the States and it will not have any control over State.

9.4 When agriculture and agricultural items are absolutely within the ambit of the State control this question does not arise.

9.5 Research institutions on national level can be of assistance to States.

PART X

10.1 Civil Supply is a State subject and Centre has nothing to do with it. States needs if any can be sorted out through Inter State Council.

PART XI

EDUCATION

11.1 Education is out and out a State Subject and there is no necessity for Central intervention and interference.

11.2 There is no need for University Grants Commission.

11.3 The purposes of consultation and persuasion can be effectively done by the Education Ministers of the State and there is no need for another Central Education Minister.

PART XII

12.1 I have already suggested Inter State Council should be statutorily well equipped body that can settle all disputes between States and disputes between Centre and State and all vital issues. Therefore the American pattern of Advisory Committee is not required.

PRAJA SOCIALIST PARTY

MEMORANDUM

PART I

INTRODUCTION

Federal Government as a popular form of national administration has found a manifest and coveted position in the annals of various constitutions in the world. The manner of inculcating the spirit of federalism in the respective constitutions and the mode of their subsequent implementation though may appear to vary from nation to nation that are wedded in core to this popular form of administration, the stature, prosperity and welfare achieved by these nations inevitably testify to the fact that the spirit of federalism envisaged in their respective constitutions have not merely remained therein as a more piece of monument testifying to the dead political asperations of the people but have potentially coursed through the vains of the nation and fostered a happy and healthy people. Switzerland and United States of America are but two randum examples of this enviable achievement.

Such encouraging political achievements and realities do often spin constitutionalists and other eminent persons into wondering as also probing into the fabric of such constitution to see whether there exists any peculiar or secret manner of embodiment of federal principles in these constitutions so as to lead to the success of their people in practically all spheres OR whether there is any

extraneous influence or circumstance that kindles the spirit of federalism in these constitutions to an ultimate reality. More often than not the manner or quantum in the embodiment of federal principles in these constitutions do not vary but their ultimate effect and achievements do vary which goes to show that some extraneous circumstance decide the ultimate efficiency of the federal principles in a constitution. This extraneous circumstance is nothing but the yawning realisation that a constitution is for the people and a people should never be sacrificed to sustain a constitution.

Reclining against this backdrop of introspection into these various federalisms in action, an insight into the constitution of India would provide much food for thought. Indian constitution it can be said without any reservation is potentially federal in structure but unfortunately works out to be unitary in effect. Our constitution makers have indeed lived up to their declaration to the extent of providing our constitution a "Federal frame work with a strong Centre" but unfortunately the promise of maintaining a firm consistency in the framing of the constitution to that effect has not been followed up in as much as the Centre has been made too strong and the State reduced to mere shadows. The spirit of federalism imbibed in the Indian constitution has tragically enough been confined to the pages of the constitution to be merely spoken about much, reducing it to a mere abstract theory when in contrast the federalism in the constitutions of countries like Switzerland and America have evolved itself to a functional entity wherein the national and regional governments are "Co-ordinate and absolutely independed".

India is a large and hetrogenous because it is a nation holding together people of different tastes and traditions. In short it is a union of state wherein every state has its own individualities and peculiarities calling for a type of administration which can effectively aid the progress of these states as a separate entity so as to enrichen the life of the people therein. *The growth of India as a nation is the growth of these states individually and jointly.* It is an exercise in futility and a vain expectation that a strong union government can effectively achieve the individual development and progress of each state in India because considering the vast size of the Indian territory and its heterogenity all attempts by the union government to involve itself in the affairs of each state would not go beyond a periscopic appreciation and approach and consequent limited developments of the states individually. The fact that the majority of the Indian masses are still wedded to poverty testifies to the preceding administrative propensity.

The chapter on Centre State relations as envisaged in the constitution of India and as held today invites the inevitable and invariable conclusion that although there are literally ample doses of state autonomy therein, the same remains a silent spectator to the degeneration of the states rendering the preamble to our constitution a remote dream. The question is but unavoidable as to what then is the obstacle or impediment to the individual development and achievement of our units state. The answer is that the exercise of federal rights of the state are subject to too much of unhealthy and unwarranted surveillance and restraints by the Centre. This is because the concept of a "Strong Centre" has been unwaryingly over emphasised in the constitution to the extent of making it a despotic instrument. As the unity and integrity of India as a nation was looming large in the minds of the authors of Indian constitution, the over zealous attempt to secure them led the drafts-men of our constitution to unknowingly cripple the healthy federal principles therein by subjecting it at every turn to union scrutiny and deliberation. This manifest situation can be treated akin to an example where an individual after having gifted his horse to another still holds the reins in his own hands. The popular or detrimental dimensions of such a propensity does not need much effort for visualisation. Modestly viewing it, neither does the receipient of the horse derive any benefit from being its ostensive rider as he cannot direct it to destinations of his choice nor can the gifter of the horse holding the reins acquire any advantage as the intension of the gift, being the welfare and convenience of the receiver, is rendered infructous. Inspite of such a deadlock if the horse is spurred on the probable results are that both the rider as well as the person holding the reins will hit the ground with the horse straying away. The states under the Union of India have been gifted autonomy under such an arrangement the result being that the gift is yet to achieve its intention viz. the individual development and prosperity of the states.

An eminent revamping of the Centre State relations is the crying need of the day and unless there is a material and meaningful response to this need, the cry of the people will remain a cry in the wilderness.

There has been a lot of deliberation over the years in the regard. A good lot of constitutionalists as well as eminent study groups have examined this issue in detail. Amidst other suggestion one remedy which has received vide acclamation is the programme of effective decentralisation. Retreating through the preceding observations made herein it appears to be more than warranted that a meaningful decentralisation is the only via media through which the federal principles embodied in our constitution can be clothed with flush and blood enabling it to work into the life of each state and place it on the pedestal of self sufficiency and prosperity.

Decentralisation or the devolution of powers to the state can be achieved within the existing favour frame work of our constitution without bringing in any radical additions. Instead amendment of the federal provisions in a manner which would weed out the bottle necks caused by unwanted involvement, restriction and extortion by the Centre would be the appropriate and positive approach. This is a suggestion advocating more or less a follow up of the lines drawn up in this regard by the Raja Mannar Committee appointed by the Tamil Nadu Government. Of the various articles sought to be revised by the committee only Articles 251, 256 257, 355, 356, 357 and 365 need be

amended or deleted. Because the vehimence of the suggestion advanced in favouring states with palpable autonomy does not relish the idea of weakening the Centre to such an extent that owing to unbridled power the states may eventually disintegrate into separate entities in all respects. The collective status of these states as the Union of India should not suffer at any rate. To be precise the Union government should be equipped with only such powers which would enable it to restrain the states from seceding or proving a threat to any of its neighbouring states or implementing programmes ultra vires constitution. In short only such latitude should be given to the administrative and legislative tentacles of union as would suffice to protect the country or any part of it from external aggression and also prevent the states from causing internal disturbance or seceding to a total separation. In this regard vital subjects such as defence, communication, transport, citizenship, currency, extradition and the like which if left to state could jeopardice the entire Union of India in any manner should be retained with the Centre with absolute prerogative to act upon it. Further details of decentralisation would follow in the subsequent parts herein relating to modification in the different federal relations.

The Praja Socialist Party presents the above modest study of the Centre State relations with suggestions for effective decentralisation before the esteemed Sarkaria Commission for its favourable and adequate consideration. The party would venture a step further to add that an effective, uniform and practical socialism can be achieved only if there is a move to decentralise our constitution.

PART II

LEGISLATIVE RELATIONS

Chapter I under Part XI of the Indian Constitution envisaging Articles 245 to Article 255 deals wih legislative relations between the Union and States. The Chapter on legislative relations between the Union and the state under a federal constitution demarcates the boundaries of autonomy fixed for the states and the Union with regard to the field of legislation. The constitution of India makes a two fold distribution of legislative powers between the Union and the states dividing legislation into two aspects of territory and subject matter. Although in principle there appears an ostensible division of legislative powers in the matter of territories and other subjects it is indeed a sad realisation that the legislative autonomy attributed to the states do not ensure to free implementation as the same is restricted by unbriddled union interference.

Subjectwise the distribution of legislative powers between the Union and the states are exhaustively enumerated under three lists referred to as the seventh schedule in the constitution. They are the Union list, the State list and the concurrent list. An impartial observation of the items that have gone into the respective lists and the latitude given to the states to freely legislate on the subjects allotted to them cannot but escape the conclusion that a truely federal state has no place in the constitution of India and that a federation has no accommodation in the political denstiny of our people.

The Union list over and above including such items as are required to protect the freedom, unity, integrity and security of India as a nation also draws in subjects which in a sincere federal arrangement ought to be relegated to the states. In this regard what are the items that should be reserved in the Union list is an issue which can be decided satisfactorily only after a detailed deliberation. Further item 97 of the Union list needs an amendment in as much as residual matters pertaining to the major items in the Union lists alone should be within the perview of Union legislation. The Union list as it stands now has practically "bottled" our federation.

Coming down to list No. 2 being the State list, not only the items contained therein constitute the left overs of a Union legislative feast but the state finds it practically impossible to enjoy the legislative left overs as the constitution has posted too many watch dogs under the control of the Centre, the result being that the states never achieve federalism. The legislative autonomy of states in respect of the items enumerated in the State list are subject to the following conditions or restrictions of the Parliament :—

(i) Article 200 .	States to reserve bill for assent of President.
(ii) Article 201 .	Empowering President with discretion to accept or reject legislative bills presented by States for ratification.
(iii) Article 251 read with Article 250	State legislation to be subervien to legislative power of Parliament under Article 250.
(iv) Article 356(b)	Declaration of emergency in States.
(v) Article 31(a)	Law regarding acquisition of estates, amalgamation of Corporations, modifying right of Corporate officers etc. made by State subject to President's assent.
31(c)	Laws made by State to enforce directive principles of state policy subject to review by courts unless ratified by President.
(vi) Article 282(2)	State laws imposing tax on water and electricity subject to ratification of the President.
(vii) Article 304(b)	Power of state to impose restrictions on freedom of trade, commerce and intercourse subject to sanction of President for introducing such a bill.

Although Articles 249 and 252 speak of the autonomy of the Central legislature in the sphere of state legislation, the Articles do not go against the principles of federalism as the authority of the Union legislature to legislate under these Articles are subject to the control of state. In short it is a deligated legislation from state to Centre.

Crowning or strengthening the above provisions whereby the Centre could have the final say in state legislation, Article 368 empowers the Union Parliament to amend the federal constitution wherein though the proposed amendment has to be ratified by the legislature of not less than one half of the states, there is no provision therein making it imperative to consult the States or get their concurrent in advance. The absence of such a provision makes Article 368 a dictatorial provision waylaying the federal rights of the constituent states.

The State list in spite of the fact contains nothing but the left overs of the Union legislative feast, has been steadily impoverished over the last 34 years by snatching away from it such vital items as forest, education, administration of justice etc. The 42 amendment which robbed the State list of its material contents also signifies or testifies to the way laying propensities of Article 368 described above.

In viewing the contents of the concurrent list, the most apt and justifiable description of the same would be to state that the concurrent list is nothing but a satellite of the Union list in as much as it not only contains potential subjects but the superiority of Union laws over state laws with regard to the items therein makes the entire lists a supplementary Union lists.

Considering the following facts :—

(i) Union lists contain items to which states are entitled.

(ii) The State list subject to a plethora of Central interference or ratification.

(iii) The concurrent list in effect being a supplementary Union list.

(iv) Absolute power to legislate on residuary items retained by the Centre.

it cannot be but stated that the distribution of legislative powers under our constitution loses its efficacy because in the ultimate operation of all the lists the Parliament retains undue and unhealthy supremacy. This state of affairs have strictly speaking driven state autonomy into a "Coma" for although the state exists as an entity its political, social and economic destiny, lies paralysed. To be precise as is the case elsewhere also the present distribution of legislative powers enforced a situation wherein states who can successfully "Woo" or "Court" the Centre alone will get a piece of the autonomical "Cake".

The Praja Socialist Party puts forward certain broad outlines for remedying the inconsistancies and incongruities that have practically made the legislative relations between the Union and the States infructous and abstract. It would not be wrong to say that the Indian economy is by and large a reflection of its agricultural and industrial potentialities. These items equally constitute the base of the growth of states individually. Industry, agriculture, trade and commerce constitute a vital field to the economic and political growth of the state. It is suffocating to note that these broad sources of economic developments with their allied activities and fields are confined to union legislation. In this view the demand is popular that in order to ensure a healthy growth of our states all topics under and allied to the fields of agriculture, industry, trade and commerce must invariably be transferred to the state list and simultaneously withdraw or amend those articles in the constitution which have hither to been crippling state legislative autonomy by subjecting it at every turn to Union scrutiny. The occasion calls for a review that will take note of the vastly increased needs of the states to assume responsibility to implement developmental programmes and social welfare measures and thereby make provision for suitable rearrangement of the constitution restoring to the states sufficient autonomy to enable its unimpeded growth. If the quantom of legislative autonomy to which states are rationally entitled under a federal set up does not accrue to them, then the existing glaring regional imbalances in the fields of agriculture, industry, trade and commerce would continue to effect their uniform growth and pave the way to trenchant distortions in their economy.

It is suggested that necessary reshaping be done of the powers granted to the Parliament in the matter of amending the constitution whereby amendment seeking to restrict, curtail or deprive the State of its legislative powers, be introduced in Parliament only after the prior consultation with and concurrence of the states. It would be also pertinent to suggest here that provision has to be embodied in our constitution which would prescribe a definite time schedule within which the President is bound to exercise his power under Article 200. With regard to Article 201 the same may be amended as to take away the unbridled freedom of the President to dissent with legislation introduced by States unless they are manifestly ultra vires the constitution.

PART III

GOVERNOR

The Governor as contemplated under the provisions of the Indian constitution is a representative of the Union, acting as the executive head of the State. The Governor as projected by the constitution appears to be more or less an arbitrator. The executive, financial, legislative and judicial superintendence of the Governor highlighted in our constitutional set up makes the state autonomy appear to be a puppet dancing to the tunes of the Governor.

In the legislative field the Governor has his absolute discretion to reserve any bill for the assent of the President under Article 200. This goes basically against federal spirit because each and every bill formulated by a state reflects certain exigencies in the life of the state and its development. The urgency of the bill is yet another factor. Considering these aspects if the Governor uses his right to reserve bills for the assent of the President indiscriminately, then a state's proposed lines of development will stagnate leading to degeneration instead of progress. The ordinance making power of the Governor is also a potential weapon which if left to stray can cause a lot of havoc to the healthy growth of the state. Finances which form the blood of state autonomy is also subject to control by the Governor in as much as money bills which seek to augment the revenue resources of the state in order to meet its developmental programmes are required to be recommended by the Governor. In short the role of the Governor as envisaged by the Indian constitution is that of a state superintendent appointed by the Union executive.

But in spite of the office of the Governor being picturised as arbitrary by our constitution, the experiences of states over the last thirty four years goes to show that the Governor is nothing but a static via media between the Union and the State whereby generally he neither offends the state nor favours the Centre. Of course the séries of reports made by Governors different state to the President under the Article 356 was not justified on all occasions which further points to the fact that Governors can under the existing constitutional provisions retard the prospects of the state. As the subject of Centre State relations is much under fire now owing to the seething discontent in the states and as the Governor plays a pivotal role in the matter of Centre State relations, in view of the suggested decentralisation of the Union, a thorough rearrangement of the Governors administrative province is imminently required. In the event of the states being conferred with substantial autonomy the Governor has to be empowered with more powers to act as a safety valve. In a decentralised atmosphere a Governor should act as a sentinal of national integrity, unity and security. Accordingly the Governors should hereafter be equipped with only such powers which would enable them to help the Centre maintain the unity, integrity and security of the nation. A Governor should be a periscope of the centre at the state. Without unnecessarily impeding the policy making by states the Governor ought to keep a watch on the states exercising their autonomy to ensure that nothing therein is likely to go against the provisions of the constitution or endanger the unity, integrity or security of the nation. Even in such circumstances the report of the Governor must be subjected to necessary scrutiny by Union State Councils before the President or the Parliament can act upon it.

Keeping in view the prospects of revising the potentialities of the Governor's office in the wake of effective decentralisation, the Praja Socialist Party ventures to make the following suggestions.

In the matter of appointing or electing a Governor the existing provisions shuold be amended. Hereafter the names of persons proposed to be appointed as Governors must be informed by the President to the Prime Minister who in turn shall place them before the Lok Sabha and the Rajya Sabha. Only such candidate who is elected by both the Houses should be appointed as Governor by the President. Only those candidates who have been selected by the majority of the members of the Houses present and voting shall be declared elected.

Further the existing procedure of consulting the respective Chief Minister before appointing a Governor should be done away with because a Governor who is appointed with the aid or concurrence of a Chief Minister will perpetually be under a feeling of obligation to the concerned ministry which would consequently act as a impediment in the effective and impartial discharge of the duties of the Governor as a representative of the Union executive. Under a decentralised set up if the Governor acts hand in glove with the respective states who are riding high on the crest of autonomy then the constitutional safeguards intended to check the possible dangerous progress or propensities of state will be rendered nugatory.

The following suggestions may also be granted sufficient consideration :—

(i) The Governor should be under and obligation to summon the leader of the largest party or leaders of parties which fought the election as a coalition to form a government. The largest party or coalition should be determined only in accordance with the election results.

(ii) The question whether a government retains or has lost confidence of the legislature should be tested on the floor of the house and not in the discretionary assessment of the Governor.

(iii) There should be a provision that if at least one third of the members of the legislature ask for a session, then the Governor should have the power to summon the legislature.

The protection of minority and backward classes constitute a major responsibility entrusted to the Union and States. In this regard it may be suggested that fifty per cent of the selection of candidates for Governorship should be from the Scheduled Castes and Scheduled Tribes. This is all the more necessary because these backward classes even now do not have sufficient representation or say in the matter of protecting the right or upliftment. Sufficient inclusion in Governorship would enable them to see that states makes adequate provisions for their upliftment.

As a conclusive suggestion it is also required that if the Governor continues to have discretionary powers under the prospective decentralisation than it must be made imperative that all discretionary exercise of powers by the Governor should be subject to the review of an Union state council.

PART IV

ADMINISTRATIVE RELATIONS

Administrative relations in a federal division of powers proves the efficacy or utility of the legislative and financial autonomy of a state.

The administrative relations or the state executive autonomy is largely governed by Articles 256 to 263, 356, 365 and 323-A of the Indian Constitution. A casual reading of these provisions would once again evince the very same observation that as is the case elsewhere in the realm of Centre State relations, the State executive is practically a fiction in the sense that much of the State executive authorities are either appointed by the Union executive or the Governor who is the agent of the Union executive in the state. In addition to this there are over all patent checks on state executive latitude by the Parliament under article 256, 257 and 365 of the Constitution.

The reason why the Union executive is saddled with the control of the state executive is that the Union and concurrent list under the legislative relations have attributed so much of legislative field to the centre that in order to maintain and protect the supremacy of these lists the constitution makers had no other choice but subject state executive to frequent surveillance and check by the Union executive. This is the very reason why our Union and States do not have separate agencies for the administration and execution of all their respective laws and programmes.

In view of the suggested decentralisation of the constitution, the executive relation existing now between the Union and the States require the following readjustments.

1. As the Union list is to contain only those items which are to deal with or concern the unity, integrity and security of the nation, Articles 256 and 257 should be so reconstructed so as to restrain the executive control of parliament over state legislators strictly to the extent of subjects which are retained in the Union lists under the prospective decentralisation. Article 356 should be further strengthened to be used as an ultimate resort in case owing to substantial modification of Articles 256 and 257 the states tend to go against the interest of the nation. Merely because the state has failed to comply with any direction issued by the Union executive is no ground for invoking Article 365 and retaining it would make it a potential weapon in the hands of the Union executive so that inspite of being conferred with autonomy otherwise, the states would not venture to implement their developmental programmes under fear that the very state administration could be watered down by the Union. This is once again a propensity that goes at the roots of federalism. Where different political parties stand at the helm of power at the Centre and State, this article can prove a disastrous weapon. Hence Article 365 is to be totally wiped out from the Indian Constitution.

2. Article 356 has undergone certain major amendments vide the 42 and 44th amendments to our constitution. Though under the existing Centre State relation this erosion by the Centre into the State legislative life span is highly derogatory, in view of the proposed effective decentralisation it is believed that the Article as it stands now need not be devitalised. But the operation of Article 356 should not be left to the unilateral opinion of the Governor. There should be provisions to subject the report of the Governor to a detailed and speedy appraisal by a Union State Council such as :—

(i) Council of Governors headed by the President as the Chairman.

(ii) Council of Chief Ministers headed by the Prime Minister as the Chairman.

(iii) Council of Ministers for each portfolio headed by the respective Central Cabinet Minister as the Chairman.

(iv) Councils constituting eminent judges from State and Centre.

Considering the possibility that owing to overnight developments in States inviting action under Article 356 may take time, the Article may be so modified as to permit an immediate interim application of the provision by the President only for a period of one month and that in the meanwhile the mediating council should file its opinion report and any extension of the emergency period must strictly be advocated by such report.

3. Article 355 of the constitution enabling the Union to locate and use its Central Reserve Police and other armed forces in the aid of the civil power in any state is a healthy provision provided the Union is not allowed to use it *suo moto*. Only when a state forms its own opinion that situation within the state warrants the aid of Central forces and accordingly informs the Centre, should the Union act under this Article.

4. Mass media being one of the vital links holding together a bunch of states as a nation should be under the equal purview of both the Union and the State. A fair and reasonable sharing of the means of mass communication media is all the more warranted when states are allotted more autonomy under a programme of effective decentralisation. A total handover of this item to the State list is not advisable as it creates tendencies of sedition which is again a possible threat to the unity, integrity and security of India as a nation.

5. Inter-state Councils at contemplated under Article 263 of the Constitution is an highly useful body which requires absolute implementation at the earliest. When States are conferred with viable autonomy there could be occasions when the developments of a particular state would occasion problems with another State. Under such circumstances unless there is an intermediary to help settle problems mutually states could go at the throat of each other making autonomy a source of internal hostility and destruction. Although the States to a dispute should be bound to adhere to the ultimate directions of such a body, the body should not be vested with too much discretionary power as it would defeat the very purpose of its existance. An amicable settlement of issues and disputes should be the guideline of the inter-state council. The council could very well have its own secretariat but the same should envisage ample representation from the states concerned. The council should be given the prerogative to appoint from the state executives certain feelers to assess independently the issue or problems between states.

6. The power of the Governor under Article 258-A is not advisable in the sense a unilateral exercising of the prerogative herein will go against the executive autonomy of the state. Substantial consultations with and concurrence of the state must be accommodated in this Article.

7. Agencies like Agricultural Price Commission, Central Water Commission, Monopolies and Restrictive Trade Practices Commission, Director General of Technical Development, Food Corporation of India etc. are under the dominant control of the Centre and accordingly it has made palpable inroads into the State's autonomy. Impoverished as

the State list is now, the attempts of the different states to develop their respective potentialities and personalities atleast in the items they have power to legislate is rendered infructuous as the agencies stated earlier act under a law that is alien to the legislative imperative of the state. When a state passes a legislation to implement a developmental programme the particular legislation takes into consideration the peculiar circumstances or problems in the state which the legislation will have to solve or accommodate and giving the Central agencies a blanket executive jurisdiction in such matters tantamounts to paralysing the economic, political and social growth of the state.

PART V

FINANCIAL RELATIONS

As the majority of questions raised by the esteemed commission under this chapter retain a suggestion or spirit of financial centralisation, the Praja Socialist Party in advocating an effective decentralisation finds it immaterial to answer or report on any of those questions.

The financial relationship in a federal set up constitute the most important criterion in assessing the autonomy of unit states. No amount of legislative or administrative license to states would serve any purpose unless and until there is substantial finance to sustain or shelter the two. In short finances in a federal set up constitute the cart wheels of legislative and administrative autonomy of states.

Article 264 to 290 define the financial relation or arrangement between the Union and the States. The gist of the said Articles is that the Union shall be entrusted with the entire revenue which shall then be redivided amidst the different states. At present the financial assistance from the Centre to the states fall into the following categories :—

(1) Devolution of taxes under Articles 268, 269, 270.

(2) Grant-in-aid under Article 275.

(3) Grants and loans under Article 282.

(4) Ad-hoc and discretionary transfers.

The above four medias of revenue devolution is subject to the recommendations of the Finance Commission constituted under Article 280 of the constitution. In short the states at present do not have any direct access to revenue worth mentioning and instead is still under financial spoon feeding by the Centre.

An ideal federal financing is one under which both the Union and the states have independent resources sufficient to implement their respective plans and projects. The system of financial distribution under our constitution fails to correspond to this ideal. Compared to revenue decentralisation of countries like Australia and West Germany, the Indian states are nothing but beggers at the doors of the Centre. The reasons for such a state of affairs is that on one hand the majority of the elastic financial resources are reserved for the union and on the other hand the procedure for devolution of revenue is highly undefined which results in three-fourth of the budgetary resources remaining with the Union while on the expenditure side the share of the Union and the States are more of less equal. To be precise state finances are conspicuously disproportionate to their requirements. Reviewing the working of the mechanisms for devolution and examining the details of resources transferred by the Union to the State during the last 34 years it is to be said that the scheme of devolution envisaged by our constitution has not been encouraging because there are still glaring regional imbalances and inequalities in the matter of economic self sufficiency and development of states. The only achievement of such a scheme of devolution is that it has helped maintain the comparative *status quo* of states as was visible at the advent of our independence.

In view of the need of augmenting state finances the only way out is to effect a substantial separation of fiscal relations of the Union and the states whereby majority of the elastic taxing heads are transferred to the state lists. A complete devolution of revenue resources is not advocated since the Centre must have substantial funds to meet the overall requirements of the nation and in order to meet this the Centre cannot be expected to knock at the doors of the States when occasions arise.

Financial stability of states cannot be ensured by augmenting revenue resources alone. On the other hand states will have to drastically cut down on unnecessary expenditure. When financially sound states and the Centre put an effective check on waste expenditure the savings thereby can go to the promotion of states who are not so fortunate in spite of their independent resources.

The apprehension that giving more financial powers to states will only further tilt the balance in favour of richer states is unfounded and illogical since richer states can be made to subvent to poorer state under some practical principle. For instance if a rich state does not have sufficient energy resources say electricity, instead of making heavy investments within the state to make arrangements for production of electricity simply in order to maintain *status quo,* the concerned state can be directed to purchase electricity from a state which is not very affluent, so that the heavy margin of financial wastage in the richer state can be avoided and a part of the amount transferred justifiably as price of the electricity to the state supplying it.

Under the present set up of financial devolution states are often constrained to borrow loans from the Centre to meet their basic requirements or developmental programmes. States that borrow loans from Centre go into further insolvency owing to the fact that payment of debts constitute a major part of the states own revenue resources. Herein it could be advised that instead of treating such advances from the Centre as loans, they could be treated as grants-in-aid so that existing or prospective developmental programmes of the state need not be subverted to facilitate repayment of

loans. The only restraint to be exercised herein by the Centre is to strictly scrutinize the loan application of the states to see that the amount granted does not go into unimportant expenditure items.

It is a fact that states are not exploiting their own sources of revenue. This is due to the fact that under the existing financial rapport between the Centre and States, the States are demoralised by the realisation that any augmentation of revenue by exploiting their own resources would either result in the Centre confiscating the returns or it could be made a convenient for the Centre to reduce financial aid to the state by suitable amendments to the constitution to either effects by the Centre. To be brief, the moment the Centre realises that states have some potential sources of revenue they would move to transfer the same to union purview under the guise of "public" or "national" interest.

It is a fact that owing to historical as well as geographical reasons, even if there is a substantial transfer of revenue resources to the state list, certain states may not be able to become economically sound. In order to faster economic development of such states it is advisable to create a special federal fund which should be exclusively used for the purpose of aiding economically under developed areas. The Finance and Planning Commission are not adequate in the sense that there distant appreciation of the State's under developed economy would only prove futile. To be more precise if such commissions do not concur with the opinion of a certain state that they are economically under developed, then such states will have no other go save resort to borrowing which again is detrimental considering the poverty of the state.

It is indeed more than a fact that the Centre and the State have been often indulging in unnecessary and uneconomic expenditure. As regards the Centre this would not have manifest reactions but as regards the states such expenditure have a tendency to deplete the already insufficient revenue. In order to check such tendencies it is suggested that national and regional expenditure commissions be constituted and endowed with such drastic powers that the exercise of restraints by the respective commissions would also include right to initiate a no confidence motion against the respective Ministries.

Natural calamities have serious eroding effects into the state economy. Revenue reserves of States could often get grounded owing to expenditure incurred on account of natural calamities. Under such circumstances it is suggested that the Central Government should set-up apart a separate account for meeting expenses on relief measures occasioned by natural calamities in any part of the country. The quantom of aid required should be assessed on a systematic basis and not on ad hoc consideration. In order to facilitate this, the team that is saddled with this responsibility should also include representatives of the State government.

PART VII

MISCELLANEOUS

Industries

The Industries (Development & Regulation) Act 1951 enacted by virtue of entry 52 of the Union list, is a nefarious piece of Union legislation that has not only paralised the industrial potentialities of the various states in India but also amounts to a mockery of the preamble to our constitution.

Almost 95% of the industrial layout in India comes within the purview of the Centre. As entry 52 in the Union list does not contain any authoritative or logical yards stick to ascertain which are the industries that require the control of the Centre in national interest, the Central Government has been committing a dacoity on the states by including almost everything that can be defined as an industry. It would be pertinent to ask as to what is the "National interest" in items like razor blades, gum, match sticks, household electrical appliances, cosmetics, foot wear, steel furniture and like many items, that they have been brought under the Union list. Probably it is the desire of the Centre that the people of India should have one clean shave a day, or that all ladies must augment their beauty by liberal use of cosmetics and that every house in India should have sufficient electrical appliances, steel furniture, cutlery, sewing machines and presssure cookers. Ridiculous and ludicrous as it may appear to term these industries as matters of national interest they have been conveniently included in the Union list with an ulterior intention namely the confiscation and concentration of revenue resources.

As India is predominantly an agricultural country, development of industries form a vital subject in as much as agricultural does not provide much scope in terms of revenue. Agriculture has practically seized to be source of economic development for most states because a bulk of the agricultural produces are consumed in the home market itself. Industries form the base of federal growth and their control by the Centre is not congenial for the independent growth of state. Accordingly it is the call of the times that industries be substantially transferred to the State list enabling states to achieve thereon financial autonomy as well as development. Only those industries that are connected to feel like defence, nuclear research, telecommunication, currency, aviation, navigation etc. should be under the control of Union. Other industries dealing with day to day requirements of the people must be left to the absolute discretion and control of the state.

The subject of industrial licensing must undergo basic and radical changes. States must be given ample powers to enter directly into contracts or treaties with foreign countries for mobilising industrial knowledge, equipment, raw materials without the unnecessary and time consuming procedure of channalising such activities through the centre. In the very same manner export of industrial products also should not be fettered by the Centre.

Locational decisions on Central investments in the public sector is an issue which states must be invariably taken into confidence because over industrialisation of a sector has much effects. Industrialisation is a major source of atmospheric and environmental pollution. Concentrating industries in a sector which is already cramped in the regard will have adverse and deletrious effect on public health and hygiene. In this regard industrial licensing could bring in some strong provisions restricting location of industries in populated areas.

Under the existing tendency of industrial locations quite a few states have been practically neglected in the matter of heavy industries. The State of Kerala can be an apt example of this situation. While the states of Maharashtra, Tamilnadu, West Bengal, Haryana, Andhra Pradesh are practically over cramped with industries, states like Kerala, Karnataka etc. are practically dry in this respect. Employment being one of the burning issues rocking the nation, the same should be included as one of the material guidelines in the matter of industrial location.

To conclude the subject of Industry must be substantially transferred to the states giving the Centre only an over all supervisory role.

Trade and Commerce

Entry 42 of the Union list deals with domestic trade and commerce and entry 41 therein deals with trade commerce with foreign countries (export and import). Restrictions on the movement of essential and scarce items is a very commendable provision included in our constitution. In a decentralised set-up states should not be given a chance to turn a blind eye to the society of essential items in other states. Articles 301, 303(2) and 304 needs no reconsideration in the event of any further decentralisation. But articles 301 and 303(1) are definitely a perennial source of conflict between the union and the state as also between the states. Constituting an authority under article 307 to look into such conflicts and recommending remedial measures would go a long way in easing Union State tension on the subject of trade and commerce. What is to be borne in mind is that the state resource potentialities cannot be exploited to their maximum unless and until there is scope to bring them into the national market. Therefore the authority constituted under Article 307 has not only the duty of strengthening Union-State relations in the subject of domestic trade and commerce but should also be bound to see that the federal fiscal structure is not paralised or rendered infructuous owing to bottlenecks in trade and commerce.

This opportunity is also availed to suggest that trade and commerce with foreign countries constituting the export and import policy of India should also be relaxed palpably in order to help states establish a direct rapport with foreign countries for augmenting their commercial prospects as also meeting the requirements of the local market. The field of export and import being a subject which if missed could impinge on subjects like national integrity or security, the union should be given a power of surveillance or superintendence to see that the commercial and trade relations between the local states and foreign countries does not touch the unity or integrity of the nation as also the foreign policy of India. Other than this the union should not have a tendency to crib at every dealing of states with foreign countries.

Agriculture

Agriculture constitutes probably the most important and expansive subject from point of economic self sufficiency. Inspite of the fact that the union has sincerely deliberated often on this subject since independence, the lot of agriculture continues to be in a miserable plight. This is one of those concrete instances where as earlier pointed out in this report, the Centre can effect only a periscopic administration and development in this field owing to the fact that practically half the territorial expanse of India constitutes agricultural land and allied activities. Inspite deliberations on the issue of revolutionising agriculture in the country, the plight of the common farmer still remains a bitter story. Lack of sufficient fertilizers at approachable prices, non-availability of advanced agricultural implements, insufficient subsidised loans for agriculture, irrigational problems have all together aided in reducing agriculture to a much dreaded activities inspite of the fact that it is required for the basic sustenance of the society. At this rate the situation is not far when agriculture will become part of history and the nation will have to go begging for food. Such an eventuality will have catastrophic effects. Let us not crave for the "touch of Midas". In order to avert the possible dangerous to the field of agriculture, the Praja Socialist Party would suggest that the subject of agriculture excluding forest should be assigned to State list. Forests should remain in the Union List considering the fact that the latest unbridled tendency to deforestation has created a lot of ecological problems including climate. Deforestation affects climate which in turn seriously hampers agricultural programmes.

Education

Education is a factor that decides the competency of Union and States to undertake implementation of federal projects in the right spirit. Education decides or controls the efficacy of administrative set up. Unless those at the helm of power have at least basic knowledge of matters, state autonomy will become a toy in the hands of politicians.

Education in order to receive the right attention should under federal set up be the lookout of the States. Considering the heterogenuity of India a uniform or centralised code of education is neither advisable nor feasible. In order to reserve and protect the educational rights of minorities and backward classes and in order to take education to the remote corners of the country, the subject should be independently handled by the various states. Both central as well as state involvement in education will burden the average Indian student with so much of controversy and headache that education will fail to achieve its universal target namely the moral and intellectual development of the society.

Education in the present day context has to be awakened from its traditional sleep and made more pragmatic and value oriented. This can be achieved only when the states have an independent control of the matter.

Panchayats

In a federal administration it is the lowest unit of self administration that can effectively look into and reddress the requirements of the people. India even today is a land of villages and the development of these villages and their upliftment from the historical shackles constitute the first line of concerted state activity under an autonomous development. A few sprawling cities in India exhibiting the technical and structural potentialities and advancements should not act as a cover to the fact that the visible development of India over the last 34 years have not even thrown their light over the numerous and remote villages in India.

The only administrative agency that can effectively bring to the villages and translate into effect the messages of the material development of India, is the village panchayat. Most unfortunately panchayats as a unit of local self administration remains a neglected entity. In view of the "Ram Rajya" propounded by the late father of the nation Mahatma Gandhi, panchayats are practically nowhere today.

Panchayats are to be revitalised immediately so as to effect transit of developmental aspects to the villages. In this regard provisions have to be made in the concerned legislations whereby the panchayats get substantial funds for implementing their programmes aimed towards the economic, social and cultural development of our brothers and sisters in the villages. Panchayats should have a steady and mandatory source of financial support from the state governments over and above the finance mobilised by the panchayats by way of panchayat taxes.

Backward Classes

Although the Constitution of India provides for extraordinary aid to the backward classes in order to help them come up it is rather not encouraging to note that these provisions supported by their subsequent legislations have not achieved much in this direction. Although we can see citizens from the backward classes holding good offices now, it represents only a negligible ratio to their entire lot which still live in *cognito*.

In order to keep up the spirit and trend of constitutional support for the upliftment of the backward classes it is highly imperative that the period of reservation of seats for the backward classes in the matter of appointments should be extended at least for another twenty five years.

Elections

Under the existing provisions of the People's Representation Act, candidates who stand for the election often resort to unhealthy practices for ensuring their victory in the election. Voters are often influenced by candidates by various acts of favouritism. Under such a tendency the administration of a state or centre will never get the cream of intellectuals or eminent persons to formulate the administrative policy of a state or centre. Instead any person who has substantial wealth at the hands can purchase his way to the helm of power. Herein in order to avoid such practices it is suggested that the People's Representation Act be so modified as to make provisions whereby the concerned government shall make the arrangement for propaganda or canvassing of candidates as also restrict election expenses of candidates so that the electorate is not purchased. Candidates may be issued with identity cards by the government in this regard. Unless foolproof provisions are made in the People's Representation Act to effectively check candidates from unduly influencing voters, the country will never see a good administration.

Yet again provisions may also be made in the People's Representation Act whereby an elected candidate can be recalled by the state or constituency that has elected them to power. Provisions must be made to effect a refrendum whereby candidates can be recalled. This is a vital provision to be embodied in the act so as to save the fate of the people from the clutches of ruthless and unscrupulous politicians who having been voted to power becomes both a headache to the administration as also to the people who voted him to power.

In concluding this report on the subject matter of Centre-State Relations, the Praja Socialist Party, once again seeks to remind that THE PROSPERITY OF INDIA AS A NATION IS THE PROSPERITY OF HER STATES, and therefore a decentralisation encouraging the independent growth and development of states is the call of the hour.

REPUBLICAN PARTY OF INDIA (KAMBLE)
REPLIES

PART I

INTRODUCTION

1.1 Yes. Can be called Federal. And is Federal. In the strict sense as well.

1.2 No.

Tamil Nadu Dravidians and others like them, have a legitimate grievance.The legitimate grievances would require appropriate legitimate remedies. But certainly not the ones suggested by Rajamannar Committee.

1.3 Heterogenuity can not be removed by territorial remedies like decentralisation. Remedy lies in annihilating heterogenuity and making India homogeneous.

In my view, the optimum Constitutional provision should be to enable India to be a 'self governing community'. The slogan namely 'Unity in diversity' is a cloak to keep India heterogenous perpetually. That must be given up once for all.

1.4 Apart from such question, we have to grapple realistically as to what kind of form and system of government will subserve India to make truly a nation: and still more important, whether every Indian is truely loyal to Constitution in every day life.

1.5 The eminent persons mentioned in the question hold their respective 'Sociological' views on Indian polity and its functioning. The views experssed in (a) and (b) nullify each other. The remedy suggested in (c) renders itself almost nugatory.

The Commission will have to locate the power which is capable of and responsible for working these relationships 'over the years' not in conformity with the true spirit and intent of the Constitution. I have given my suggestions in a consolidated form at the end of these replies to all questions.

1.6 Yes.

The provisions in the Constitution are there for everybody to see.

1.7 The Constitution is meant to provide Constitutional governments ALWAYS at the Union as well as in the States. It is most note-worthy that there is no provision of a 'break-down-clause' at the level of the Union; whereas there is such provision as the level of the States. Constitution contemplates perpetual Constitutional Government at the Union.

The provisions of the Constitution mentioned in the question are there, because the Constitution, should not be found wanting in any eventuality. These provisions are of exceptional nature; not supposed in the ordinary course, to come in operation. To consider the reasonableness or otherwise of them is to reduce them to ordinary provisions, which I refuse to do.

There should be made similar consitutional provisions for states as provided for Union, deleting the 'break-down' clause.

1.8 It is for those who propose re-consideration of Article 3, to place their views. On understanding those views I will be able to express mine. Not at this stage.

PART II

LEGISLATIVE RELATIONS

2.1 Instead of imputing the alleged encroachments to the Union, the proper method would be to impute the same to the actual and responsible functionary in the Union.

The proclamations of Presidential Rule in more than 200 instances, are concrete cases.

2.2 The concept of unity and integrity of the Country is different than the concept of the strength of the Centre. The former concept is related with India being made a self-governing Community. Diversity in unity cuts arcoss this concept. So also the concept of the strength of Centre cuts across the concept of unity and integrity of the Country. The three lists, namely that of the Union, State, and Concurrent should be changed only if subjects of national importance are placed in State list and vice versa. Subjects like that of labour, Tenants, Scheduled Castes, Scheduled Tribes, Backward Classes, Weaker Sections should be included in the Union List.

2.3 Such a principle of consultation is quite desirable.

In pre-Independence days such Instrument of instruction was there in 1935 Act. Now its place, in Independence days, has been taken by the Directive Principles embodied in the Constitution with this difference namely these are the Instructions issued by the constitutional Assembly to the Govt. of the day at the Union as well as in the States.

2.4 As stated in reply to Q. 1.7, the Constitution contemplates always Constitutional Govts. at the Union and the States. The provision mentioned in this question is not come into operation in ordinary course. Such provision is there simply for the reason that the Constitution should not come to be considered as wanting in an exceptional contingency.

2.5 A suitable Constitutional provision may be considered to deal with the abuse of the Constitutional power. Please also refer to earlier reply containing in the concluding portion.

PART III

ROLE OF THE GOVERNOR

3.1 Under the Constitution of India, the Constitution makers had envisaged almost the same role for the Governor of a State as the role for the President of India in the Union. There is, of course slight variation between the two. Role of the Governor, as well as of the President of India, are mainly in connection with being one of the Components of the State Legislature and the Parliament respectively; and also acting as the Constitutional Head of the State and the Union respectively.

(a) The Constitution hardly envisages any role, as such. for the Governor, or for the President of India, in the context of Centre-State relations.

(b) The office and the powers of the Governor are misused by the Prime Ministers of India (mostly by late Jawaharlal Nehru and Smt. Indira Gandhi), presuming wrongly that the Governor is an agent of the Union Government. It is in this wrongly presumed context of Governor being such an agent, that new theory of role of Governor in the context of Centre-State relations is being advanced. Centre-State relationships can be maintained only by patriotic sentiments and actions. Hardly a Governor can do such a job. The misuse of powers of Governor for the last 34 years for Party and other purposes has already damaged the Indian polity, and there will hardly be a truly Constitutional Government, either at the Union or in the States, if present state of affairs continue. To appreciate the correct meaning of 'Constitutional Government' it must be noted that absence of it means rebellion.

3.2 Reply to this question is covered by the previous question 3.1. The only role for Governor for any purpose, including of fostering healthy Union-State relations is that he should act perfectly Constitutionally.

3.3 Under the Constitution, Governor has hardly any functions or duties. So the President of India, Governor, like the President of India has only two prerogatives :

(a) It is only when there is a Constitutional 'breakdown' in the state that he is to make a report to the Persident of India. This means no Government can be carried in accordance with the provisions of the Constitution. If there is a Government functioning in the state, such a report by him would be the abuse of his office.

(b) To appoint a Chief Minister is the sole prerogative of the Governor under Art. 164. Nobody else including even a Prime Minister can displace his prerogative. He may use his exclusive prerogative even wrongly or foolishly and suffer the consequences. In India, such a Governor is yet to be seen.

(c) Dissolution of the Legislative Assembly is the second prerogative which the Governor can use as indicated in (b) above.

These are incidents of the office of the Governor, which run with office and any attempt either to minimise or to maximise the incidents is to wreck the system of Government. The amendment made by forty-second Constitution Amendment Act to Act 74 surcumscribing the prerogatives of the President has done enough damage to the Constitution and to the system of Government, which is bound to cost India, also in future.

3.4 Wherever there is a second chamber, either the second chamber is superficial or the reservations of the bills for the Governor or President is superficial. The underlying purpose is to guard against to any hasty enactment.

The latter part of this question can be answered only by those who are or were Chief Ministers. I am none.

3.5 Partly yes; and partly no. Speaking generally the precedents cry aloud what Lord Action said "power corrupts; and absolutely power corrupts absolutely". Partly no because, it would depend upon the nature of grounds on which the assent was withheld.

3.6 The former part presents correct position, and not the latter. Kindly also refer to previous reply to Q. 3.1. So long as Governors men of a political party, and are under the obligation of appointing power the Prime Minister they cannot be expected to act impartially and in accordance with the Constitution when interest of the political party (as also of the appointing power) conflict.

The instances of N.T. Rama Rao and Dr. Farookh Abdullah are recent.

3.7 The nature of the office of Governor is such that he cannot have a guaranteed term. The procedure of his removal should be the same as in case of President of India, in which case the Governor will have to be elected. The appointment and removal go-together.

3.8 No. The job of a Governor or of President of India is to see that there is a Government to govern. His job is not of majority-maintenance. In England there were a large number of minority-Govts. over a long period. Apply this suggestion to empowering the President of India for exposition of its futility.

3.9 May not. It may increase No-confidence-motions. Governor should act rightly.

3.10 Where from the Administrative Reforms Commission got the so-called 'discretionary' powers of the Governor. He has only two prerogatives. If guide lines are to be issued to Governor, they will have to be issued also to the President of India for the performance of similar role.

PART IV

ADMINISTRATIVE RELATIONS

4.1 It is for the Chief Ministers or ex-Chief Ministers to reply this question.

4.2 Subject to what I have stated earlier I am inclined to hold the second view, for the reasons stated earlier.

4.3 This is a commonsense recommendations which may be accepted.

4.4 The power under Art. 356, is generally not exercised properly. The reasons are : as in the cases of Andhra Pradesh & Jammu and Kashmir, the expression namely "........the Government cannot be carried in accordance with the provisions of the Constitution" is misconstrued, even if there is a Government carried in accordance wtith the provision of Constitution. Secondly Governors, in such, alleged situations, have acted without 'aid & advice' of Council of Ministers with Chief Minister as the head of it. Third reason is : such alleged actions by Governor, transform a Parliamentary system, into a sort of Presidential one, at that moment.

4.5 I do not agree with that view. Clause (5) of Art 356 is not a safeguard. It is unsafeguard. Art 356, should not be invoked unless in the rarest of rare cases. failing which a state may be declared as unfit for self-rule, and should be administered as such.

4.6 I wish to offer no comment in this regard.

4.7 Such Agencies should be entrusted to whosoever is able to implement the principle of responsibility more effectively. (i.e. either Union or States).

4.8 Services are an integral part of autonomy. Provinces are usually made autonomous. Under Constitution there are no more Provinces. They are States. Such of the services confined to local State area should be under the control of State-services. Services necessary for implementation of State List

should also be brought under State Services as distinguished from All-India-Services, with corresponding responsibilities attached to States and the Union respectively.

4.9 Law and Order problem is a very serious one. Under the present Constitutional provisions the views of the Administrative Reforms Commission is regrettable. The contingencies contemplated in Art. 355 are different and of special nature. Such a view of the Commission or of the Union will supply enough material for a possible future war between the Union and the States. Either the law & order subject be retained with the States and the Union should aid them; or this subject be taken over by Union and accordingly Constitution should be changed. Mid-way is dangerous.

4.10 Those in need of broadcasting and television facilities of mass-communication are the Union, States and the different communities of the masses. These facilities should be shared by these three on a fair and reasonable bases as three are in equal need. In the name of the Union or States certain very few communities are misusing these facilities which may invoke very strong protest.

4.11 Zonal Councils have hardly served the purposes.

4.12 Establishment of such a Inter-State Council is long over due which the Union Government has regretfully avoided. However, such inter-state council will not be competent, to 'iron out the inter-state' or 'Union-State differences' as has been put in this question.

If the disputes are touching the decision of power, the Supreme Court of India would be real forum to adjudicate the same. Otherwise Supreme Court would be, to that extent, superfluous in a federal set up.

Such Council is meant to serve Public interest. Its functions are stated in the Article itself of Art. 263.

PART V

FINANCIAL RELATIONS

5.1 No.

5.2 The observations of Study Team of A.R.C. "Centre as always the giver and the States the Receiver" are regrettable and this kind of relationship which is analogous to what existed during the British Imperialistic Government should now after Independence, be scrapped. If the State-resources on their own are not enouh, then the resources between states and the Union deserve to be recast in a manner to make the states autonomous financially, consistently with their responsibilities.

Alternatives indicated in (d) may be tried.

5.3 My views on the observations are :

Directive Principles are not properly quoted. All the people of a rich state are not rich. In a rich state few classes are rich; some are poor; and the rest poorest. Similarly, all the people in a poor State are not poor. In a poor state also few classes are rich; some poor, and the rest poorest. Thus to classify States as rich or poor is misleading. Truly, it is the class of the people, who are rich, poor, and poorest.

Is the Union prepared to make a public solemn declaration that it needs to be strong in order to use its funds for the development of poorest classes? There is no evidence so far to sustain such a claim by the Union.

5.4 The Union Govt. must produce the necessary evidence of the last five year-plans in the fulfilment of the objective in question. Though deficit financing is harmful to the last consumer, yet if the amounts of deficit financing are to be used for developmental work of the poor classes, and not for sustaining the Govt. the same way may be resorted moderately.

5.5 The objective criteria should be :

(1) More the concentration of power in a poor state greater should be the share in taxes, and plan and non-plan assistance with specific reference to development of the poor classes.

(2) Less the concentration of the power in a rich state lesser should be the share in taxes and plan and non-plan assistance.

5.6 That Finance and Planning Commission are not adequate for the purpose is proved by results obtained so far after Independence.

On territorial basis, a 'Special Federal Fund' and on poor classes basis a 'Special under developed classes fund' should be established.

5.7 Besides the three principles enunciated, the other one should be accepted namely the responsibility to give its citizens tha minimum civilised life, applying the test that those who are denied the opportunity will have the priority.

5.8 Central levy subject to control by a Council of Central and State Finance Minister would be inconsistent with the principle of responsibility.

5.9 Such proposed permanent Finance Commission would also be inconsistent with the principle of responsibility.

5.10 As such conditions were not attached by the successive Finance Commissions, under the Constitution of India, the expected results would hardly be realised.

5.11 Yes, I boradly agree. Such results are obvious, because of absence of principle of responsibility. The correctives would be to :

(i) Enact a law of the Parliament determining (a) the qualifications which are requisite for appointment as Members of Commission (b) the manner in which they shall be selected.

(ii) Involve the effective representatives of the class of people for the benefit of whom the resources are transferred.

(iii) Impose statutory obligation on State Government of submitting periodical terminal reports on the projects under taken under the transferred resources.

(iv) Apply the principle of responsibility.

5.12 My comment about the proposition in question is that it is not even a 'broad' one. Neither it is radical. Such proposition is as old as the year 1877 to 1882; and by nature quite imperialistic as that of the British, during which period Sir Richard Temple advocated, resource-transfer, through taxsharing for keeping in with the sentiments that it is the province itself which realises the tax-money, which is also for its own use. The Seventh Finance Commission of the year of 1984 is recommending propositions of the year 1977-82 which may not be conceded without the principle of responsibility.

5.13 The priority suggested by the Seventh Commission is perverse cutting across the very basis for which grants-in-aids are made. These grants should be used only exclusively for the purpose for which made. The principle set out by the Seventh Finance Commission must be scrapped.

5.14 Divisibility should be governed either by the existing provisions of the Constitution or by amended provision.

5.15 Not satisfactory.

5.16 My comment is either the States are incapable of enforcing their own responsibility in financial matters; or Union has robbed their responsibility.

5.17 In the name of State a group must be playing with the finances of the State without being responsible whatever to anybody. The measure would be strict enforcement of responsibility.

5.18 I agree to a certain extent the restriction can be relaxed to the extent they suffer by virtue of not having the necessary freedom in the matter.

5.19 Not justified.

Transferring foreign credit obtained for financing State projects through the Centre is wrong and unethical financial transaction. Centre has been habituated of transferring foreign credit, as well as transferring various sums provided in the budget for the Scheduled Castes, Schedued Tribes and weaker section to other projects, and allowing such sums to lapse. There was no effective public opinion raised against this mal-practice. Therefore now it is the turn of States for being deprived of. Public opinion protest against all such types of financial transactions is called for.

5.20 Reserve Bank of India should reflect in its functioning and administration the interest of each communities as well as qualify it as a Reserve Bank of India, besides co-ordinating the borrowings for Centre, State, and Private sector.

5.21 The factors contributing to 'unhappy position' of States finances are :

(1) That there is an absence of good Govts. in the States as well as the Centre.

(2) And similarly there is absence of sound financial system to sustain good Governments. The unhappy position of the States as old as when the Provinces were created by British Imperialistic Govt. It simply means that though there is adult franchise and Parliamentary and State elections periodically, there is yet an abuse of Govt. by the people, of the people and for the people.

5.22 Yes, to some extent.

I would suggest implementation of the Directive Principles particularly Art 39 and specially its clause (8) about the ownership and control of the material resources of the community are so distributed as best to subserve the common good.

5.23 By itself, the Convention prior consultation with States is not going to improve the financial system as a whole.

5.24 Yes.

5.25 It may be to some extent.

5.26 The grant be revised and enhanced in proportion.

5.27 Yes, grievence, is justified.

The measures I would suggest are

(1) Either the Union Territories with Legislative Assemblies should be pomoted to full statehood;

(2) Such of Union Territories which are truly reflecting the characteristics of U.T. should be responsibility of the Union ;

(3) Concept of Union Territory should not be debauched.

It would prove to be very dangerous to unity of the country.

5.28 The finance of the Union as well as of the States are to be so divided as to make their self-reliant in any contingency. Till now the responsibility does not rest with the people either at the Union or in the States.

For obtaining maximum use of relief assistance in the present circumstances is to enforce strictly the accountability and responsibility.

5.29 My views on the suggested three All-India-Institutions are :

(a) They are overlapping each other;

(b) It will be a Dyarchy;

(c) Responsibilities will be divided;

(d) If the differential interests of the States suffer, which are to that extent powerful organs how much more the economics interests of the various communities and citizens are bound to suffer under the present economic system.

(e) The real remedy is not sought and confused propositions suggested.

5.30 For fulfilment of conditions of spending the funds prudently and benefits going to largely to the people, who collect and distribute funds may become relevant unless the same is also done by the people.

5.31 Call the Commissions by any name. What is their constitutional position; and how the principle of responsibility to be enforced. Whether the Parliament and its members have all failed ? Whether one likes or not but in the whole Questionnaire a case is irresistible that just as the British rulers though good administrators were incompetent to achieve the welfare of the people of India, so it appears the Governing class in India is by the same token incompetent to do the same.

5.32. The reports of the Comptroller are seperately submitted to the President in case of Union accounts and to the Governor in case of State accounts. This shows a relationship bearing on Centre-State.

5.33. In addition to voucher audit, evaluation should also be pursued in good time.

5.34. Under the Act sufficient powers and duties have not been enjoined upon the Comptroller and A.G.

5.35. These reports are not comprehensive enough. It should clearly point out glaring omissions, inconsistencies, illegalities and comparative evaluation audit.

3.36. It is no sufficient check today. But it should be a sufficient check in future.

5.37. Can and should act as a watch dog.

5,38. I do not think Expenditure Commission is needed.

5.39 Authorising the States to do so would defeat the underlying purpose. Centre should have the means to ensure that the funds meant for specific purpose are in fact utilised.

PART VI

ECONOMY AND SOCIAL PLANNING

6.1. The three short comings, among others noted by A.R.C. study team, reflect on alarming picture of disorganised state of affairs which can be hardly called "Planning" of National perspective.

Remedial measures I propose are :

(i) There should be a sub-committee representing the Union, of Planning Commission, only for subjects exclusively falling within Union List.

(ii) There should be another sub-committee representing the States, of Planning Commission only for subjects, exclusively falling within State List.

(iii) There should be a third sub-committee representing jointly the Union and States of Planning Commission only for subjects falling within concurrent list.

(iv) These three sub-committees of Planning Commission should be co-ordinated by the Planning Commission presided over by P.M. and submit its co-ordinated report to National Development Council.

(v) The N.D.C. Council should represent Union, States, Union Territories, and representatives of different Communities.

6.2. As stated above in reply to Q. 6·1.

6.3. As stated in reply to Q. 6·1.

6.4 Union should have its Union Planning Committee under the Chairmanship of the P.M. Each State should have its State Planning Committee under the chairmanship of the respective Chief Ministers. Also refer to reply to Q. 6·1.

The contents of this reply and the reply to Q. 6.1 if acceptable should be embodied in the provisions of the Constitution of India.

6.5. As in replies to Q. 6.1 and Q. 6.5.

6.6. Please refer to replies to Q. 6·1 and Q. 6·4 also the modifications I propose are :

(1) In State-Plan pertaining exclusively to subjects in State List, the decision of the State Planning committee of the concerned State should be final subject of course to co-ordinated adjustments by the Planning Commission and N.D.C. In this Plan no National priorities can arise.

(2) In the Union Plan pertaining exclusively to subjects in the Union List the decision of the Union Planning Committee should be final, subject of coruse to co-ordinated adjustments by Planning Commission and N.D.C. In this plan no question of State priorities can arise.

3) In the Concurrent List Plan pertaining exclusively to subjects in the Concurrent List, decision jointly by Union and States shall be final subject to co-ordinated adjustment as above. In this Plan both National or State priorities can be considered.

6.7. It is unconstitutional to channel any distribution of funds to States through Planning Commission. It should be on State to State basis from Union to respective states, and Union Territories.

6.8. Yes; Changes as proposed in different above replies.

6.9. The Planning Commission and N.D.C. working under the Union Govt. have failed to remove poverty and achieve balanced regional development. The shares of weaker sections of the people and undeveloped regions are being sacrificed under the cover of Planning. There is absence of Planning as 'might is right' works, in both the Union and the States.

6.10. Please refer to replies to Q. 6.4, Q. 6.6., Q. 6.7 and Q. 6.8 above.

6.11 The present machinery is not only inadequate it is illusory, meant for perpetuating the backwardness of the people. This machinery deprives the needy and breeds corruption. The real and effective representatives of the people for whom the schemes are formulated should be associated closely involved on a democratic basis, in the matter of implementation of schemes and if necessary in the formulation of schemes and place before the respective Legislators the periodic reports of the implementation from time to time.

6.12. Covered by above replies.

6.13. Whether it is Union Planning or State Planning, the categories of people for whose benefit the schemes are meant should be involved in the implementation of those schemes democratically, periodic reports of implementation should be placed before the Legislature concerned; publicity about implementation and such reports be made in local newspapers.

PART VII

MISCELLANEOUS

Industries

7.1 Please refer to Dr. B. R. alias Babasaheb Ambedkar's (the Chief architect of the Constitution of India) memorandum submitted to the Constituent Assembly, particularly at page no. 14 to 16 of that memorandum which suggests :

(1) Key industries to be owned and run by the State ;

(2) Basic industries to be owned by the State and run either by State or Corporation;

(3) L.I.C. to be the monopoly of the State; and

(4) Agriculture to be made the State Industry.

The explanatory nores of Dr. Babasaheb Ambedkar are at page nos. 30 to 35 of the said memorandum. I have adopted these as suggestions, which the Commission should seriously consider.

7.2 (1) Yes, there should be some norms. Reasonable way to laying such norms to give opportunities to all communities.

(2) Deletion is not necessary.

7.3 There should be constituted all-communities-Industrial-Development-Council representing all communities who should be empowered to decide the guideline for these matters including clearance of Capital-issues, import of capital goods, and raw materials, and foreign collaboration.

7.4 (a) The States have not organised sufficiently to support this small sector; nor for the elimination of inequalities for the exploited communities.

(b) The glaring deficiencies of the States approach are almost the same, as the glaring deficiencies of the Central approach to the States and the Union Territories.

7.5 The working of the Centrally controlled national industrial financing institution like I.D. Bank of India; I.F.C. of India I.G. of India, L.I.C. of India and U.T. of India, is the same way discriminatory to State Plans. And the State Plans are similarly discriminatory against the exploited communities in the respective States which is not remedied by the Union.

7.6 Yes, the criticism is justified...The States must be consulted.

7.7. The criticism is justified. The Centre has neglected certain States in the matter of direct investment in heavy Industries. Nor Centre has championed the cause of underdeveloped States; or exploited communities in the states. My suggestion for all round development of underdeveloped states and underdeveloped communities in each State is that there should be established a Council for under-developed States and under-developed communities with sufficient powers to decide all matters concerning their development.

7.8. No. Another No.

Yes, As stated in reply to Q. 7.7.

TRADE AND COMMERCE

8.1 It is absolutely necessary to appoint such Authority. Such information remains a closely guarded secrets, though India is free and a Republic, and electorate is based on adult franchise. Appointment of such authority is a must. Even the present commission on its own could have called for such information either 'suo-moto' or upon the inquiries from public.

Agriculture

9.1 Mere territorial view in terms of Union and State is not enough. I would go with that point of view which will stand broadly the test of Article 39. of our Constitution which is a part of Directive Principles.

9.2 Please refer to my reply to previous Q. 9·1 above.

9.3. Co-operation between the Centre and the States would be there to the extent to which Union and States are sociologically co-operative with each other. If the Sociological impediments are removed, the co-operation may increase.

9.4 There are serious problems in Centre-State relation in those aspects namely fixation of agr. prices, irrigation, credit, forestry policy and administration etc.

The solution is in lessening sociological frictions, economic disparity failing which solution would be only political in due course.

9.5 Covered by previous replies.

Food and Civil Supplies

10.1 There is scope for improvement in the areas mentioned. The responsibilities should be tested as per provisions in the Constitution.

10.2 Yes. Should be periodically reviewed. A Commission should be set up for taking periodical review of such subjects and similar other subjects in the Constitution.

Education

11.1 Such criticism will be justified is States also want that the Centre and all States together should decide all matters in the field of Education for India as a whole. If any State is criticising individually for its own against alleged interference etc. such criticism is not justified.

11.2 The word "grants" in the nomenclature of the U. G. C. itself shows its limited purpose as to grants without any concern for education, much less for University Education. Thus the Commission like any other Central Commissions suffers from the same discriminatory attitudes.

11.3 One of the suggestions is to make the entire subject of Education only a Concurrent subject, deleting it from the Union List as well as from the State List.

11.4 I discern that there are many difficulties. In India Education is going to be a greatest problem in future. There must be uniformity of education throughout India. This cannot be achieved by present system of Education. Either the whole Education should be the job of the State without any scope whatever for private educational institutes, or whether education is imparted either by the State or private institution the syllabus for each standard, diploma or degree must be the same throuhout India. Past Political, Social structure is a grimmer and graver reminder that disastrous effects of a war.

11.5 Covered under previous replies above.

Inter-Governmental Co-ordination

12.1 Our Constitution provides for Inter-State Council. If we can be profited by the experience of U. S. A. Advisory Inter-Governmental Commission or any other similar body in any Federal State, we should be willing to be profited by the same.

Supplementary Note

(To replies to the Questionnaire on Union-States Relation)

On important issues not found place in the Commission's Questionnaire.

1. *Issue No. 1 : Transitory or non-enduring nature of States :*

The Rulers of India prior to or after the Independence of India have treated the States on the assumption that they are transitory or non-enduring. This is clear from the facts namely:

(1) Prior to Independence there were about 162 Units (whether former Princely States or former British Provinces).

(2) After Independence were formed 'A' 'B' 'C' 'D' states.

(3) With abolition of 'A' 'B' 'C' 'D' States, some bi-lingual States and some uni-lingual States were formed.

(4) These were abolished, and linguistic States were formed.

(5) Later on Union Territories, one after the other were added.

Playing by the Rulers with the formation or the abolition, or division of States; or creation of Union Territories have cost India great deal. Therefore without any further loss of time the question of enduring States must be settled with reference to principles of modern concepts of a 'States'.

2. *Issue No. 2 : Curbing of distruption of Union*

The forces of disruption of the Central Govt. have once succeeded and effected Partition of Union. Those disruptive forces under different grabs are still operative. Union is as vulnerable as the 'States'. True and effective remedies, political and Constitutional will have to be found.

3. *Issue No. 3 : South v/s North and unity*

The poison of balkanisation of Southern States, and consolidation of Northern States must be emptied at the earliest.

4. *Issue No. 4: Official language ONE OR MANY ?*

If Indians really want Unity of India more than one official Language either at the Union or in various States are bound to break the desired unity. Whether in the Union or in the States there should be one and same official language. Such of those who are opposed to such suggestion will have to explain how to maintain Unity of India.

5. *Issue No. 5 : Castes and States and Unity*

In certain areas, certain Castes are numerically greater and dominant. So much so that such States have become almost Caste-States. Caste is anti-National. Such States are bound to turn as anti-National. Therefore very strong and effective checks and balances are necessary.

6. *Issue No. 6 : Two Party-system and Unity.*

Neither Unity of India, nor Unity of any existing State can be preserved in the absence of two-party system both for Parliamentary elections as well as State elections.

7. *Issue No. 7 : Electorate and Unity*

Electoral system based on single-member-territorial constituency has failed leading to unconstitutional Presidential Rules. Plural-member constituencies in each State in certain selected areas need to be introduced.

8. *Issue No 8 : Exclusion from Political power of certain communities*

Exclusion from power is sure sign of slavery. This must be remedied.

9. *Issue No. 9 : Prime Ministership and Unity*

The Prime Minister of India should be elected by the whole House of People.

10. *Issue No. 10 : Grant of rights to Budhists—converted from Scheduled Castes.*

Depriving those who have become Budhists, of their rights acquired by the Scheduled Caste after a long and better struggle is a discrimination against religion. This discrimination is most immoral particularly in view of the fact that there is no remedy to remove untouchability.

11. *Issue No. 11 : Question of Boarder States*

Such a question is a National question, and as such should be settled only on the National level in consultation with representatives of all communities in India.

REVOLUTIONARY COMMUNIST PARTY OF INDIA

REPLIES TO QUESTIONNAIRE

PREAMBLE

In our opinion, after a protracted period of centralisation, a period of gradual decentralisation in both political and economic spheres can alone take the country from its present moribund stage and account also for the growth of divisiveness, secessionism and tension. This also will pave the road for uplifting the backward and downtrodden tribes and other sections from its present helplessness to an active state of regeneration which in its turn will help in building a healthy nation based on national integrity, secularism and democracy.

20th November, 1984.

PART I

INTRODUCTION

1.1 In course of the three decades and a half years since the Constitution came into force. Its federal form has been retained, but its federal content has been greatly eroded. The trend is toward concentrating more power in the Union at the cost of the States.

1.2 Articles 251 and 365 need to be suitably amended so that when different parties are running the government in the Union and in a State or States, the political prejudices of the former do not impede or thwart or prevent the exercise by a State legislature or Legislatures of the rights conferred on it or them by the Constitution.

1.3 to 1.6 It is undoubtedly true that a country of such size and diversity of population, culture and language as also unequal levels of socio-economic condition should have a large measure of devolution of resources and responsibilities to the States from the Union. A lot of conflict and tension has arisen because of the trend of the Centre to arrogate to its powers which should rightfully belong to the sphere of the States. The unity of the people and the territorial integrity of the country have paramount importance.

1.7 The Constitution should be suitably amended to restructure the obligations of the Union and the States.

1.8 The power of the Centre in the exercise of the Article 3 of the Constitution should be left undisturbed.

PART II

LEGISLATIVE RELATIONS

2.1 & 2.2 The Constitution, as it was originally framed, had apportioned the respective powers of the Centre and the States in more or less liberal way. But over the years the Union has continued to increase its sphere of power by encroaching on the rights of the States. According to our view, the Concurrent List should be carefully scrutinised so that those items in it which can be and should be left to the purview of the State should be transferred to the States while those in national and public interest exercised by the Centre should go in the Central list.

2.3 Yes.

2.4 While it is not possible to make a list of "national" or "public" interests, the nature and character of what should be considered a "national" or "public" interest should be clearly spelled out in the Constitution. Such powers should not be exerciseable by the Union for a period beyond six months.

2.5 When the parliament seeks to enact a legislation that infringes on or materially affects the right of the States as guaranteed in the Constitution, then the rough bill should be mooted through the Inter-State Council to the State/States concerned before introducing in Parliament.

PART III

ROLE OF THE GOVERNOR

3.1 Over the years, the office of the Governor has come to be more and more misused in the interest of the party running the Union Government and against the interest of the State Governments blatantly for political reasons. The Constitution makes the Governor the formal or titular head of a State but there are instances galore of a governor interfering in the day to day administration of a State which, as a formal or titular head, he is not only not supposed to but is not required to do.

Arbitrary dismissal of an elected State Government enjoying a majority in the legislature and equally arbitrary induction of a new government without ascertaining whether or not they command a majority in the State Legislature violating both the letter and the spirit of the Constitution, has been a rule rather than an exception in recent times. Witness Sikkim,

Jammu and Kashmir and Andhra etc. The Constitution should be suitably amended so as to make it obligatory on the part of a governor to verify the actual strength of a government which is supposed to have lost majority, on the floor of the House (unless the Chief Minister on the ground of his having lost majority) and to test the majority claimed by a new party or coalition of parties in the House within fifteen days of the swearing in of the New Government.

3.2 The Governor can foster healthy Union-State relations only if he abides by the letter and spirit of the Constitution, if he refuses to act in the political interest of the party running the Union Government. In this connection it is also necessary to amend suitably Article 164 which makes the holding of the office of the Chief Minister or Council of Ministers absolutely dependent on the "Pleasure" of the Governor. As the Governor is the titular or formal head of the State and as the Governor is supposed to act on the advice of the Council of Ministers headed by the Chief Minister who is responsible to the State Legislature, Art. 164 should be so amended that the holding of the office of the Chief Minister depends on his commanding the majority in the House, rather than on his enjoying the "pleasure" of the Governor, who can exercise his "pleasure" without reference to and independently of the State Legislature.

3.3 If the Governor exercises his independent judgement without prejudice and without such extraneous considerations as the political attitude of the Union Government to the State Council of Ministers and if the questions as to whether or not a Council of Ministers enjoys the confidence of the House or whether any other party or coalition of parties can command the majority in forming a new government, are left to be decided by the House itself, the chances of abuse of power under Art. 356 (1) will be considerably reduced.

3.4 There are specific instances of West Bengal bills being with-held by the President as cited in page 9 of 'Reply to questionnaire by West Bengal Government'.

3.5 (i) Centre dictates, (ii) Presidential with-holding of Bills—a threat to State Autonomy, (iii) Undue delay in most cases.

3.6 Yes. The Governor should be, rather than is, a close link between the Centre and the State. But the Governors of States other than those ruled by the Congress Party; have not acted impartially.

3.7 Yes. But concerned State Government's opinion should be taken into account before appointment.

3.8 Yes.

3.9 We do not think that the procedure adopted in the German Federal Republic is suitable for our purpose. Such a procedure will also not be necessary in the case the appointment of Governor and the Selection of Chief Minister are made in the manner suggested above.

3.10 It would be difficult to formulate "guidelines" on the manner in which the Governor shall exercise his discretionary powers but it is very important that the circumstances warranting such an exercise of the discretionary powers are sufficiently clearly spelled out.

PART IV

ADMINISTRATIVE RELATIONS

4.1 to 4.3 It cannot be gainsaid that the provisions made under Articles 256, 257 and 365 can altogether be done away within a federal structure. But it is necessary that they are not misused by a Union in quashing the State/States' rights to the Union for political reasons. In our opinion, the Constitutional implications and the operating ambit of these clauses need a thorough reexamination for amending the said Articles.

4.4 Looking back over the three and half decades since the Constitution came into force, it cannot be denied that the powers given to the Union under Article 356 have more often than not been misused. While it is true that this Article cannot be done away with, the modalities for its exercise have to be evolved so that the Union cannot abuse these powers for political consideration.

4.5 The maximum period for such a proclamation should be reduced from the present three years to one year.

4.6 Yes, working satisfactorily

4.7 While the functioning of the organisations do not make undue inroads into the State's autonomy, we do believe that all of them can be more useful to the States. For that, it is necessary that the representatives of the State or States should be included in the Governing bodies. The modalities of selecting the representatives of the State should be mutually agreed upon.

4.8 We do believe that the All India Services have a vital role to play in ensuring uniformity in the day to day functioning of the State Governments under the provisions of the Constitution. But we do believe that the training of both the IPS and the IAS has to be thoroughly re-structured so as to make the members of these two cadres' service people oriented under the discipline of the State where they are employed.

4.9 While Article 355 cannot be done away with, the Constitution should be so amended that the right of the Union to use, suo moto, the Central Reserve police and other para-military and military forces in aid of civil power in any State is done only when communal riots have broken out or when the territorial integrity of India is in danger.

4.10 Reply already given in 2.1.

4.11 The Zonal Councils should be re-activated. They should meet at a regular intervals for the disposal by a permanent secretariat.

4.12 Yes. It is desirable.

PART V

5.1 The plan and discretionary transfer has fallen rom 60% to a much lower figure. The constitutional thought of "automatic and free from interference" has not materialised. While considering this question instead of assessing the total resources as well as for the public domain for the use of the nation, only the central transfer to states are considered. As this is a correlated question, the estimation of a social equity and the evolution of available resources should be the principal determining factors. It is vital for the development of the nation as a whole to have fiscal planning of States where complementation and Supplementation are absolutely necessary. A new alignment on the basis of resource-planning, resource-development and resource-distribution in an integrated manner can foster the national growth. Finance Commission which is an appendage of the recommendary body should have independent and over-riding capacity for implementing their recommendations.

5.2 The dependence of the States on the Union has grown for the last thirty odd years. The Union's fiscal and resource-using powers are arranged in such a manner that it would raise resources only to meet the short term requirements. The growing needs of a society in the transitional period between backward feudalism and advanced capitalism needs a redefinition of fiscal resources. Firstly, the present trend of truncating State List by absorbing them in Concurrent, Central List is to be changed. Secondly, a shareable pool of all taxing heads and powers is to be built up. Thirdly, objective assessment of the shares to be allotted to the States should be built up not only on the basis of the principle of performance but also on exigency of our unevenly developed country. The objective is to keep the mind open and look at the question of social, cultural needs of different areas of the country. The national monetary policy embracing all these, is to be formulated. The States should have their particular say. To solve the problem of equitable transfer of resources the above measures are the immediate task.

5.3 More financial power to States should not automatically tilt the balance in favour of richer States. The richer states having higher growth rate have to always help the weaker states with a lower growth rate by subvention, the policy of which should be formulated by Inter-State Council with a view to not only distributing equitably but also fostering national growth. Secondly, the Inter-State disparity cannot be done away with unless the above is impartially and objectively implemented. The present tendency of the resource-transfer from the Union to States smacks of arbitrariness and is detrimental to social and economic equity.

5.4 The resource-availability is a factor. The management needs control of expenditure. Effective and efficient use of deficit finance will not always lead the country into a blind alley.

The resource-assessment and development is the first criteria before the measure of deficit financing is introduced. Today the deficit financing has led to inflation and heightened the project costs with respect to time of implementation. This leads to industrial recession and imbalance between the industrial and agricultural growth. National consideration on this is of paramount importance.

5.5. & 5.6 The criteria for resources should be based on equity principle. The question is how to ensure adequate resources for the States. On the one hand encroaching upon resource-raising areas of the States and on the other hand creating a special fund is not called for. Suitable amendment in the Constitution should be made to avoid such encroachment and assure equity in reasources-sharing. Financial share of resources from the Union to the States is done arbitrarily and not equitably. Unless the Constitution is clear cut on the directives, the matters will not improve at the time of centralisation. Unless Centralisation is limited and reversed, the dencentralisation, signifying the resource-availability, will not be realised. Monetary resources with economic fiscal management is to be left to the States. Unless the States are on their own in their taxing and borrowing powers they would not be able to have economic management. The free delegation of fiscal responsibility to the States would not only stimulate the growth rate of the States but also of the Union.

5.7 All the three prinicples stated in the questions would be upheld even if concurrence rests on financial availability. This will strengthen the flow of resources. Most of the fiscal items covered by Arts. 268 and 269 are transferable to the States' Governments and would pave the way to availability of such finance.

5.8 There is no justification in total centralisation of all taxing powers. Here the States are denied of tax-raising power. As it should be in a federal polity, the Centre should act in consultation with the States for the distribution of the fiscal power. If necessary, such decentralisation of taxing powers in imposition as well as in administration with regard to local conditions should be introduced. Pre-independence taxation structure is completely out of date.

5.9 The plan and non-plan transfer should not have any distinction. The present practice is distinctive and arbitrary. This has created a situation of uneven and unbalanced development. The allocation to the States should depend on assessment of resources to create Inter-State equity. The Planning Commission is not so constituted. If the present trend is continued the decision for fiscal transfer should rest on an independent body under the Inter-State Council.

5.10 Finance Commission have attached undue weightage to the gap filling approach. This has resulted in some States overstating their gap, while some other have no incentive to reduce the same. On the other hand the arrangements have not led to narrowing inter-states disparities.

5.11 The view is valid. The present approach in the aspect of filling gaps in the capital and revenue accounts should be abandoned. Asset of independent and objective criteria should be laid down to determine the allocation between the Centre and the State as well as among the States.

5.12 A solid foundation should be laid for equitable transfer of fiscal resources between the Centre

and the States and among the States. If this is done, tax-sharing and grants-in-aid can improve the Centre-State relations.

5.13 Grants-in-aid should be replaced by resource-sharing in the transitional period. Better-off states should not be favoured with this save in case of emergency. To dispel any misunderstanding this should be allocated by Inter-State Council alone.

5.14 The share divisible pool should include the totality of resources raised by the Centre on both revenue and capital accounts. This should include as in the 'Question' the special bearers bond scheme, revenue from administered prices of petroleum, coal as also from income tax surcharge, corporation tax, wealth tax, estate duty, custom duty, excise duty, central excise tax. This should also include the investment pattern of LIC and Unit Trust. Regarding the above, the present policy is arbitrary. The turnover of all LIC and Unit Trust in a particular State should, in co-relation to other fiscal activities of the State, be determining enough for allocation on a Zonal or State basis. This also holds good for National Savings Certificate, Postal Cash Certificate. Our contention is where the people of the State are creating these funds, they should have a share in its investment pattern. This also should be a critically determining factor in the Deposit/Advance Scheme of the nationalised bank's operation. The central interest tax of 1% on loans taken by Terms Deposit holders from banks is very much arbitrary. The State should have at least 50% of the interest tax charged by the Centre.

As the States are entitled to 85% of the proceeds from income tax, most of the above listed funds should have 25% to 85% for the revenue raising scheme to be utilised by the State; the only exemption be in the case of National Defence Certificates.

5.15 There is no denying that the total savings available in the country should be shared between the public and private sectors. Whereas public sectors should devote this to the growth of heavy, key and basic industries, the private sector also may be allowed to fill in any gap in the above. The private sector should be mainly entrusted with the establishment of consumer industries, if necessary through diversification. If this policy is followed by an equitable distribution of capital by fixing of priority, the balanced growth will be assured. The fixation of share for the distribution of the tax and non-tax revenue in the capital receipts is important to assure this balanced growth. The way such distribution is being effected is not satisfactory, for the simple reason that this is leading the country to price inflation, industrial recession and growing unemployment.

5.16 The evaluation is not correct. The deficit and total disbursement proportion of the State Governments is well below that of the Centre's. The State's fiscal difficulties are the direct result of the shrinking shares of the States in both Centre's capital receipts and direct market borrowings.

5.17 The indebtness of the States whether massive or not, depends not on absolute figures but on relative conditions. The Inter-State Council should make a periodical review with a view to writing off portion of those indebtness as and when necesssary. This decision should be governed by the criticality of the situation prevalent in a particular State. These debts are to be lessened on the one hand by countering it with a better growth rate and by promoting suitable industries or on the other by writing it off in a graded manner in commensuration with the depreciated money value.

5.18 The Constitution has undoubtedly restricted the the rights of the States to borrow. If a State Government is in deficit it cannot borrow without the explicit permission of the Centre. The gradual centralisation has led to this position of fallacy. While in the beginning more than 60% of the total public borrowings was assigned to States, it has come down to 10% now. This anomaly is retarding the over all growth. The backward States are growing more backward and thus creating a situation nearing collapse. Any principle of sound financing should be based with an idea to increase the quota from 10% to 30% immediately so that the tendency is not for reducing but increasing the share of public money.

5.19 On the question of foreign loans we have serious reservations. On the one hand, the loans and credits received from the international markets have a quite high rate of interest. This leads to price inflation and money devaluation. On the other, the quanta of shares of these loans allotted to States is meagre as well as at a higher rate of interest. Conditions of repayment are also of shorter duration than that of the Union Government to the external agencies. The review should be made where the rate of charging a higher interest and apportioning arbitrary shares of the loans received from outside world is reversed by subsidising the interest rate and by greater apportioning. The subsidy in interest and sharing of loan amount may vary from State to State.

5.20 The idea of a national Loan and Credit Council for setting borrowing limit is good, for the RBI as an appendage of the Union Government cannot perform this function. Alternatively, the Reserve Bank of India should be so constituted as to represent the total nation independent of Union Government's dictation.

5.21 This is another example of an anamolous claim by the Union. Deficit financing is 15% in the Central level and less than 3% in the State level. Deficit financing policy should either be drafted through the National Credit Council or by the R.B.I. restructured as an independent entity constituting the State's representatives. As it is true that the States should not have any overdraft limits fixed by the new policy, it is equally true that the centre should not also cross a limit of loans as fixed by the above body. This special situation needs a special policy and as such no policy should be mechanically and arbitrarily determined. A total national money planning can remove the present anomalies.

5.22 Correct. Most of the States have failed to reach their target. Most often than not they have not even set a target. Inter-State Council should set this target and allocate from the divisible pool in concord with their performance. This is a way for maximum finance resource planning.

5.23 Admittedly the Centre has been lenient in both Corporate and Income taxation matters. The Inter-State Council should firstly transfer some of those to State List and secondly fix tax rates of items in the Union List, but important to the States, with regard to yield.

5.24 That is what it should be.

5.25 As the Centre is not utilising the Article 269 the fiscal item should come to the State List.

5.26 There should be a modus operandi for estimating the income from Railway passenger fares and expenses incurred in raising such income. This would give a fair idea of income-expense ratio. Then performance-wise allocation from this pool can be made to the States.

5.27 Union territories are in special category and allocation for them depends on national consideration.

5.28 Natural calamities bring in emergency situation which can be tackled on national level. Central and State teams should assess the damage ascertain the quanta of relief and the Centre should provide immediate relief and repair the damage. Whether there should be budgetary provision or not is a secondary matter.

5.29 States should be represented on Boards of R.B.I. and nationalised banks, so as to guarantee the State's participation in developing credit policy. This should be first step before creation of such Councils.

5.30 There can not be a question of spending funds imprudently. The raising, sharing and distribution should be linked up in a manner reflecting the contribution of the States.

5.31 Adding one and more commission would not plug hole any leaks. The risk lies in the prerogatives of the Union for raising resources beyond plan target, threreby creating a ground for wasteful expenditure on the part of the Centre. The attitude is to be cleared.

5.32 Modality of appointment of the Comptroller and Auditor General needs to be changed. Inter-State Council, and not the Union Cabinet, should be the Advisory body to the President. A retired C.A.C. cannot accept appointment in private sector. Necessary benefits and emoluments be suitably adjusted.

5.33 Performance appraisal and evaluation auditing should be strictly adhered to.

5.34 C.A.G.'s powers should be extended to cover all areas of auditing, specially in relation to defence and foreign expenditure.

5.35 & 5.36 Already stated in 5.34. This will arm C.A.G. with sufficient powers to bring to public notice any particular development, pattern or trend in public expenditure.

5.37 The Estimates Committee with their present set-up and capacity should be so structured as to give orientation to the administration by their expert advice.

5.38 The C.A.G., if necessary with modification, can displace the proposed Expenditure Commission. By their detailed analysis can guide the States making proper expenditure.

5.39 C.A.G. should have adequate authority for ensuring that the funds are properly spent by the States on projects—State. Central or concurrent. No unnecessary interference should continue.

PART VI

ECONOMIC AND SOCIAL PLANNING

6.1 The two organizations in charge of economic and social planning are the National Development Council and the Planning Commission. They have no constitutional or legal status. It is, therefore, needed to supplant this by Inter-State Council with due representatives of the State Governments.

6.2 For functional purpose both the Planning Commission and National Development Council are to abide by guidelines of the Inter-State Council.

6.3 The Planning Commission by their subservience to the Union Ministries treats the State Government as underlings. This feudal heirarchical structure must be changed.

6.4 The question of including Ministers in the Planning Commission does not arise as in our view, it is a highly specialised secretariat to help in the formulation and evolution of both technical and managerial expertise.

6.5 With the stipulations made earlier, the National Development Council and Planning Commission, as reconstituted, would be in a position to offer advice on the over all aspects of planning.

6.6 Macro fixation of priorities and targets is the delegated job of the Commission. Detailed suggestions of the Planning Commission as accepted by the Inter-State Council should form the basis of the State Plan from grass root level (to start with, the administrative district level). This should be in the purview of the State. Instead of subjecting State plans and proposals to scrutiny for over-riding, the process should be diametrically opposite. The district plans co-ordinated into State Plan both prioritywise and targetwise should be allowed by the Planning Commission acting as the secretariat of the Inter-State Council. The cost performance and net work progress monitoring should be the task of the Planning Commission.

6.7 The question of channelising Central assistance by way of loans, grants etc. becomes dependent on the restructured role of the Planning Commission.

6.8 to 6.10 Once the State Plan based on co-ordination of district plans is approved and plan size determined the resources should be channelised from the Central loan and grants. Any increment in the size of the State Plan where the resources are raised by the State cannot be with-held on any ground. This covers also World Bank Loans and IDA credits which should be reissued when the Inter-State Council evolves a

master plan on a national scale by co-ordinating all the State Plans submitted on the basis as stated earlier. The Union Ministry have no behesting role.

6.11 The country is sadly lacking in the monitoring progress and evaluation of target costs. This is to be strengthened at both States and Union ends. The monitoring criteria should be preferably uniform throughout the Country; if not, it should be a uniform criteria in each State.

6.12 Indian Constitution incorporates the ideas of Panchayat body functioning. The very backward situation in which India is passing through, does not encourage as yet the advocacy of a real grass root or village level planning. When a co-ordination between the rural people and the rural administrative personnel is built up based on the administrative capability in formulating plans with a realistic view for timely execution in an effective manner both by the trained administrative personnel as well as the conscious panchayat bodies, then and then alone formulation of plans from the grass roots could be possible. As a starting point, a macro compromise should be envisaged by district level planning. This alone can evolve a viable State plan and a National Plan.

6.13 As suggested above, this would also make State Plan Boards effective as an Advisory Board.

PART VII

7.1 to 7.3 There are certain strategic defence industries, which are based on Defence Secrets. These industries are absolutely in the Centre's domain. There may also be some massive investment industries like Rail-Road-Communication-network, Hydels and Thermal Power Plants which should remain in the Central Public Sector. All other industries should be given over to the States whereby they are free to issue licence for the establishment of industries to State, joint, private sector as necessary. The present position where the State is not even entitled to look into matters of a particular industry without prior permission of the Centre is not only unhappy but also ridiculous. Thus, a considerable number of industries may be shifted to the State jurisdiction and the State can also look after the 'national' interest with no less responsibility. A decentralised structure in setting up industries heavy, key and basic and a policy of healthy nationalisation of backward industries engaged in export in the interest of the masses as well as for higher productivity and for countering imbalance in import-export trade are needed. This imbalance is bound to happen when import of capital goods and vital raw materials is essential for the introduction of advanced technology.

7.4 The above restructuring will expedite the progress and make the plan targets realisable.

7.5 The present arrangement of allowing 10% of the current capital receipts of the State is thoroughly a making of the Centre. Market borrowing has the same fate—10%. LIC holding of State Government's security has fallen by 50%. This meagre distribution affects the progress of States. The Story of Financial Institution is such, where the doling out by Centre, if any is quite arbitrary.

7.6 Any Central investment is not made on air but in a particular State. That is why it is absolutely essential to take the State into confidence in any project formulation. All the Financial Institutions are under Union Ministry of Finance. So on the clearance of the Finance Ministry to set up any project in a particular State, it should be done involving the Financial Institutions including nationalised and commercial banks operating in the State so that the feasibility of the project becomes real. The viability would be dependent on the monitoring of the project implementation by these Financial Institutions. Here also it is preferable to apportion the investment holdings to nationalised banks for supporting the projects in their territorial areas.

7.7 & 7.8 From our view point, in the beginning all public projects in the heavy sector was done in consideration of the availability of raw materials. Although these were not captive industries, still it played a great role in the total socio-industrial progress. At present projects are not being implemented in the interest of the nation as a whole. A sort of reward-punishment theory has taken hold of the Centre's decision making. The feasibility and viability of a project in a particular State is no longer the determining factor. As such, obstruction to a healthy and proper industrial growth is taking place. This is to be changed in view of the necessity of introducing advanced technology for progress everywhere throughout India and to meet the challenges of future times.

PART VIII

TRADE AND COMMERCE

8.1 It is very essential to introduce State Trading for intra and Inter-State trading in nationally important items. This is to evolve the price uniformity on nationally important items as well as freight equalisation without which price uniformity cannot be achieved.

PART IX

AGRICULTURE

9.1 & 9.2 Agricultural and all other subjected territory is exclusively state service despite the present trend of encroaching in this sphere. It is absolutely imperative not only to reverse but also to drop the present entries in Union Concurrent List.

9.3 The Inter-State Council should direct the Planning Commission for Joint Working Groups with the States with responsibilities for recommendation.

9.4 The States should be free to fix firm agricultural prices within their territories. Major irrigation projects where more than one State is involved or of national importance should be jointly sponsored by the Centre and the concerned States. Though, as in other spheres, the general line on agriculture may be determined by the Planning Commission under the aegis of Inter-State Council, the specific programme ought to be formulated by the States. Co-operation between national and regional institutions is needed for execution.

9.5 The high-handed attitude of both NABARD and ICAR does not encourage co-operation between them and State Agencies. This to be checked.

PART X

FOOD AND CIVIL SUPPLIES

10.1 & 10.2 The present policy of procurement, pricing, storage, movement and distribution of food grains and other essential commodities is detrimental to the improvement of Centre-State relations. Much co-operation and co-ordination is needed. The guidelines can be decided upon by the Inter-State Council on the operational measures arrived at. The guideline is to be worked out by the Centre in consultation with the States keeping an open view on the peculiarities of each situation. This should also be done in the sphere of price regulation so as to evolve a desirable system of price administration in the State level.

PART XI

EDUCATION

11.1 to 11.5 The diverse ethnic, social, linguistic and cultural composition of our country with desparate economic structure need proper assessment in formulating programme in the sphere of education and philosophical policy. Rigid centralisation is a grievous mistake. Transference of Education to the State List is necessary. At the same time guidelines should be there so that syllabus or standard of university education in all States are more or less uniform. Primary education should be in vernacular; secondary with syllabus in English, Hindi and vernacular medium and in the University level it should be in English and vernacular only.

PART XII

INTER GOVERNMENTAL CO-ORDINATION

Such an institution will be helpful, provided proper epresentation from the States is assured.

TAMIL ARASU KAZHAGAM

MEMORANDUM

I am grateful to you for inviting me to tender evidence on behalf of the Tamil Arasu Kazhagam before the Commission appointed to examine and review the working of the existing arrangements between the Union and the States. I am also thankful to you for forwarding a copy of the Questionnaire issued by the Commission.

The Tamil Arasu Kazhagam was born on 21-11-1946. It was started by nationalists like me who courted imprisonment in the Struggle for freedom. The first and foremost policy of the Kazhagam is to work for national integration. The second policy of the Kazhagam is that, without detriment to national integration and as a means of strengthening it, the States should be reorganised on linguistic basis.

Tamil should be made the official language of Tamil Nadu, medium of instruction in the Universities in Tamil Nadu and the language to be adopted in the Courts in Tamil Nadu.

The Central Government should have only powers that the States voluntarily surrender to it. These powers should be : External Affairs, Defence and Communications. The residuary powers including all other powers should vest in the States.

This policy of the Kazhagam will not, in any way, be detrimental to either national integration or the relations between the Centre and the States. Only on this basis, the Kazhagam, having considered the Questionnaire forwarded by the Commission, submits its views about the changes called for in the existing Constitution. Kazhagam expresses its views generally instead of answering the Questionnaire with reference to the questions enumerated therein seriatim.

Before placing its demands, the Tamil Arasu Kazhagam desires to point out briefly the assurances given to the various linguistic groups in India by the Indian National Congress, during the Struggle for Freedom, to the effect that Independent India would be established according to the structure of the Indian Nation.

India has been gifted by Nature to be federal in structure. A considerable number of people, belonging to various religious denominations live in this country.

From the linguistic point of view, several languages having their own district grammer and literature are prevalent in India. Among the languages recognised in the Indian Constitution, except Urdu, Sindhi and Sanskrit, each of the other languages has its own separate and district region. These regions have got their own distinct and individual political history. These histories are age-old and they date back to more than 1000 or 2000 years.

Indian culture, since it comprises different religions and languages, is a combination of diversities.

Bearing all these in mind the Tamil Arasu Kazhagam has to urge that India, has been destined to be in a federal structure. Only in consonance with this structure, the relationship between the Central Government and the State Government should subsist in India. The Congress has promised to the Indian people, by means of the resolutions passed at the annual sessions of the Congress and the election manifestoes released on various occasions, that the States would be constituted only on that basis.

From the point of view of the geographical features of India, the Central Government should have been made a federal Government with powers to deal with only threee subjects, viz., External Affairs, Defence and Communications. The power to deal with residuary subjects should have been vested in the States and autonomy should have been given to each State. But, unfortunately, the present Constitution does not fulfil this principle.

The Congress was all along demanding from the British that the Constitution of independent India should be framed by a Constituent Assembly comprising representatives elected on adult franchise. But, the Tamil Arasu Kazhagam wants to remind the Commission that the Constituent Assembly which framed the present Constitution did not consist of representatives elected on adult franchise. Contrary to this, the Constituent Assembly formed in 1946 consisted of representatives belonging to the Hindu, Muslim, Sikh and Christian religious denominations in complete violation of the policies of the Congress.

The Minto-Morley Reforms of 1909 came into force during the British regime. Secondly, the Montague-Chelmsford Reforms came into force in 1921. Thirdly, in 1937 another political reform came into force under the Government of India, Act, 1935. The Kazhagam wants to remind the Commission that these three reforms reduced graudally the powers of the Centre, while increasing the powers of the States.

Finally, the Constitutional reforms recommended by the British Cabinet Mission in 1946 contemplated full autonomy to the States. In support of this, the Kazhagam gives below an extract from the scheme formulated by the Cabinet Mission :

"There should be a Union of India, embracing both British India and the States which should deal with the following subjects : foreign affairs, defence and communications; and should have the powers necessary to raise the finances required for the above subjects.

All subjects other than the Union subjects and all residuary powers should vest in the provinces."

The Kazhagam wants to remind the Commission that the Indian National Congress accepted without murmur the principle of real federalism at the Centre and complete State autonomy in the plan formulated by the British Cabinet Mission. Prime Minister Nehru moved a Resolution called the 'Objectives Resolution' on 13-12-1946 in the Constituent Assembly formed on the basis of the plan formulated by the British Cabinet Mission.

The relevant portion of the Resolution was as follows :—

"wherein the said territories, whether with their present boundaries or with such others as may be determined by the Constituent Assembly and thereafter according to the Law of the Constitution, shall possess and retain the status of autonomous units, together with residuary powers, and exercise all powers and functions of Government and administration, save and except such powers and functions as are vested in or assigned to the Union. or as are inherent or implied in the Union or resulting therefrom;"

The Kazhagam wants to highlight the view expressed emotionally by the Prime Minister Nehru while moving the resolution :

"It is a Resolution and yet, it is something much more than a resolution. It is a Declaration. It is a firm resolve. It is a pledge and an undertaking and it is for all of us I hope a dedication."

Unfortunately, the British Prime Minister, Lord Attlee released a Proclamation in the British Parliament, excluding the portion in the Cabinet Mission's Plan preserving the national integration prevailing from Kashmir to Kanyakumari and partitioning India.

In spite of this, the Indian National Congress and the Constituent Assembly which functioned under its aegis, and the Government of India which was its guide, changed its policy. Nobody can say that the Congress committed itself to the policy of State autonomy only to avoid the partition demanded by the Muslim League. To say so will be to doubt the integrity of the Congress. The Kazhagam has no doubt about it. The Congress committed itself to it only because it believed that for India which was federal in nature, a Constitution with federalism at the Centre and autonomy in the States was the most suitable one.

After the exit of the British and the separation of Pakistan, the Congress and the Government of of India functioning under its aegis gave up the policy of federalism. The reorganisation of States in 1956 was based only on the demand of the linguistic nationalities. After that, grant of autonomy to the States could not be avoided and should not have been avoided. It is not a mere administrative problem, but a right of the linguistic nationalities. Justice Sarkaria Commission should not at all view the relationship between the State and the Centre as a mere administrative problem. If so considered, it may not be possible for it to find a remedy in full.

We want to remind another matter here. In India in nine States non- Congress Governments have come into power. Among them, in West Bengal and Tripura the United Progressive Front under the leadership of the Communist Party is in power. In Karnataka the Janata Party is in power. The State Governments under their rule are also demanding complete autonomy for the States. In six other States also non-Congress Governments are in power. These States and the Parties which rule them are as follows :

States	Party
Tamil Nadu . . .	A. I. A. D M. K.
Andhra Pradesh . . .	Telugu Desam
Punjab	Akali Dal
Kashmir	National Conference
Assam	Assam Gana Parishad
Sikkim	Sikkim Sangram Parishad

These State Governments and the concerned ruling regional political parties of the States are demanding complete autonomy for the States.

In this background, it will be evident that the demand for State autonomy has become a serious challenge to the Central domination. The continuance of this condition will not be helpful to the national integration of India. If national integration is to take firm roots, Justice Sarkaria Commission should examine the relations between the States and the Centre from the time of the attainment of Indian Independence. This is a request kindly made by the Tamil Arasu Kazhagam. The Commission should examine the problem of the relations between the States and the Centre on the basis of the British Cabinet Mission's Plan of 1946 and the Resolution regarding 'Aims and Objects' passed in consonance with that by the Constituent Assembly on the 22nd January, 1947.

The States constituting the Indian Union are not enjoying equal status. Kashmir has been given certain powers and political status not enjoyed by other States. Why should there be discrimination between the States according to circumstances and emergency ? To put it in a nutshell, Justice Sarkaria

Commission should recommend to the Central Government to endow the other States also with the same status as the State of Kashmir. This is unavoidable and should also not be avoided.

In this background, the Tamil Arasu Kazhagam submits its firm demands to the Sarkaria Commission. They are as follows :

1. Powers relating to the three subjects of Defence, Communications and External Relations and the allied subjects, namely, Customs, Currency and Citizenship should be vested in the Central Government.

2. Residury powers including all other powers should be vested in the State Governments.

3. In the Seventh Schedule to the Constitution, there are the Union List, the State List and the Concurrent List. The subjects in the Concurrent List should be added to the State List and there should not be any Concurrent List.

4. Since there is only one Constitution for both the State Governments and the Central Government, it becomes necessary to amend it frequently. This degrades the sanctity of the Constitution. To remove this defect, the Kazhagam demands that each State should be empowered to have its own separate Constitution.

5. If the above demands of the Tamil Arasu Kazhagam are implemented and there is true federalism at the Centre, changes in the judicial sphere are also inevitable.

For a real federal India, what is needed is not a Supreme Court. Therefore, a Federal Court is absolutely necessary. The Federal Court should have jurisdication over disputes arising between one State and another State, disputes arising between the States and the Centre and issues relating to national Constitution.

6. Article 263 of the Constitution makes provision empowering the President to constitute a permanent Council to resolve disputes arising between the States and the Centre. But so far such a Council has not been constituted. The Sarkaria Commission should recommend the constitution of such a Council at least hereafter.

7. Provision should be made in the Constitution to nationalise inter-State rivers of India.

8. Since a time-limit has been prescribed in part XVII of the Constitution of India to make Hindi the official language of India, the position at present obtains that the only official language of the Centre is Hindi. On account of this, attempts are made everyday to impose, directly and indirectly, Hindi on the non-Hindi-speaking States. Therefore, Part XVII of the Constitution should be amended on the lines of the assurance given by Nehru.

9. Whatever steps are taken by the Central Government on the recommendations of the Justice Sarkaria Commission, prior concurrence or ratification of the State Legislatures in the form of Resolutions should be obtained.

TAMIL NADU KAMARAJ CONGRESS

MEMORANDUM

What predominates in our Constitution is its unitary feature. The distribution of powers between the Centre and the States follows the pattern which was outlined in the government of India Act, 1935, and this fact stands out glaringly in several Articles of the Constitution and in the VII Schedule which enumerates the exclusive legislative power of the union (list I), the states (list II) and the concurrent legislative powers of both (list III). The executive powers exercisable by the union and the states are based on their respective legislative jurisdiction, that is on the jurisdiction given them under these three lists. All residuary matters, including taxation, are left within the jurisdiction of the union. This means that the residuary powers are with the centre.

As the VII Schedule and other provisions of the Constitution would show that the autonomy and powers of the states in the legislative, economic and financial, as well as in the administrative sphere are already much circumscribed. What has happened during nearly three decades of the Constitution is that even the restricted autonomy and powers of the states have been steadily eroded and undermined while there has been a growing concentration of powers and authority with the centre. Not only certain provisions of the Constitution, but a whole number of other factors, political as well as economic, have contributed to this unhealthy and harmful development. What stands out today is a striking imbalance in centre-state relations, the states having lost much of the substance of their autonomy.

Responsibility to implement most of the welfare activities lies with the states, whereas the sources of revenue are limited and meagre. As a result, not only the dependence of the states on the centre has been increasing, but developmental and other social welfare activities of the states have been hamstrung and even, in some critical areas, crippled. The democratic features and norms of centre-state relations have been a casualty not only to the detriment of the states and their people, but even to that of national unity and national integration. This has encouraged fissiparous and divisive tendencies and forces.

The financial resources of the states are today too in-adequate for their developmental and other welfare activities and the sources from which they can raise their revenues are also equally inelastic. As a result, the gap between their legitimate needs, and their resources has gone on widening, despite all their borrowing "overdrafts" and the so called ways and means advances from the centre.

Not only are the major sources of revenue under the exclusive jurisdiction of the centre, but banking, insurance and public financial institutions are also under its control. So are the country's economic and fiscal policies in the formulation of which the states have no say. These factors, together with the manner in which the central funds are disbursed to the states, have made the latter increasingly dependent on the centre with an escalating negative impact on the whole spectrum of centre-state relations.

The situation is further worsened by the fact that the states are denied any share whatsoever in the revenue receipts of the centre from such major sources as customs and export duties and corporation tax. The so-called "central assistance" under different heads such as "grants-in-aid", "discretionary grants', the state's share in the income tax receipts of the centre etc. are inadequate. It is the "discretionary grants" no assured assistance under the Constitution, which has begun to predominate and constitutes the major share of the total aid, giving the central government a powerful leverage for unjustly pressurising and influencing the policies of the states in many fields of the latter's activity. Occasionally, this is used as an instrument even of political pressure on the states. This has caused much resentment in the states, although under the monopoly of one-party power, such resentment has been silenced at the official level.

The role of the Finance Commission, which is appointed by the central government and whose composition, powers and functions are open to question has made no material differences to the centre-state relations over the question of resources.

The administration of five-year plans which has given rise to demarcation between planned and non-planned sectors has been taken advantage of by the centre especially to establish its control over a number of subjects in the concurrent and state lists, which come within the scope of planning. The Administrative Reforms Committee expressed its concern at this development which according to it, has tended to unite the horizontal pieces (of the so-called plan sectors in the states) into a single monolithic chunk controlled by the centre, although operated in concurrent and state lists. The national planning certainly requires well directed central authority. That authority should be recommendatory one and not a mandatory one.

It is, however, not in the financial and economic fields alone that the states are handicapped or the inroads into their powers and autonomy have taken place. The exclusive legislative jurisdiction of the states and their executive powers have been in various ways encroached upon under one pretext or another. Some provisions of the Constitution, including several entries in the Union list and concurrent list, have facilitated this. Though "industry" is, for example, under the exclusive jurisdiction of the states, the centre has acquired a very wide, almost unlimited, range of control over many industries in the states. The trend is one of extending such sweeping jurisdiction of the centre over matters which are supposed to be the state subjects.

The arbitrary resort to President's rule in the states under Article 356, some times even for sorting out the internal problems of the party in power, the provision for President's assent to certain categories of bills passed by the state legislatures, centre's control over the All-India services even when their cadre's are under the employment of the states—all this has enormously contributed to the undermining of the federal principles and of the powers and autonomy of the states.

Experience would underline not only the disturbing growth of unhealthy and harmful trends and practices, but also that of authoritarianism. Moreover, the denial of wider powers and greater autonomy to the states, which are their legitimate due, go only to bread the disruptive and divisive tendencies and forces. To counterpose the question of the unity of the country to the legitimate demand for more powers to the states is entirely misconceived and wrong.

In any federal structure worth the name, the federal centre derives its strength and authority in very large measure from the willing cooperation of the constituent states which, too must be invested with their necessary powers and authority. In order that they may be based on a strong democratic foundation, centre-state relations must necessarily ensure that both have their legitimate due in the field of powers, authority, resources and opportunity to discharge their respective responsibilities to the people and the country. The problems we face are however the concentration of power and resources with the centre, while the states badly lack them, while their development, responsibilities continue to be expanding.

In effect, the federal features contemplcted in the constitution are given a go by and it has taken the shape of a Unitary State. We are forced to arrive at such a conclusion for the following reasons among others.

1. The Indian Constitution was promulgated so as to form a strong Government at the Centre. Since the communal riots, insubordination of the princely states, foreign aggression and such dangers were rampant in the period, the constitution makers felt confirmed in their sense of the need for a strong government at the Centre. Hence they set apart 97 items in the list of powers and duties allocated in the concurrent list. And only 66 items were included in the list allocated for the state government. Further they have specified in the constitution that in the case of a conflict between the centre and the state over a common item it was the Central Government which had the final say; and also that in all matters out side these three categories the Centre alone had the residuary power. Hence according to the constitution the allocation of powers to the states is an exclusive right of the centre.

2. The amending of the constitution is not an easy matter in the nations like America where the federal system is operative. But in India the Parliament can amend the constitution in any manner it wants by means of the two third majority. The states need not ratify the amendments except when these involve certain parts of the constitution. Further even the proposal of any amendment can be brought up not by the state legislative body but only by the Parliament.

3. According to the constitution the states do not have the right to promulgate their own law. On the contrary in Russia and Switzerland the state do have the right. The Indian Constituent assembly in its role as an assembly representing the whole of India formulated the constitution. The states have to function only within the bounds of the constitution. The State of Jammu and Kashmir is the sole exception to this rule and Article 370 in the constitution has accorded this right to this state.

4. The Constitution of India has not accepted the principle of equal representation of all the states in the Rajya Sabha. The representation has been made proportional to the population and this is against the concept of federal system.

5. In countries like America every one has two fold citizenship *i.e.* as the citizen of the state of residence and as an American. But the Indian constitution has accorded only a single citizenship and this is another difference between the federal system here and elsewhere.

6. Unlike in other federal systems there are union territories in India. These are directly administered by the Central Government and do not have even the status and powers of the state governments.

7. In other federal nations the constitution does not provide for the suspension or elemination of the federal system. But there is such a provision in the Indian constitution. The Central Government may replace the federal system by unitary system in emergencies like War and Internal security problems, over-ruling the state governments. Further the President of India may dismiss the state governments on his assumption of its maladministration or its incapacity to deal with law and order situation. All these powers have rendered the Central government a feudal overlord.

8. The Constitution of India has granted power to the Parliament to pass legislation on any item in the state list, if a resolution relating to any issue or issues of national importance is adopted with two third majority in the Rajya Sabha. Similarly, the Parliament has power to formulate legislation on any item in the state list, to fulfil its commitment to international obligation. That is the central government has the right to override the powers with the state governments.

9. There is an important provision in the Indian Constitution which is detrimental to the concept of federalism. The constitution has created cadres like I.A.S., I.P.S., I.F.S., etc. The centre alone has the power to appoint men in these cadres and allocate them to various states after they qualify themselves. They are controlled by the Centre though they serve the state in various capacities. Hence they do not act in any manner prejudicial of the centre. In countries like America the state service is different from central service and their loyalty is not divided between the two governments. But in India the indirect control of the centre over the state governments administration is made constitutional through all India services.

10. The Governor of a state is appointed by the President of Indian Republic and he can continue in the post as long as the President likes. This practice helps the Centre to check and supervise the administration in the states. This is against the spirit of Federal rule. A state is really autonomous only when it has the power to choose its Governor.

11. The Indian Constitution has instituted a Central Election Commission and it has the power to conduct and supervise elections to state legislative assemblies and the Parliament. The President of Indian Republic appoints the officials of this commission. The state government has no say in the institution of the election commission and also in the appointment of officials in the commission. This is certainly against the concept of federalism.

12. In America and other nations there are two systems of judiciary. The state governments in these countries have the power to institute special courts of law to implement the acts and laws passed by their legislative bodies. But in India the High-Courts of the states function as constituents of the Supreme-Court.

13. The article 3 of the Indian Constitution is a dangerous one. Under the provisions of this article the Centre can increase or diminish the border of any State. It can change the nomenclature of any state. The Parliament has powers to do these. The state assemblies can only submit their views to the Centre in these matters. It is not obligatory on the part of the President to concede the request of the state governments. He can act independently according to his own will. In the United States of America the border of any state can not be altered without its concurrence.

14. The special feature of federal administration is the division of finance of the nation. Adequate finance should be granted to help the State and Central governments to function autonomously. But in India the fiscal policy is an obstruction for the smooth functioning of the state government and the finance allocated to it is disproportionate to the duties assigned to it. Hence the state governments are at the mercy of the Centre. As a result the interference of the Centre in the state administration assumes massive proportions.

15. The state can implement an act passed by its legislative assembly only after the President's assent. Otherwise it will be invalidated. The Governor is also invested with the power to keep in abeyance any act passed by the legislative body and the state has no powers to compel the Governor to submit it to the President. Over and above this the President reserves his right to with hold or delay any act passed by the state assembly. There is no time limit for such delay by the President. The President can also reject the act if the Centre-State relationship is not friendly or if the policy of the state government is out of tune with that of the Centre.

Our Proposals

1. The Constituent Assembly responsible for the existing Constitution of India was not an elected body by the people of India.

Adult franchise was a phenomenon unknown at that time. Only people who had property enjoyed the power to Vote. In 1946 these were the people who elected representatives to the various state assemblies. These legislative bodies elected representatives to the Constituent Assembly.

Besides, nearly one third of the Indian population lived in princely states. These people did not have the right to elect representatives to the Constitutent Assembly. On the contrary representatives of the heads of the princely states were sent to the Constituent Assembly. As a result the Constituent Assembly was not representative of the people of India.

2. The present Constitution of India was formulated prior to the formation of linguistic states. The present formation of states is very much different from what it was during the British Raj. The political and socio-economic factors of the states have undergone massive changes along with the topography. The present constitution is lacking very much in accommodating these changes. In fact the constitution is a hindrance to fulfil the aspirations of the people of a state. The Centre-State ill feeling or quarrel is a sequal to this sense of alienation.

3. The Congress was in power both at the Centre and the States when the constitution was written. Hence the constitution emphasised an Unitary system. At present many states are ruled by Political parties which emphasise the rights of state governments and federalism. Out of the 22 states in India 9 states are ruled by Political parties which fight for more autonomy and power. In most of the other states, the state governments are very powerful though they are not characterised by their demand for greater autonomy. It is better to take into account the possible impact in the future consequent upon any increase in the representation of these political parties in the Parliament committed to greater autonomy.

4. The political landscape in India presents a galaxy of states ruled by parties with different political ideologies with a centre ruled by the majority of a single party. The Constitution of India has not taken into account this pattern of different shades.

5. The 42nd Constitutional Amendment promising "Sovereign Socialist Secular Democratic Republic" was passed in 1976. It is quite unfortunate that several sections of our Constitution is against this objective.

6. The present Constitution of India has failed to respect and recognize adequately the urge for self-rule by the different linguistic Nationalities in India. The existing constitution is deficient in promoting national solidarity and will become defunct once it provides for full autonomy to states and a centre that respects the rights of the State Governments and functions in co-ordination.

7. It is disheartening to know that our 35-year-old constitution has ignited greater tension between centre and states than friendly relations. This shows that our constitution is out of joint without relevance to the existing situation.

8. We cannot redeem the ill-effects of the constitution by certain additions and deletions.

9. It is impossible to grant more autonomy and powers to the state governments within the framework of the present constitution. It has serious limitations in recognizing and granting adequate power to the State Governments.

10. Hence a new Constituent Assembly shall be formed with members elected by adult franchise. Our political party strongly emphasises the need for a new Constituent Assembly responsible for the formulation of a new constitution committed to Federalism guided by enlightened concepts of democracy and ethics.

TELUGU JAATI VIMUKTHI SANGAM

MEMORANDUM

Before going into our views on the topic, it is necessary to review the historical background of the Indian Union Government and the State Government and the State Governmental entities to have the understanding of the causes and conditions that played in shaping the present situation of Indian political irregularities. Later we like to give the factual explanations for many topics involved in this subject.

Historical Back-Ground

1. With the advent of the British Colonial rule the terms 'India', 'Indian Government', 'British India', etc., have come into common usage. Prior to the formation of British rule, this land what we call now India or Bharat was never one country with one nation. Prior to 1857, before the onset of the British Government rule, there were several kingdoms ruled by several feudal lords. The boundaries of those kingdoms were not static. The mighty annexed the weak nations. There were empires of Mauryas, Kanishkas, Kushans, Satavahanas, Moghuls, Bijayanagaras etc., but this sub-continent was never named as India or Bharat. Even in the prehistoric ages, before the formation of royal rule, when the 'Jana Pathas-rule' or 'Gana parishath-rule' was in existence, there was no country ruled by Bharats or Indians. Actually the name 'Bharat' was used to this sub-continent. It is mentioned in the scriptures too as 'Jambu deveepe' (Jambu island), Bharata varshe (Bharat time), Bharata Khande (Bharat Continent). Never it was mentioned that Bharat was a nation. There were several nations in this sub-continent with primitive collective rule as 'Ganas' or 'Janapathas'. Upto the formation of Maghatha Empire (6th Centrury B.C.) there were 56 nations (Chappanna nations) like Amga, Vanga, Kalinga, Gandhara, Kamboji, Kuru, Kuntala, Saakya, Andhra, Chola, Chera etc. Later definite nations were evelvod according to the language of the people.

What is the Nation?

2. According to the historical and political understanding of the nation, the universally accepted definition is "A Country with continuous piece of land, wherein the majority of people speak one common language and live with common economical relations, common culture, habits, and tradition". The common majority-language is the backbone of a nation. Neither religion, nor race, nor governmental power could evolve the people into a nation. In the evolution of human society, the stages of living together passed through family, gens, clan, sect, village, town, ultimately all these amalgamated into a higher coherent society of living as nation which is now the highest form of human state of affairs. The world is evolved into nations. There might be several alien mighty rulers who annexed other weak nations. But peoples' communications and living harmony were always maintained by the national spirit. The binding force of nation is the common language through which human communication and human facilities were civilised. Even the religion or philosophy was translated into the national language. There is no other force in the world which

can keep the people as one entity than the nation. So far in the world it is highest form of human bondage and there is no international brotherhood without understanding the nation and the nationality.

It is the history of the entire world that nations struggled to get independence out of the foreign rulers. The entire modern history of European countries reveal the same national struggles. Although Europe is entirely embraced by the Christianity and the entire people are of white race, still people struggled for their national independence against alien rule. Thus the English, the French, the Spainish, the German, the Finnish, the Dutch etc., nations evolved. But in Indian sub-continent after the Feudal royal regime, the British Colonialism with the power of new arms of guns and gun power annexed all the native national powers for their exploitation. Two hundred years of British rule could not make the nations into one homogeneous nation. The nations here were very ancient and each nation has its great heritage of culture, literature and common economical relationships which could not be smashed by any oppression or progressive ideology.

Evolution of Indian Nations or Indian States

3. The Indian national struggle was actually the joint struggle of the nations that went against the British hegemony. Originally the Indian National Congress was an Indian Organisation established by the Britishers through Lord Daffrin with their own henchman called Mr. Hume in 1885. Its progress among the nations until 1920 was inconsiderable. In 1928 when the Indian National Congress at Nagpur adopted the resolution that the Congress parties should be established according to the nations, then the progress of the party's activity was considerably seen. Andhra Congress, Tamil Congress, Bengal Congress, Malayala Congress, Gujarath Congress, Assam Congress, etc. were formed for the propagation of the Congress Party. The existing nations' utility were recognised, and the Congress party began to spread all over the nations. During Quit India Movement in 1942 Congress Party promised that if independence would be achieved autonomous status would be given to all nations with people power and only a federal coordinated government would exist in the centre to look after the common necessities. But later in 1947 when the British gave the Political power to the Congress party, it did not keep the promise of giving independence to all nations. Instead the Congress continued to rule the nations on the same lines that of the alien British rule. The constitution was so framed that the political power is left to the Central Government which is by no means different from the Vice roy rule of the British Regime.

The Indian constitution in the first article defined what is India:

> "India that is Bharat shall be the Union of the states".

It is very clear that there is no India nor Bharat without the states. But the State is not defined properly. It took another five years to realise the meaning of the state (in 1956) as linguistic state as a result of the struggle and self-sacrifice of Potti Sreeramulu in Telugu land. Nations realised that the hegemony of one nation over other is untolerable. The nations lead the struggles for their individuality and it last with great sacrifices of blood and lives they could achieve their individual linguistic states or national states. Thus in the Indian sub-continent states are evolved to establish recognition for the nations.

The Feudal Nations and the Democratic Nations

4. A nation is defined not according to race, religion, nor the ruler's boundaries. Historically nations are evolved according to linguistic reality. They are evolved in thousands of years of collective, coherent economical and cultural affinities. In the feudal era these nations are evolved. Later one mighty national annexes other weak nations with wars and adamant administration. When the royal rule was dissolved with the growth of capitalism, the parliamentary system was put in operation instead of kingly courts and royal hierarchy, the people of one language or one nation began to claim their own parliament for the economico-social betterment. Any hegemony of one nation over others is strongly protested. The imperialistic tendency of big nations over the weaker is opposed. A nation's resources are claimed to be utilised for that nation only. Any plundering of the resources by an alien nation or colonial imperialism is radically opposed. In the parliamentary era or democratic era, the outlook of nation, thus fundamentally, is a phenomenon to oppose the imperialism and its sabotage. Feudal national outlook was once propagated to sing its glory that how it was superior in culture and tradition than other nations. The feudal national glory is the glory of royal rulers and royal heroes who protected their nation from the alien tiraders. But the modern nation or the democratic nation stands for the people and for the integration of their own people to utilize their own sources for themselves without any foreign interest, otherwise it knows clearly their economy would be ransacked by the foreigners and subjugate them ultimately to slavery, and poverty. This democratic national outlook is predominant now throughout the world. The nations now are revolting against alien rule and alien plundering of native economy. In other words the nations are struggling for independence and democracy.

It is the era of National Struggle

5. Entire world is involved in national struggles. The present history is under the pangs of giving birth to new nations for the establishment of democracy. In pakistan, Sindhs and Pathans are waging struggles for their national freedoms. In Iran the Kurdhs are relentlessly fighting for their national independence; the Irish people have not stopped their fight to vacate the British from a small piece of their mother land; the Tibetans are struggling to release themselves from the alien rule of the Chinese. In Indian sub-continent too national consciousness has arisen. Nagas, Mizos, Tripuras, Maities, Assamese, Kashmiris, Punjabis, Tamilians, Telugu people and other non-Hindi people are now conscious of their nations and feel that they have to get self rule, and self respect. The thought of nationalism for every nation in India is so strong now a days that even some nations are boldly coming out to declare that they are not Indians and they want independence from India, like the people of Kashmir, Nagaland, Mizoram, Manipur and Punjab.

Indian Integration and States Autonomy

6. All political thoughts now-a-days are centred in the problem of independence to nations. The Indian Government is on the other hand proposing for national Integration, knowing clearly that there is no nation like India. The question of preaching integration arises when there is no possibility of Union between the nations now existing. The new terms into the Indian Political dictionary that have entered are 'secessionists', 'separatists', 'sons of the soil' and 'regionalism'. These words are coined by the Indian government to show its vehemence over he spirit of independence for nations. But it is afact that no nation in India is fully realising that it is a part of Indian Government which is vested with monopolic power over the Indian sub-continent. The integration is meant to honour the hegemony of the central government over the States.

State and Centre Relations

7. It is reality that after 37 years of so-called integration—rule of the Indian government, the problem of 'State and Central Relations' is yet to be decided. The original meaning of Indian Union Government was already wiped out. It is replaced by the deedful word 'Indian government'. There is no union of the states in practice. There is only Central hegemony over the States. The states are helpless, have no self rule, have no self respect, no decentralisation of power, everything is decided by the Central Government alone. What for the state government stands is also not clear. The differences and conflicts between the state assemblies and parliament have grown up thicker and higher. The states are subordinated to the central government. 3/4 of the taxes collected from the states goes to the Centre. The states in turn have to beg for any programme from the centre. The money that centre gives to the states is no other money than the taxes collected from their own states. The states are consciously realising the hegemony of the central government over them in the matter of economy, political solidarity and social betterment. The States began to show their distrust over the Centre. Removal of the Chief Ministers, replacing the state ministry with puppets and baffoons, by the Indian government, created helpless grudge in the states against the central government. Ultimately a stage has come that every state with a degree of difference is asking the central government not to interfere with the state matters and also asking to precise the business of the centre and the state in the administration and power. The governor post, a non entity of the people, not elected by the people, the old sore of the British regime, is still maintained by the Centre as the watch-dog over the state. Everything that is asked by the state government is to be recommended by the governor to the centre which in its turn by its own methods honours or dishonours, the acts passed by the state. All these events made the state sub-serviant to the Central Government. An atmosphere is created that in reality there is only one government in Indian sub-continent, that is central government which is named for democratic relief as Indian Union Government or federal government. Such words sound no meaning of integration among the common minds of people.

In view of the above hegemonic rule of Indian Government over the states the conflict between the centre and the states is so real that it cannot be wiped out, unless a real democratic tendency of federalism is established. It is the time to enunciate clearly what is the state and how a federal attitude between the states can be existed.

Nationalism means democracy and Democracy can never bow down before any hegemony, whatever pions nature it exhibits superficially

8. Nationality should be defined once again not with the point of view of the Indian rulers, but with the internationally accepted definition, i.e., "A Nation is one which consists of people speaking in majority one common language, living in one continuous piece of land, since the dawn of the history, with common socio economical link and common culture". It is universally accepted definition of the nation. In this light, India is not a nation. It is a mixture of several nations. A real democracy is possible where there is no hegemony over the state affairs by the alien forces. Any force other than the nation, acting to shape a nation definitely will create the conflict. In the Indian Sub-continent the conflict between the states and centre is enevitable, as long as the states entity is not considered by a federal unity.

TNLO's Suggestions

10. In order to mitigate the conflicts between the states and central government and to avert the state struggles existing against the central government, Telugu National Liberation Organisation suggests to the honourable Sarkaria Commission the following points to maintain the real federalism between the States.

1. Every linguistic state is a nation and it should be represented by its own elected members and by its own acts.

2. There should be only one election to one nation or state, and there should be only one government to each nation or state.

3. Each nation after its assembly elections, and after its formation of the Government shall send ten representatives, irrespective of their population, selected by its own way to the federal union. There should not be separate elections to the federal government or union government, otherwise the very federal meaning and purpose will be lost.

4. The national governments or the state governments are the real governments, a federal union of Indian nations will be possible only when these nations send their representatives to the federal organisation.

5. The federal organisation should not interfere with the nations or states. It has to discuss for the common benefits of all nations in the sub-continent.

6. Each nation in the federal union represents all the matters in its own mother tongue or national languages, except keeping English for the correspondence with other nations or with the federal union matters.

7. A federal union of Indian nations (states) is possible only when every nation has got the right over its native sources, business and industry for its own people. A federal government should not have the right over any nation by any means to utilize one nation's sources to others without one's consent.

8. Each nation should be allowed to maintain its own flag and its own choice of government and its own constitution including and right to secession from the federal organisation if it feels necessary and inequitable for its existence.

9. Each nation or state will contribute the funds for the working of the federal organisation.

10. There should not be any state or territory rules by the federal union.

Democracy should be made possible if the national levels, federalism is to be maintained only for the common interests of all nations.

UNITED GOANS

REPLIES

1.1 Our Constitution is not federal strictly speaking because some unique features found in other federations are absent. See Federal Republic of Germany, see U.S.A., see U.S.S.R., we strongly advocate *autonomous states*.

1.2 We entirely agree with the findings of the Rajamannar Committee appointed by the then Tamil Nadu Government urging for greater autonomy. We gave our views to the Mathew Commission stating clearly that the Supreme Court should have two wings—Constitutional Wing to hear Constitutional matters and Appellate wing to hear other appeals.

1.3 We entirely agree that there should be provision for considerable centralisation in terms of emergency. But in a heterogenous country like India, the need for complete decentralisation is a must. In other words there should be complete autonomy granted to all States.

1.4 Federation of the "traditional" type exist as a "functional" entity as distinct from an "abstract" theory. See the Federal Government of Germany, see the U. S. America.

1.5 Our Constitution is basically sound and flexible enough to meet the challenges of the present times. What we have to do is to regulate laws impinging upon certain spheres of Union State relations. We would suggest to commend the Constitution by granting greater autonomy to States.

1.6 Our independence and integrity has to be ensured at all times. Should we see any designs aiming at our Independence and integrity, article 352 of the Constitution must be imposed without delay ?

1.7 Constitutional provisions covered by articles 256-257, 354 to 357 and 365 are enough safeguards.

1.8 We think that art. 3 of the Constitution should be left untouched.

Answers to Part II

2.1 The scheme of distribution of legislative powers between the Union and the States shall be stopped once autonomy is granted to the States. All abuses shall stop. We are not here to substantiate the concrete instances of which the Commission is aware.

2.2 The distribution of powers under the legislative lists of the seventh schedule of the Constitution shall end once the states are granted autonomy.

2.3 We don't think that such a course is desirable. It is entirely the responsibility of the Centre.

2.4 Such an anomaly should end. The States are and should be competent to legislate. The States do not abrogate their powers.

2.5 No, because the very powers which will contain the autonomous States Act shall suffice.

Answers to Part III

Role of Governor

3.1 We feel that the conduct of the Governor should be brought under review by any Court Tribunal or body designated by the Legislature of the concerned State to bring him in par with the President whose conduct can be also brought under the review of the Court.

3.2 Governor should strictly work within the Constitutional frame.

3.3 We entirely agree with the performance/functions of the Governor under 356(1), 164 and 174(2). He only interprets the Constitution.

3.4 The purpose of the Constitution makers in providing in Art. 200 for reservation of Bills by Governor and in Art. 201 for the consideration of the President is only because if it became law it would derogate from the powers of the High Court as to endanger the position which that Court is by Constitution designed to fill.

3.5 The prerogatives by law instituted should be maintained.

3.6 Generally Governor is a link between the State and the Centre. They generally act impartially in accordance with the Constitution. But there have been instances where Governmor abrogated their impartiality. Take the case of Telugu Desam. People revolted against the partiality of the Governor and was sacked.

3.7 Yes, We entirely agree.

3.8 Yes. We entirely agree.

3.9. No. We are familiar with the working of the Federal Republic of Germay. Similar provisions should be incorporated in our Constitution.

3.10 We agree that guidelines on the manner in which discretionary powers should be exercised by the Governors be formulated by the Inter-State Council.

Answers to Part IV

4.1 The purpose, function and use of articles 256-257 and 265 in the scheme and frame work of our Constitution have to be continued in the Federal frame work. We have not yet come across any incident of any State which was threatened of being invoked by article 365. But, once the States are given autonomy, the framework will ,have to be changed because the Centre will have to take care of Defence, Communications & Foreign Affairs.

4.2 Since Art. 365 has never been invoked it may as well continue as a reserve provision. It is purely a consequential clause.

4.3 Art. 256/257 are necessitated to avoid conflicts, as such the recommendations of the Commission carry no much weightage. We all explore all the avenues at our disposal, failing which it comes into operation art. 256/257 and 365.

4.4 We have to be very explicit here and state that the Constitution makers with a remarkable foresight provided "a necessitas" in art. 256 for the use by the Union and in our considered opinion this remedial measure which was never exercised has to be preserved with all sanctity.

4.5 We have seen what has happened in Punjab & Assam. No one can say for how long President's rule should continue. In disturbed areas specially we have to be cautious and Parliament should be empowered to extend the time-limit if so requires. Art. 356 has not been misused if not for the disturbances created in a particular state.

4.6 No. Census and elections may be continued to be implemented by the State Administration. The present arrangements really work satisfactorily.

4.7 No state should allow the Union to make inroads into the States autonomy. Central agencies should be mere guiding factors.

4.8 We are of the firm view that All India Services have not fulfilled the expectations of the Constitution makers. In fact they have fulfilled the expectations of their own relatives and friends. Only State Service Commissions have done commendable job. All India Services should have representatives from each State to defend it own interests.

4.9 We are of the firm view that the Union is competent by virtue of Art. 355 to rush its aid to civil power in any State.

4.10 We share the views of the State that Broadcasting and Television facilities should be shared between the Union and the States as both have got equal for access to these mass communication media for putting across their views to the people.

4.11 Zero contribution. If it had collectively pursued the States interests, by this time Goa, Daman & Diu would be elevated to full fledged State.

4.12 Once the States are declared autonomous the question of Inter-State Council is redundant.

PART V

5.1 Yes, We entirely agree. Wherever the States are financially weak they should be aided. However, the States must and should procure to ameliorate their own resources. In case of Goa, Daman & Diu we will take care of it.

5.2 The alternatives and combinations suggested by the A.R.C. study team should continue. In fact without waiting for the Central aid, States can obtain loans from various financial institutions to complete their projects.

5.3 Give more powers (Financial) to States who will be able to govern their own life. It has been so till today.

5.4 To bridge the revenue gap, Centre for the time being should make good the deficit.

5.5 We would suggest that Finance Commission and Planning Commission be entrusted the task of evolving a formula to determine :

(a) the share of taxes

(b) plan assistance

(c) non-plan assistance.

5.6 A special federal fund is a must if faster development in economically underdeveloped areas is envisaged. Finance and Planning Commission should be taken into confidence.

5.7 We are of the view that Part XII of the Constitution ensuring "freedom of trade, commerce and intercourse" within the country is a must to avoid irregularities in the taxation system and thereby there will be competition in the trade and all will flourish.

5.8 We advocate separation between the imposition of such taxes and distribution of the tax proceeds. For the former we suggest Central levy of these taxes subject to control by a Council of Ministers and State Finance Ministers.

5.9 In fact it is needless to elaborate that the role of Planning Commission will be limited to functioning as an agency for overall investment planning and decision making in the interest of rational utilisation of scarce capital resources. In our view the Finance Commission should deal with all financial transfers (Plan & non-plan on an assessment of capital and revenue resources).

5.10 In reality the transfers, both statutory and discretionary, from the Union to the States, on the advice of successive Finance Commissions or otherwise, promoted efficiency and economy in expenditure on the one hand and narrowed down the disparities in public expenditure among the States, on the other.

5.11 Finance Commision should be asked to deal with this subject.

5.12 This broad proposition should be accepted in toto.

5.13 The principles laid down by the Seventh Finance Commission for grants-in-aid under art. 275 should be accepted.

5.14 We fully agree that all Central revenues be brought within the divisible pool of resources which in turn can distribute it under the grants-in-aid to the States who show deficit.

5.15 We do not agree that the savings should be shared in private sectors.

5.16 The States should procure means to finance their own projects and make it self sufficient and viable. They should borrow money from various financial institutions. Once a State is viable, deficit will disappear.

5.17 As stated above the only remedy we can suggest is that States should mobilise their own resources from all sources. In difficult cases of mountaineous regions the Centre should step in and help them overcome their burden.

5.18 Centre should not impose any restrictions on the freedem of States to borrow. Financial autonomy has to be respected.

5.19 Absolutely not. It is ridiculous to suggest that the Centre charges higher interest to the States than what it pays to the foreign lender. The present system of transferring foreign credit obtained for financing States Projects through the Centre to the States should continue without any hindrance. In fact foreign borrowings should be encouraged if the States are to prosper and projects get completed.

5.20 It is foolish to interfere with the working of Reserve Bank of India. It should be allowed to continue to coordinate the market borrowings not only of the Centre and the States but also of the private sector. There should be no Loans Council. Improvement of the functioning of Reserve Bank should be done by the Finance Commission.

5.21 Finance Commission should appreciate this aspect.

5.22 We have opined above that States should go all out to improve their resources. Beg, borrow or steal but complete all the projects from the finances from all financing institutions.

5.23 We again repeat that such aspects must be looked after by the Finance Commission.

5.24 We don't mind if the Union ascertains the views of the State Govts. before moving a Bill to levy or vary the rate structure or abolish any of the duties and taxes enumerated in art. 268 and 269.

5.25 Yes. We do agree that art. 269 should be better exploited to augment the resources.

5.26 We agree with the views expressed by the States. It is urged that this grant in lieu of the passenger fares tax should be revised and enhanced in proportion to the increase in the collection of railway fare.

5.27 The Union Territory of Goa alone collects fabulous taxes by way of Central revenue and what Union gives to the territory is negligible. We suggest a share in the buoyancy in Central taxes.

5.28 The present working arrangements should continue.

5.29 We entirely agree for the creation of only two All India Institutions, the National Loan Corporation and National Economic Council. As regards National Credit Council its role is played by the Reserve Bank of India.

5.30 Yes. We subscribe to the view point that the benefits go back largely to the people.

5.31 Yes. We agree to the view point suggested.

5.32 The present system should be continued. The Parliament and the Legislatures are the watch dogs.

5.33 The Comptroller and Auditor General is the proper agency to suggest ways and means for better efficiency of auditing.

5.34 Parliament is the proper forum to check the functions of the Comptroller and Auditor General. Criticism of Ashok Chanda has no relevance.

5.35 It is left for Parliament to suggest and implement ways and means for better functioning.

5.36 Yes. The views and suggestions made by the Comptroller and Auditor General are to be complied.

5.37 We agree to whatever suggestions made to improve the image of the administration.

5.38 Not necessary. It will create confusion which will be worse donfounded. Let us not interfere with the working of the Comptroller and Auditor General.

5.39 The check exercised by the Comptroller and Auditor General is sufficient.

PART VI

6.1 The suggestions made by the A.R.C. study team and other studies conducted by experts are to be observed carefully and implemented specially the shortcomings in planning relationship.

6.2 We fully support the suggestion.

6.3 We go by the Planning Commission. Some misunderstanding which is always there in all the committees can be sorted out.

6.4 The three views expressed on the composition of Planning Commission should be examined by experts appointed by the Prime Minister.

6.5 We fully support the suggestion.

6.6 Leave it to the Planning Commission. Do not interfere with their working.

6.7 Let us not discuss the merits and demerits of the present system of channelising Central assistance to the States. We feel that their working is satisfactory.

6.8 We agree with the present system. Let us not interfere to add confusion.

6.9 The criteria evolved by the National Development Council is satisfactory.The present system of allocating the Central assistance is also satisfactory. Special Central assistance for Tribal and Hill areas should continue.

6.10 Leave it to the Planning Commission to supervise it.

6.11 Let us continue with the present system.

6.12 At the moment we should not think of decentralising planning. Let the States suggest if they so desire.

6.13 No. Inspite of having Planning Boards in each State, the National Plan can never be less imperative. We agree that each state should have their own planning boards.

PART VII

7.1 Once decentralisation of powers take place in the States, it is the prerogative of the states to issue licences to any industry because industrialisation of States will bring prosperity—see the case of Punjab. Whenever Union's guidance is required by law it shall be observed.

7.2 Public interest is national interest. There cannot be national interest without public interest. Everything that is in public interest has necessarily to be in the national interest. It should be laid down by Parliament what industries should be controlled by the Union and what industries should come under the purview of the States.

7.3 Once Parliament lays down and define what industries should come under the purview of Centre and the States, automatically improving and decentralising the present procedures will come into being.

7.4 To fill the gap in technology states have to go all out to procure the technology as is being done now by P. M. Only then all deficiencies will disappear.

7.5 These financial institutions should be directed to go all out to finance every state plans and every industry because execution of States Plans and putting more industries will being prosperity and minimise unemployment.

7.6 States must be taken into confidence.

7.7 To make Central investment decisions more objective, states have to be taken into confidence.

7.8 We fully subscribe the methodology adopted to identify backward areas for provisions of various central fiscal and financial incentives for promotion of industries—Take the territory of Goa, Daman & Diu—It was neglected before liberation—After liberation within 25 years the progress made in stupendous.

8.1 In fact we do not subscribe to the view for appointment by Parliament by law of an authority for carrying out the purposes of arts. 301, 302, 303 and 304. There should be no restrictions on trade, commerce and inter-course among states. Only then India will prosper.

9.1 We subscribe to the view that Agriculture should be the State subject.

9.2 The States know their needs. Once agriculture is made the state subject, Centre's interference will end.

9.3 We have suggested that States should have their own Plans. We agree with the suggestion made by the National Commission on Agriculture (1976).

9.4 Once agriculture is made the State subject all anomalies will end.

9.5 They should be asked to go all out to help the States.

10.1 Autonomy will decentralise powers and only then the burden of Centre-State consultation will end.

10.2 Again, autonomy will solve all the problems, States must be made to decide their own affairs.

11.1 Centre's interference is not justified. Hence decentralisation of powers to the States.

11.2 University Grants Commission should not be interfere with the University Education—University is autonomous.

11.3 Education should be the State subject and all states must adopt uniform code for education.

11.4 The Constitutional provisions under art. 29 and 30 must be preserved with sanctity because India is secular—We see no interference.

11.5 No conflicts have been noticed.

12.1 The Advisory Committee is not required on the lines of USA.

UNITED GOANS PARTY

OUR CASE FOR STATEHOOD

When Goa, became free, Nehru was keen that Goa's identity must not be diluted or distortion of the Goan identity.

Goa deserves to be a full fledged state with Konkani as its official language. Goa has its own importance, historic and cultural. Goa's attitude towards life is very different from others. Goa is a charming land and a viable state in every respect. The conscept of Union Territory is outdated. The composition of Goa State should comprise Goa, Daman and Diu as it has been known to be with us for centuries. They want to continue to be with us in all respects including Goa University. At the famous Opinion Poll they overwhelmingly voted against the merger with Gujarat and opted to continue with us. Goa's socio-cultutal the demographic, the popular sentiments, the handicaps of Union Territorial States and the question of financial viability confidently concludes that there is sound justification on which the people of Goa, Daman and Diu have rested their demand for a full fledged state. The very document prepared by Goa Government is unequivocal in its affirmation of Goa's unique and homogeneous socio-cultural identity. The general way of life, food, habits, housing pattern, social and religious beliefs, etc. are all quite distinct and that even the socio-religious fairs and

festivals which are held all the year round even in the interior parts of the territory have independent cultural homogeneity of their own.

The social and cultural ties among the people are too strong to create any discord between the sections of population following different religious faiths. As a matter of fact, Goa, Daman and Diu is the only area in the country which can claim complete inter religious harmony. On the demographic front, states like Nagaland and Sikkim have smaller population and two other Manipur and Meghalaya are of comparable size. Goa has the highest density population (285 per sq. kilometre) The basic idea in presenting the demographic data is to bring out the fact that the people of this Territory are better educated and knowledgeable and their demand for statehood is not merely a result of blind mass following of political leadership. On the popular support for statehood we can cite examples of 1971-76 and 1983 when the Goa Assembly inspite of different compositions each time, it passed unanimous resolutions urging the Central Government to grant Statehood. It is unfortunate that so far no final decision has been taken on this very important issue and that the issue is emotionally loaded and any further delay will risk popular discontent. The handicaps Goa suffers as a consequence being Union Territory is due to the severe limitations of the Legislative Assembly. Its powers to enact laws on any of the subjects listed either in the State List or the concurrent list of the Eight Schedule of the Constitution is subject to the ever riding power of Parliament to make laws for the Union Territory on any of these subjects. This is a severe limitation. Legislatures of full fledged States do not have any such handicaps. Under Rule 56 of Rules of Business Union Territory of Goa, Daman & Diu, prior approval of the Government of India is necessary before introducing in the Legislative Assembly, Legislation on any of the subjects listed in the concurrent list or any of the subjects to which second proviso of section 25 of the Union Territory Act applies.

Experience has proved that this is a dilatory process and that often the very object of the proposed Legislation is defeated on account of the delay that takes place in is accepted to be a measure of relative economic prosperity between different areas. Goa, Daman and Diu claim rightly to have made considerable progress since Liberation as it ranks seceond to none but to U.T. of Delhi. The Territory of GDD recorded an average annual rate of growth of 7·2 percent over the last two years.

It is indeed pretty high compared to other states. The surprising low rate of growth in per capita income (3·5% p.a.) and it is due to fast growing population and it is due to the large influx of population from outside.

According to 1971 Census as much as 14% of the population was made up of immigrants. The rising trend of the territory's Revenue (tax or non-tax) is yet another proof of the growing economic prosperity. The total revenue in the year 1971-72 was 482 lakhs has now gone up to 3286 lakhs in 1984-85, thus recording the rise of 800% over a period of 13 years. The per capita tax revenue has also gone up from Rs. 56 to Rs. 276/- over the same period. The total non-tax revenue has gone up from Rs. 353 lakhs in 1971-72 to Rs. 2560 lakhs in 1984-85 showing growth of 625%. Goa has been making greater effort at resource mobilisation through taxes. In fact that the per capita tax revenue is the highest in Goa, Daman and Diu is indicative of the facts that this territory is among the most highly tax areas in the country. The responsibility of the Govt. of India bears on account of Goa, Daman and Diu is minimal and it would most likely not have to provide any more grants in aid than at present after it becomes a State. Govt. of India is collecting 150 crores approximately as revenue from Central Taxes and Duties in this territory. Goa's claim to bridge its small deficits is more than justified. The new State of Goa will be able to raise funds from the various financial institutions besides the Govt. of India to meet its development projects receiving the necessary approval from the Government of India. Even the various departments of Government have first to obtain clearance of the respective administrative Ministries of the Govt. of India to include proposals from the Planning Commission in so far as the Plan Scheme are concernde. Even after Scheme is included in the Budget and approved by the Legislative Assembly, the Govt. cannot execute it without the prior concurrence of the Govt. of India if the expenses involved exceed Rs. 50,00 lakhs.

Again there are many schemes especially in the fields of Agriculture, Animal Husbandry, Fisheries, Education and Social Welfare which involves an element of subsidy. Unlike in the case of full fledged states the U.T. Govt. has no powers to sanction such subsidy without prior approval of the concerned administrative Ministries as well as Finance Ministry. Obtaining approval leads to protected correspondence and the delay causes non-utilisation of subsidy due to late receipt or non-receipt of approval. *The limitation on raising finances* : The U.T. has no powers to guarantee loans to be raised from the market or other financial institutions though such powers are enjoyed by State Government. The Govt. of India has to stand guarantee for such loans on behalf of Union Territory.

Goa cannot raise loans from L.I.C., I.D.B.I., I.F.C. or other similar institutions and has to depend upon the Central Govt. for funding for capital intensive projects. This is a serious hindrance to rapid progress.

The trend of economic growth over a time period rather than the balance sheet on a fixed date is more relevant in assessing the financial viability and it can be measured in terms of the gross state domestic products, and the per capita income. The GSDP of this territory has 114 crores and the per capita income was Rs. 3694 both at current prices in 1982-83. The per capita income is accepted to be a measure of relative economic prosperity between different areas, Goa, Daman & Diu claim rightly to have made considerable progress since liberation as it ranks second to none but to the U.T. of Delhi. The Territory of GDD recorded an average annual rate of growth of 7·2 percent over the last two years.

It is indeed pretty high, compared to other States. The surprising low rate of growth in per capita income (3.5% p.a.) and it is due to fast growing population and it is due to the large influx of population from outside.

According to 1971 Census as much as 14% of the population was made up of immigrants. The rising trend of the territory's Revenue (tax or non-tax) is yet another proof of the growing economic prospertity. The total revenue in the year 1971-72 was 482 lakhs has now gone up to 3286 lakhs in 1984-85, thus recording the rise of 800% over a period of 13 years. The per capita tax revenue has also gone up from Rs. 56 to Rs. 276/- over the same period. The total non tax revenue has gone up from Rs. 353 lakhs in 1971-72 to Rs. 2560 lakhs in 1984-85 showing growth of 625%. Goa has been making greater effort at resource mobilisation through taxes. In fact that the per capita tax revenue is the highest in Goa, Daman and Diu is indicative of the facts that this territory is among the most highly tax areas in the country. The responsibility of Govt. of India bears on account of Goa, Daman and Diu is minimal and it could most likely not have to provide any more grants-in-aid than at present after it becomes a State. Govt. of India is collecting 150 crores approximately as revenue from Central Taxes and Duties in this territory. Goa's claim to bridge its small deficit is more than justified. The new State of Goa will be able to raise funds from the various financil institutions besides the Govt. of India to meet its development projects.

YUVA JANATA
(Goa Unit)

MEMORANDUM

Why Goa Should be A State?

I. We are the Youth Wing of the Janata Party and we have among our various objectives the following :

(1) Full fledged Statehood for Goa (2) Konkani as sole official language (3) Inclusion of Konkani in the Eighth Schedule of Indian Constitution (4) Greater autonomy for States within the framework of the Indian Constitution.

We are committed to fulfilling these objectives and hence we take this opportunity of presenting Goa's case before you. While we are aware of the fact that your Commission is set up to study centre state relations we feel that the case of statehood for Goa is closely related to your terms of reference and hence this representation. The various reasons why Goa should be given statehood are as follows.—

1. **Historical** : Goa's earliest reference can be found in the Mahabharat. Ever since its creation Goa has been ruled by invaders be it the rule of the Chalukyas, Yadavas, Vijayanagar and Bamani Kingdoms, Kadambas, Adil Shah and finally the Portuguese. The first signs of fulfilment of Goan peoples long standing aspirations *i.e.* right of self determination came with the liberation of this territory from 450 years of Portuguese Rule. However since 1961 the year of Goa's liberation this aspiration has not been fulfilled in so far as we continue to be a Union Territory controlled from Delhi. Had we to achieve the status of a State we could conduct our affairs directly as other States of the Indian Union do. This would give us a free hand in the administration of our territory.

2. **Opinion Poll** : Following closely in the heels of Goa's liberation came the historic Opinion Poll wherein the Goan people expressed their desire to remain a separate entity in the Indian Union. We rejected the move for merger with Maharashtra. The message was clear that Goans wanted to live within our present boundaries and do not want any additions to our territory. *In other words the Goans are opposed to the theories of either Vishal Gomantak or Poorna Gomantak*, which can best be described as back door efforts of Maharashtra to colonise Goa. As a result of the Opinion Poll we have remained as a Union Territory pending elevation to a State. We hope that your Honour will take note of the wishes of the people of Goa that we would like to be elevated to the *level of a State within our present boundaries only.*

3. **Reorganisation of States** : By the time Goa joined the Indian Union in 1961 the reorganisation of States on a linguistic basis had long been completed. Hence we did not get the opportunity of joining the Indian Union as a State inspite of the Opinion Poll. Our constant demand for statehood within our present boundaries has not been fulfilled despite promises to that effect by various Prime Ministers. This has led to a feeling of neglect and frustration. The delay in granting of statehood has hampered our efforts for a speedy development thereby slowing down the rate of progress. A new hope has set in with the appointment of your Commission as well as with the news that a Union Territory in the border area is likely to be elevated to a State. We hope your favourable recommendation will pave the way for Goa also attaining Statehood with the others.

4. **Uniqueness** : The social and cultural life of Goans is unique in itself and has come to be appreciated by all. The customs, food habits, dress, traditions, hospitality and life styles are unique and have continued to be handed down from generation to generation. This uniqueness awed our late Prime Minister Jawaharlal Nehru who was committed to maintaining and preserving this uniqueness. The only way this can be done is by granting statehood within our existing boundaries. Together with our scenic beauty and splendour Goa will be a gem of a State something which every Indian can be then be proud of.

5. **Communal Harmony** : The communal harmony that prevails in Goa is second to none and granting of statehood will make it a model for other States. The spirit of religious tolerance and sharing the joys of one anothers religous festivals is a milestone which will go a long way in helping the Central Govt. to achieve its goal of National Integration.

6. **Economically** : Today the per capita income of Goa is one of the highest in the country. The standard of living in villages is also high thus leaving no difference between the cities and villages. There is in fact no place that can be termed a village when compared to the rest of India. An average Goan has a house to live in and four square meals. Further economic studies show that should Goa be given statehood the percentage of dependence upon the Central Govt. for finances will be proportionately lesser than that of other States. With the attainment

of statehood the pace of development will hasten. This we are confident will make Goa a surplus State in the long run. Further there are certain Union Territories with lower standards of living and worse economic conditions that are likely to be given the status of States. This explodes the myth of the Economic Viability.

7. **Language** : The language of the Territory shall be Konkani since it is the language of the masses. Today the people converse in Konkani. The 1971 census showed that 64.81% of the people registered their mother tongue as Konkani. The 1981 Census has not been released and it is learnt that about 75% of the people have registered their mother tongue as Konkani. Foreign rulers tried to suppress the language for fear of losing control over the seat of power but they could not succeed. The language though stunted by the suppression of the foreign rulers got an impetus after liberation and developed at a rapid speed. The Sahitya Academy has recognised it as an independent literary language in 1975 and many goan writers have bagged the prestigous Sahitya Academy Awards for literary works in Konkani language.

8. **Second Grade Status :** Despite 25 years of our liberation Goa is without the status of Statehood and language. This makes Goans second grade citizens. The granting of Statehood will rectify this imbalance and restore the honour and dignity of Goan people and put them on part with other Indians as respected citizens of the Indian Union. This will further help the Goans to work harder and speed up economic development which will reflect in overall nation building efforts.

9. **Daman and Diu** : The Union Territories of Daman and Diu could be left as centrally administered territories with the elevation of Goa to a State. The Administrative expenses are exhorbitant keeping in view their distances from Goa. This has led to eye brows being raised by the Union Finance Ministry. Further apart from geographical distance the culture and languages are also equally distant from that of the Goans. Hence the need for separation.

10. **Manpower** : The requirement of manpower in case of Goa's attaining Statehood can be met with in view of the fact that we have almost all the professional institutions required for turning out skilled manpower. Any new streams can be started in view of Goa University coming into being with effect from this academic year.

To sum up we feel that all these various factors make up a strong case for Goa's Statehood. Statehood within Goa's present boundaries will fulfil the age old desire of self rule as reflected in the Opinion Poll. It will pave the way for total control over our affairs to vest in our hands. The uniqueness of Goa will be maintained and its example of Communal Harmony will be projected to the Nation. The social and cultural fabric of Goa will be strengthened and economically we are confident that Goa will survive the test. Statehood will restore the honour and dignity of Goans too.

We hope you will use your good offices in making out a strong case for Goa's Statehood in your recommendations to the Central Govt. This is the only opportunity at present for Goa getting Statehood in view of the Mizo accord and the setting up of your Commission. We Goans will highly appreciate your gesture of recommending Statehood for Goa within the present boundaries with Konkani as its Official Language.

After all what better gift other than Statehood within present boundaries could be presented to Goans on the occassion of Silver Jubilee of Goa's Liberation?

SHIROMANI AKALI DAL

Shiromani Akali Dal's case on the Centre-State relationship as envisaged in the historic Anandpur Sahib Resolution

The Shiromani Akali Dal has remained consistently in the fore-front of the national forces that have been seeking systemic changes in Indian policy—the kind of systemic changes that would on the one hand provide full avenues and opportunities of self-development to various communities and regions, and on the other hand ensure a stronger united India. From this angle the restructuration of the Centre-State relationship on the federal lines and the consequential decentralization of power is imperative if the national system is to realize the Directive Principles of State Policy in an effective way. A basic change in the organisation of political power is a must if the nation is to resolve the crises in which it finds itself today.

It is in this context that the real essence and significance of the historic Anandpur Sahib Resolution becomes manifest. A comprehensive policy programme—social, economic, political etc.—drafted by a sub committee was approved by the Working Committee of the Shiromani Akali Dal in October, 1973 at Sri Anandpur Sahib the political part of the programme related to the provincial autonomy in a federalized set up. This has come to be known as the Anandpur Sahib Resolution, which was envisaged to be referred to this Hon'ble Commission in the Rajiv-Longowal Accord on Punjab. The theological language of the resolution approved by the Working Committee in 1973 lends itself to correct interpretation only if it is understood in the context of the Sikh lore. The political part of the policy programme approved by the Dal's Working Committee in 1973 at Sri Anandpur Sahib was drafted into a political resolution on the autonomy of the States in federalized setup, and was passed by the 18th All India Akali Conference held at Ludhiana in 1978. It is the Ludhiana version of 1978 that was authenticated by Sant Harchand Singh Longowal as the essence of the Anandpur Sahib Resolution (copy annexed). As is clear from the text, it pleads for stronger States, for corporate identities of different communities, as much as for "National unity and the integrity of the Country".

It is pertinent to recapitulate here that the Congress Party right from its inception and throughout the struggle for national independence had been pleading for a federal set up for free India. The Congress leaders including Pt. Moti Lal Nehru, Mahatma Gandhi, Pt. Jawahar Lal Nehru, Maulana Abul Kalam Azad on different occasions had interpreted

Swaraj as connoting grass-roots power for the people with greater authority vesting with the Provinces. A few instances to substantiate this point would suffice here. The criticism of the Government of India Act, 1935 by the Congress Party was mainly on the ground that it did not bestow sufficient powers on the Provincial Governments in the political dispensation as laid down therein. This stand of the Congress Party was formalised at its 51st Session held at Haripura in 1938 when federal system with autonomous Provinces as its constituents was strongly reiterated. Further, Cabinet Mission Plan also provided that only three subjects would vest with the Central Government—these being Defence, Foreign Affairs and Communications. Apropos of the Cabinet Mission Congress Party had "suggested that the future framework of the Country's Constitution be based on a federal structure with a limited number of compulsory central subjects such as defence, communications and foreign affairs; the federation would consist of autonomous Provinces in which would vest the residuary subjects". The Congress also suggested that there should be a list of "optional subject" in respect of which any Province or group of Provinces would be free to accept federal executive and legislative jurisdiction. It was proposed that on the completion of the constitution making process a Province could elect to stand out of Constitution altogether, or federate on the essential minimum subjects or federate on the essential as well as the optional subjects. ('Framing of India's Constitution', Editor B. Shiva Rao, Indian Institute of Public Administration, 1968 Page 65). It was in terms of this Cabinet Mission Plan that the Constituent Assembly came into existence with approval thereof by the Congress Party. In this context, it would be relevant to quote the views of Maulana Abul Kalam Azad who held extensive negotiations with the members of the Cabient Mission as representative of the Congress Party.

"I gave continuous and anxious thought to this subject. All over the world, the tendency was for the decentralisation of power. In a country so vast as India and with people so diverse in language, customs and geographical conditions, a unitary Government was obviously most unsuitable. Decentralisation of power in a federal Government would also help to allay the fears of the minorities. Ultimately, I came to the conclusion that the Constitution of India must from the nature of the case, be federal. Further, it must be so framed as to ensure autonomy to the Provinces in as many subjects as possible. We had to reconcile the claims of provincial autonomy with national unity. This could be done by finding a satisfactory formula for the distribution of power and functions between the Central and the Provincial Governments. Some powers and functions would be essentially central, others essentially provincial and some which could be either, provincially or centrally exercised by consent. The first step was to devise a formula by which a minimum number of subjects should be declared as essentially the responsibility of the Central Government. These must belong to the Union Government compulsorily. In addition, there should be a list of subjects which could be dealt with centrally if the provinces so desired. This might be called the optional list for the Central Government and any province which so wished could delegate its powers in respect of all or any of these subjects to the Central Government. ("India Wins Freedom" by Maulana Abul Kalam Azad; Orient Longmans; M.D.P.P. 140"). Maulana Azad further observes that "I have already mentioned that the Cabinet Mission published its scheme on 16th May. Basically, it was the same as the one sketched in my statement of 15 April. The Cabinet Mission Plan provided that only three subjects would belong compulsarily to the Central Government. These were Defence, Foreign Affairs and Communications, which I had suggested in my scheme".....149 *ibid.*

When on an appeal made by the Congress Party through a resolution the Sikh representatives of the Shiromani Akali Dal joined the Constituent Assembly it was on the basis of the Congress assurance that all avenues and opportunities would be provided to the Sikhs as a minority for their sef-development in a federal set up. The Akali Dal continued its crusade for realisations of the assurances given to them in the Constituent Assembly. When ultimately the pledges given to the Sikhs and other minorities by the Congress leadership were not redeemed while framing and adopting the Constitution, the representatives of the Shiromani Akali Dal declined to append their signatures to the Constitution of India to register their protest. This change of attitude becomes all the more conspicuous when one realises that Pt. Jawahar Lal Nehru while moving the objectives Resolution in the Constituent Assembly of India on Dec. 13, 1946, had said that various territories constituting independent India "shall possess and retain the status of autonomous units together with residuary power.....". Further the Congress Party manifesto for Central Legislative Assembly election in October, 1945, as drafted by Pt. Nehru declared as under :—

"The Congress has stood for the unity of all communities and religious groups in India and for tolerance and goodwill between them. It has stood also for the right of the Indian people as a whole to have full opportunities for growth and self-development according to their wishes and the genius of the nation; it has stood also for the freedom of each group and territorial area within the nation to develop its own life and culture within the larger framework. For those who suffer from social tyranny and injustice, it had stood for the removal of all barriers to equality and special help from the State and society in order to raise them from their backward and depressed state.

The Congress has envisaged a free, democratic State with the fundamental rights and civil liberties of all the citizens guaranteed in the Constitution. This Constitution, in its view should be federal one with a great deal of autonomy for its constituent units".

The Anandpur Sahib resolution which pleads for really autonomous States characterized by decentralisation of power, with the Centre retaining the federal functions in respect of Defence, Foreign Affairs, Communications & Railways and Currency, is in consonance with what Pt. Nehru had been urging for

before 1947. The Anandpur Sahib resolution is in a sense, a plea for fulfilling even at this belated stage the assurance given by Pt. Nehru and other national leaders of the independence struggle to the Sikhs and other minorities that they would be in their corporate being co-sharers in the political sovereignty of free India and that they would have full opportunities for preserving their identity as well as all avenues for autonomous self-development.

By way of elaboration and concretization of its Anandpur Sahib resolution, the Shiromani Akali Dal proposes *inter alia* the following definitive measures—

1. The Preamble to the Constitution should be amended so as to incorporate the expression "federal" to characterize the Republic of India as such. This is essential to underline that the Indian system is basically of federal nature; this would halt the gradual drift towards unitarian set-up.

2. There should be re-distribution of subjects among the Union List, the Concurrent List and the State List on the basis of federal principles, as sought by Shiromani Akali Dal in the Anandpur Sahib Resolution.

3. The residual powers should vest with the States.

4. The Centre should not have the power or competence to destroy or dilute the ethnic, cultural and linguistic self-identity of a federating, constituent unit.

5. The members of the Rajya Sabha should be elected on the principle of equality of the States as autonomous units with equal representation. In other words the Rajya Sabha should become representative of the States. The diversity of nationalities and religious, linguistic, cultural and ethnic minorities should be adequately reflected in the composition of Rajya Sabha.

6. While restricting the imposition of emergency only in the event of exceptional circumstances, (foreign aggression) it should be constitutionally ensured that during the proclamation of Emergency the federal set-up remains intact.

7. The legislature of a State should have exclusive power and competence to legislate over matters given in the re-drawn State List.

8. Executive power in respect of matters included in the Concurrent List, irrespective of the fact as to whether legislation is by the Centre or by the State, should vest with the States.

9. The institution of Governor, his powers, functions and duties should be brought in line with a federal polity so that the Governor does not remain an executive agent of the Centre but becomes a truly constitutional Head of the State.

10. Constitutional provisions which empower the Centre to dissolve a State Government and/or its assembly should have no place in a federal framework. In the event of constitutional break-down in a State, there should be a provision for immediate holding of elections and installation of a new democratic Government. If there is no provision for the President to take over the Central Government in the event of failure of constitutional processes, then, there is no justification for the Presidential powers when a similar contingency arises in a State.

11. The taxing powers should be federalised; the Union taxes/duties should be demarcated from the States' domain of taxation. Apart from statutory share in the Union Revenues, the State should have the exclusive power to levy, collect and retain the taxes/duties within their own sphere. For the purpose of uniformity of taxation in the States, the Centre may issue guidelines from time to time. Income tax should be provincialised; though it may be levied by the Centre for the sake for uniformity, the collection should be by and through the State Agencies.

The Finance Commission should be reactivated to discharge its constitutional duties, thus dispensing with the extraneous role of the Planning Commission which has not only imposed centralized planning but also made the States dependent on the discretionary funds provided by the Centre.

12. The present pattern of centralized planning should be decentralized and democratized enabling the States to draft their respective plans according to their own needs, imperatives and priorities. To ensure participation of the masses in the planning process, its decentralization is a "must".

13. To ensure executive autonomy of the State, it is essential that the vast directive powers vesting with the Centre should be dropped so that the States do not remain subservient to the Central Executive; in place of the directive powers there should be provision for coordination and consultative machinery among the States as also between the Union and the States.

14. The field of All India (federal) Services should be demarcated from the field of the St te Executive machinery. The executive machinery in the State should be under the direct control and discipline of the State Government itself.

The imperatives of pluralistic society of India characterised by the Nehru concept of unity in diversity demands a truly federalised set up which is essential for ethno-political development of the minorities as also for the growth of the grass-roots democracy which alone would ensure strong, prosperous and united India.

ANNEXURE

ANANDPUR SAHIB RESOLUTION.

Extract from the chapter on political goal as adopted by the working Committee of the Shiromani Akali Dal in its meeting held on 16-17 October, 1973 at Shri Anand Pur Sahib, which deals with the restructuring of the Constitution

Para 1(b): In this new Punjab and in other States, the Centre's interference would be restricted to Defence, Foreign relations, currency and general communications; all other departments would be in the jurisdiction of Punjab (and other States) which would be fully entitled to frame own Laws on these Subjects for administration. For the above departments of the Centre, Punjab and other States contribute in proportion to representation in the Parliament.

This was reiterated in the form of resolution No. 1 in the open session of 18th All India Akali Conference held at Ludhiana on 28-29 Oct., 1978:—

"Moved by S. Gurcharan Singh Tohra, President, Shiromani Gurdwara Prabandhak Committee and endorsed by S. Parkash Singh Badal, Chief Minister, Punjab. The Shiromani Akali Dal realises that India is a federal and republican geographical entity of different languages, religions and cultures. To safeguard the fundamental rights of the religious and linguistic minorities, to fulfill the demands of the democratic traditions and to pave the way for economic progress, it has become imperative that the Indian constitutional infra-structure should be given a real federal shape by redefining the Central and State relations and rights on the lines of the afore-said principle and objectives.

The concept of total revolution given by Lok Nayak Shri Jaya Pr kash Narain is also based upon the progressive decentralisation. The process of centralisation of powers of the States through repeated amendments of the Constitution during the Congress regime came before the country men in the form of the Emergency, when all fundamental rights of all citizens were usurped. It was then that the programme of decentralisation of powers ever advocated by Shiromani Akali Dal was openly accepted and adopted by other political parties including Janta Party, C.P.I.(M), A.D.M.K. etc.

Shiromani Akali Dal has ever stood firm on this principle and that is why after very careful consideration, it unanimously adopted a resolution to this effect first at All India Akali Conference, Batala then at Sri Anandpur Sahib which has endorsed the principle of State autonomy in keeping with the concept of federalism.

As such, the Shiromani Akali Dal emphatically urges upon the Janta Government to take cognizance of the different linguistic and cultural sections, religious minorities as also the voice of millions of a people and recast the constitutional structure of the country on real and meaningful federal principles to obviate the possibility of any danger to National unity and the integrity of the Country and further to enable the States to play a useful role for the progress and prosperity of Indian people in their respective areas by the meaningful exercise of their powers".

Supplement to the Memorandum of Shiromani Akali Dal

The Resolution of October, 1973 contained in para 1(b) passed by the Working Committee of the Akali Dal at Anandpur Sahib should not be interpreted in isolation from that part of the Resolution which is contained in paragraph 2. It should be read together with para 2 as well as its reiteration in the form of broad resolution No. 1 at the All-India Akali Conference held at Ludhiana in 1978. So interpreted it would be clear that the Anandpur Sahib Resolution is indicative of the broad principles on which the Akali Dal's substantive demand for having the Indian Constitution recast on real federal principles rests. The Anandpur Sahib Resolution does not say that the Centre should have no financial resources of its own. It will be incorrect to interpret the Resolution of 1973 in isolation with its para 2 and its reiteration at Ludhiana in 1978 as Resolution No. 1 and spell out a proposition that the Centre should have no financial resources whatsoever of its own. The Resolution in fact intends to emphasise that larger resources should vest with the States in view of their larger and increasing developmental responsibilities and that the balance in dividing the financial and fiscal power between the Centre and the States should lean in favour of the States. If due to increase in expenditure on Defence or on other Departments entrusted to the Centre, more funds are required by the Centre, the States should contribute the same. The system of financial contribution by the Provinces to the Central Government was not unknown in India. The Finance Enquiry Committee set up by the Constituent Assembly in October, 1948, under the Chairmanship of Shri V.T. Krishnamachari recommended such Contributions. Accordingly, the States of Pepsu, Rajasthan and Madhya Bharat were required to make contributions to the Centre for the transition period extending over several years.

The initial refusal of Central Government—as disclosed in the published White Paper—to refer the Anandpur Sahib Resolution to this Commission, was based on a misunderstanding of this Resolution. Its true meaning and inst nt was made clear by late Sant Longowal in the Punjab Memorandum of Settlement that it was a demand for restructuring the Constitution and Centre-State Relations in a manner which brings out its true federal principles and guarantees more autonomy to the States. The Memorandum submitted by our party i.e. Akali Dal (L) concretises that demand, and the memorandum submitted by the Akali Dal Government to the Commission, further spells out in detail the demand for restructuring of Centre-State Relations on true federal principles in accordance with the spirit of Anandpur Sahib Resolution, the essence of which was reiterated in Resolution No. 1 passed by All-India Akali Conference at Ludhiana in October, 1978.

GOVERNMENT OF PUNJAB

MEMORANDUM

MEMORANDUM

States as the Homelands of distinct peoples

1.1 The second half of the 19th Century was marked by growing anti-imperialist and anti-feudal sentiments in India. This became the basis of a widening and deepening patriotic unity of the country's diverse peoples in opposition to British rule. At the same time, there was also among a growing number of distinct peoples, each sharing a common language and forming a majority in a relatively large contiguous area, a growing urge to come together in unified territorial units. Prior to British rule, even though regional languages had existed for centuries and some of them had long back grown into literary languages, the sense of distinct identity based on community of langauge and urge for a separate compact territorial unit was not very noticeable except perhaps in the deep south and Bengal. The concept of nation-states had generally not yet percolated to this part of the world. For example, as late as the first half of the nineteenth century under Maharaja Ranjit Singh, the official language of the Lahore Durbar was Persian and not Punjabi in Gurmukhi script, and his domain was anything but a nation-state. Much of the scholarly literature produced in this period was in Persian.

Growing Urge among Distinct Peoples for Territorial Consolidation

1.2 During and after the second half of the nineteenth century, a sense of distinct identity and an urge for a separate compact territorial unit had begun to take root and grow among several linguistic groups, more so if they also shared a common culture. The factors that contributed to this trend included : adoption, under British rule, of local languages as a medium of instruction in schools so that people instructed in a common medium began to look upon themselves as a single entity, distinct from people using a different medium; the availability of newspapers, literature and other reading materials and rise of regional intelligentsia in Indian languages; concepts and modes of thought imported from Western Europe, where the nation-state had become the predominant form of State organisation; the fact that several Indian languages were spoken by much larger numbers than the total population of several nation-states of Europe, and that those speaking a common language generally lived in compact geographical area; the perception by the emerging middle class of small manufacturers, traders and professionals of different linguistic groups that distinct territorial units of the particular group could serve as a powerful defensive mechanism against the unequal competition and dominance by the more advanced middle class elements from other linguistic groups; the organisation by the Indian National Congress of its regional bodies generally on linguistic basis so as to facilitate greater access to the masses; and growth and politicisation of the popular literatrue in different regional languages under the impact of the freedom movement and the mass awakening associated with it.

1.3 The progress among the different linguistic and cultural groups in acquiring sense of distinct identity was uneven over the different parts of the country. The progress was slower among people where religious, cultural, caste, etc. differences cut across the identity of language, or the language was not developed enough for widespread use as a medium of instruction or communication, or for various considerations a language other than the mother tongue was adopted by a large section or even a majority of the people as a medium of school instruction, or where more than one script was used for the same language. The sense of distinct identity was most advanced among the Bengali, Marathi, Tamil, Telugu, Malyalam, Kannada, Gujarati and Kashmiri speaking peoples among the present Indian population, and among the Sindhi and the Peshtu speaking people in the present Pakistan population. This "legitimised the principle of reorganisation of the Indian provinces on a linguistic basis."*

1.4 How far the sense of distinct identity had advanced among the Bengali Hindus was brought home to all by the violent protests touched off by the Partition of Bengal in 1905. As a result, the British rulers were obliged to reunite Bengal into a single province. At that time, no one interpreted the violent protest as an anti-national movement, which distracted from the freedom struggle. Indeed the Partition of Bengal was considered as a British move to split and divide the freedom struggle and the reversal of this decision was adjudged a great victory not only of the Bengali people but also of the national freedom movement.

Emergence of Multi-National Society

1.5 The growth of a distinct sense of identity among different linguistic-cultural territorial groups has continued in India in the 20th century particularly since Independence when several new favourable factors appeared. These were : abolition of princely States which opened the way for unification of people speaking a particular Indian language into a single state; further politicisation of popular literature under the impact of the competitive politics of a political democracy based on universal suffrage; and accelerated spread of literacy and of newspapers, journal and other popular literature in Indian languages. By now several of these groups have each acquired the characteristics of a distinct nationality. This process has necessarily shown uneven development. The difference of religion, caste, level of development. etc. have not been an equally potent factor cutting across the emerging sense of distinct nationality among different linguistic groups.

*Misra, K. K. "Linguistic Nationalities in India," in Kurian, K. Mathew and Varghese, P.N., ed. Centre-State Relations, Macmillan, 1981, p. 44.

Nevertheless, Indian Society has increasingly acquired a multi-national profile. The same has been happening in the part of the country which broke away in 1947 to form Pakistan. Even though the overwhelming majority of the population of each constituent part of Pakistan shared a common religion, Islam, which admittedly provides a much more powerful common bond among its believers than most other religions do, the distinct sense of nationality among thse parts has continued to grow and assert. The Bengali speaking people of East Pakistan broke away in 1971 to form a separate state of Bangladesh. The sense of distinct nationality is now very poswerful also among the major linguistic groups of the present day Pakistan, namely the Sindhis, the Pakhtoons, the Baluchis and the Punjabis.

1.6 There is, however, an important difference between the two countries. In Pakistan, Punjabis have emerged as the dominant nationality. In India no such dominant and exploitative majority has yet arisen. But such a development seems to be only a question of time. Powerful social forces in India are working for a highly centralised unitary State under their own domination. These include, firstly, the supra-national big business who are determined to exploit India as one vast unified and thoroughly integrated market. There is, secondly, the powerful administrative elite of All India Services. They are determined to keep a tight grip over the administration of the country and very much desire to keep to the minimum the State Government's control over them. Thirdly, there are zealous Hindus-Hindi-Hind chauvinists who want to impose their religious, linguistic and political domination over the whole country, riding rough shod over the urges and aspirations of the emerging distinct nationalities as well as of the long existing ethnic, religious and cultural minorities. These hegemonistic social forces are already coming together and are likely to do more so in the future. The Hindi-speaking people who are by far the most numerous linguistic group in India, are the obvious emerging nationality which these anti-democratic forces must base themselves on. This seems to be the most likely perspective today.

1.7 After Independence, the sense of distinct identity of different linguistic groups and their urge for territorial consolidation continued to grow even more vigorously than it had done earlier. Under the pressure of the various linguistic-cultural groups, within three years of the commencement of the Constitution, the process of reorganisation of States on a linguistic basis was initiated. The Andhra State Act, 1953 carved out the Telugu speaking areas of the erstwhile Madras State into a separate Andhra State. Three years later, the States Reorganisation Act, 1956 reorganised the four southern States on a linguistic basis. The States of Rajasthan and Madhya Pradesh were also organised as Hindi-speaking States. The failure in 1956 to split the Bombay State into separate States of Maharashtra and Gujarat by a principled application of the linguistic criterion had to be rectified in 1960. The Bombay Reorganisation Act, 1960 created the States of Maharashtra and Gujarat on a linguistic basis. Likewise, the failure to apply the linguistic criterion to Punjab in 1956 was partially rectified in 1966. The Punjab Re-organisation Act, 1966 carved out of Punjab, Haryana as a separate Hindi-speaking State and Chandigarh as a Union Territory, and transferred extensive hill and sub-mountain areas of the State to the adjoining Himachal Pradesh. The grudging, half-hearted and far from principled application of the linguistic criterion to the reorganisation of Punjab has been the source of immense trouble in this part of the country. In the absence of a principled application of the linguistic criterion to the determination of the Punjab State's boundaries, taking contiguity and linguistic affinity with a Village as a unit as the basis, this trouble has little chances of being brought to a final end. In the North-East, Nagaland and Meghalaya were carved out of Assam in 1962 and 1971, respectively. In their case, the basis of creation was ethnic rather than linguistic.

1.8 With the reorganisation of the States on a linguistic basis, these are no longer more administrative sub-divisions of the country with their boundaries for the most part a historical legacy. These are now deliberately reorganised homelands of different linguistic-cultural groups. These groups are, in fact, growing into distinct nationalities, though the pace and level of development of this process, varies. This is a very healthy development provided it is handled correctly. Nationality is a secular concept. It embraces all people speaking a given language irrespective of their religion, caste and beliefs, indeed, all those who share the sense of common and distinct identity. It excludes only such of them who, though they share the common language of the group, do not yet share a sense of distinct identity related to the community of language. As they come to acquire the sense of distinct identity common to the rest of the particular linguistic group, they will also become an integral part of this nationality.

1.9 The growth of a multi-national society in India, which seems to be an irreversible historical process, need not alarm any one. This by itself poses no threat to the unity and integrity of the country. A multi-national society does not necessarily imply so many independent States. Several States in the world such as Switzerland, Yugoslavia, Soviet Union, China and Canada have within their borders a number of distinct nationalities. There are two basic alternative ways in which a multi-national society is contained within a single State. One is to have a genuinely federal form of Government where the federal level takes care of the common interests and aspirations of the united nationalities while the autonomous federating units cater to their distinct interests and urges. The other alternative is for the dominant nationality to oppress and assimilate the minority nationalities so as to smother their distinct character, urges and aspirations. In this case, unless the minority nationalities are much fewer in number at all points of time then the dominant nationality and the assimilation process can go on uninterrupted for decades, or even centuries, the States following the second alternative usually degenarate into a prison-house of nationalities and peoples, and under the stresses and strains thus generated, have a strong tendency to disintegrate. India, in keeping with the basic urges and aspirations of its peoples, must avoid this course and instead opt for the alternative of a genuine federal state structure. It may then be possible to ensure that the unity and integrity of the country rests on the rock-like solid

foundation of the will for it of the united Indian peoples. This Memorandum has been informed and inspired by this perspective.

The Constitution in Retrospect and Prospect

2.1 The Colonial Administration had a unitary character. This enabled the British Government to have a tight grip over the entire Indian Administration through the Governor-General who was the supreme boss of this administration. However, in the early years of this Century, the concept of a federal state structure came to be discussed. This concept was mooted not as a device to ensure that alongside fulfilment of the patriotic and other collective urges of the diverse peoples of this country, who had awakened also to a sense of distinct linguistic-cultural identity, there will be adequate satisfaction of their particular and specific aspirations. Instead, it arose in an attempt to reconcile the Muslim minority, who had become increasingly assertive at that time after the formation of the Muslim League, to the goal of a united free India.

(1) Evolution of the Federal Concept

2.2 When the freedom movement raised the demand for Swaraj, the British had sought to counter it with the argument that India was not a nation but a geographical expression and a conglomeration of castes, communities, tribes and linguistic groups. Withdrawal of British power, they had alleged, would touch off an endless strife among these groups and cause a brake up of India. The leaders of the freedom movement sought to rebut this insinuation by pointing out to the Maurya Gupta and Moughul empires as a proof that independent India could be united and strong. Thus the concept of free India in their mind was that of a united and a highly centralised India. The muslims, being a minority community, had their apprehensions about this concept. They thought that this would inevitably mean a Hindu-dominated India. Since they were in majority in some provinces and Princely States, they thought that they could minimise this danger by demanding a federal structure with a large measure of autonomy to the provinces. Such a structure, they expected, would enable them to dominate substantial parts of the country as well as to enjoy a subtantial influence at the Centre.

2.3 The Congress leaders, in their anxiety to draw the Muslims into the struggle against ene British conceded the federal concept. The Lucknow Pact (1916). Between the Congress and the League and all subsequent negotiations between the two over the next three decades, were based on this concept. However, there was always a marked difference of approach between the two sides in regard to the interpretation of this concept. While the Congress favoured maximum powers, including residuary powers, for the Centre, the League always fought for the largest measure of autonomy, including residuary powers, for the provinces.

2.4 When, in the late 1920s, the idea was mooted that at some stage the Princely States too would need to be brought into association with the rest of the country, the federal concept appeared as the obvious arrangement. The Simon Commission (1927-29) and the Butler Committee (1927-30) both visualised an eventual federal union for the whole of India. At the Round-Table Conference, London (1930-32), the delegates of both British India and Princely States unanimously endorsed the federal idea. The federal structure was formally accepted in the Government of India Act, 1935.

2.5 While the Act of 1935 came into force with regard to British India with effect from 1937, the Federation envisaged by it never materialised. It was to be effective only after the Indian rulers, representing atleast half of the population of Indian States, had agreed to accede to it. The negotiations towards persuading them to do so were interrupted by the outbreak of World War II (August, 1939) and soon after all preprations for the Federation were suspended. Even though the provisions of the Act in respect of the setting up of the Federation proved infructuous, the Act did influence the constitutional structure of independent India. The Constituent Assembly, which framed the Indian Constitution, substantially drew on the concepts and the provisions of the 1935 Act.

2.6 The (British) Cabinet Mission Plan, on the basis of which the Constituent Assembly was set up in 1946, provided for the following :—

(i) The Brtish Indian provinces and the Princely States would together constitute a Union of India.

(ii) The jurisdiction of the Union would be limited to Foreign Affairs, Defence and Communications and it will have the power to raise finances for the discharge of these functions.

(iii) All subjects other than Union subjects will be within the jurisdiction of provinces. They will also be vested with residuary powers.

(iv) The princely States will retain all subjects and powers other than those ceded to the Union.

2.7 In accordance with the above plan, in December, 1946, Mr. Nehru introduced in the Constituent Assembly a resolution which "envisaged a Republic of India wherein the various territories would possess and retain the status of autonomous units together with residuary powers, and exercise all powers and functions of Government and administration save and except such powers and functions as were vested in or assigned to the Union or as where inherent or implied in the Union or resulted therefrom".

2.8 There was a fundamental change in the situation following the British Government's announcement of 3rd June, 1947, at the demand of the Muslim League and with the active connivance of the British and the acquiescence of the Indian National Congress, regarding the decision to partition the country. There was immediately a strong swing in the Constituent Assembly in favour of a powerful Union and a strong Centre. Apart from the Partition and the bloody and distressing events that accompanied it, several other factors contributed to this change, namely: (i) the alleged inherent tendency to disintegrate in the Indian polity throughout history, (ii) the daunting problems inherited on independence, aggravated by the Partition, (ii) the Pakistan organised tribal incursions into Kashmir the resulting Indo-Pak hostility and the Western pressures on India in this connection, (iv) the problems and apprehensions connected with the integration of the Princely States into the

Indian polity, and (v) the upper-Class interest, the chauvinistic pre-dilections, the indifference to the urges and aspirations of the ethnic, linguistic, religious and cultural minorities, and failure to appreciate the significance of emergence of a growing sense of distinct identity among linguistic-cultural groups among the dominent majority of the Constituent Assembly.

2.9 The fact that at that time constituent parts of the Indian Union in most cases had no distinct and exclusive linguistic identity or individuality also strenthened the same trend.

2.10 In this background, the Constitution, framed by the Constituent Assembly and enforced with effect from 26th January, 1950, provided for alongside the basic federal structure of the State, several important unitary features. Indeed the word federation or federal does not occur any where in the Constitution. Instead, the Republic is described as a Union of States. Dr. Ambedkar had explained (November, 1948) that the word Union had been used deliberately to make it clear that the constituent parts would have no right to secede.

2.11 During the 36 years since the enforcement of the Constitution, the Indian polity has experienced two antagonistic developments. On the one hand, as described in the previous Chapter, under pressure from the concerned linguistic-cultural groups, several States were organised on a linguistic basis. As a result of this reorganisation, states have acquired a distinct identity and individuality and, with passing years, have become increasingly conscious of it. On the other hand, the Centre has been encroaching on the powers and functions of the States and has tried relentlessly to reduce the latter to subservience and complete dependence upon itself. The original unitary features of the Constitution, and the magnification of these over the past 30 years, in the context of increasing self-consciousness of their distinct identity and individuality by the various linguistic-cultural groups and the States dominated by them, lies at the root of the present controversies and bitterness with regard to Centre-State relations.

(2) Character of the Constitution

2.12 The most important question raised with regard to the character of the Constitution is : Is it at all federal Constitution? This question may be answered by (a) identifying the essential characteristics of a federal constitution, and (b) examining how far the Indian Constitution shows these characteristics.

2.13 The essential characteristics of the federal constitution are: (i) There is the supremacy of the Constitution, (ii) The division of sovereign powers between the national and regional levels of government is defined in the Constitution itself and is unalterable except by an amendment of the Constitution by a special procedure. This implies that the central and regional levels of Government exercise within their respective spheres an independent and coordinate, and not a delegated, authority, (iii) The Constitution is interpreted by the Judiciary.

2.14 The Indian Constitution meets conditions (i) and (iii), but condition (ii) is met substantially but not wholly. The Constitution makers in the circumstances prevailing at the time opted for a "Federation with a strong Centre". Towards this and, while designing a federal structure of government for the country, they vested the Union with certain powers and Control over the States which introduced elements of a unitary structure. These had the effect of somewhat whittling down the federal character of the Constitution even in normal times. On proclamation of Emergency by the President (read: Union Executive), the Constitution gets transformed into a largely unitary dispensation.

2.15 The Unitary features of the Constitution include :

(i) the Parliament's power to alter areas and boundaries of States; (ii) the constraints on the States' Legislative autonomy; (iii) the discretionary powers of the Governor; (iv) the constraints on States' administrative autonomy; and (v) the Centre-State financial imbalance inherent in the Constitution's financial provisions.

Parliament's Power to Alter Areas and Boundaries of States

2.16 Under Article 3 of the Constitution, the Parliament may alter, through the ordinary legislative procedure, the area or boundaries of States even without their concurrence. It is necessary to make a reference to the State legislatures concerned, but it is not necessary to secure their consent. The power to diminish the area of any State includes the power to carve out a Union Territory out of the territory of a State. Chandigarh was in fact carved out a Union Territory out of the territory of erstwhile Punjab. This implies that, if the Union so wills, a State can be reduced to a mere dot on the map of India, by turning the rest of its area into one or more Union Territories. The same treatment, presumably can be meted out to all the States so that the country even in peace time can be put under a unitary structure of Government with the exception of dots on the map to which the States may be reduced. However, even in this case, States as a level of Government shall still survive as these cannot be altogether wiped out as a category except by an amendment of the Constitution that changes its very character.

2.17 The powers conferred on Parliament under Article 3 will be normally regarded as inconsistent with the federal principle. But these powers were fully justified at the time when the Constitution was framed and put into effect. India was then a jumble of territories comprising erstwhile British Indian Provinces and Princely States. The name, territory, boundary and linguistic composition of the population of these territories was, in most cases, a product of history rather than of a sound underlying principle. The consolidation of the unity and integrity of the newly emerged Republic and creation of essential political and administrative prerequisites for the country's accelerated economic, social and cultural progress made it imperative to redraw the internal map of India at the level of States on the basis of a sound principle. It would have been impossible to do this in an orderly way and within a reasonable period except by vesting the Parliament with power to do this by an ordinary law, after obtaining the views of the legislature of the State, the area, boundary or name of which would be affected by the proposed bill, but not necessarily with

the concurrence of that State. Article 3 vested must this power with the Parliament. The fact that in the period since 1950 as many as 19 Acts have had to be enacted by Parliament on the subject of re-organisation, re-naming and re-determining the status of States, shows that there was ample justification in late 1940s for vesting the Parliament with this power. The 19 Acts are listed below :

1. The Assam (Alteration of Boundaries) Act, 1951.
2. The Andhra State Act, 1953.
3. The Chandernagore (Merger) Act, 1954.
4. The States Reorganisation Act, 1956.
5. The Bihar and West Bengal (Transfer of Territories) Act, 1956.
6. The Rajasthan and Madhya Pradesh (Transfer of Territories) Act, 1959.
7. The Andhra Pradesh and Madras (Alteration of Boundaries) Act, 1959.
8. The Bombay Reorganisation Act, 1960.
9. The Acquired Territories (Merger) Act, 1960.
10. The State of Nagaland Act, 1962.
11. The Punjab Reorganisation Act, 1966.
12. The Andhra Pradesh and Mysore (Transfer of Territories) Act, 1968.
13. The Madras State (Alteration of Name) Act, 1968.
14. The Bihar and Uttar Pradesh (Alteration of Boundaries) Act, 1968.
15. The State of Himachal Pradesh Act, 1970.
16. The North-Eastern Areas (Reorganisation) Act, 1971.
17. The Mysore State (Alteration of Name) Act, 1973.
18. The Laccadive, Minicoy and Amindivi Islands (Alteration of Name) Act, 1973.
19. The Haryana and U.P. (Alteration of Boundaries) Act, 1979.

2.18 The justification for vesting with Parliament the power to legislate with regard to name, territory, and boundary of States, if necessary even without the concurrence of the States affected, will disappear after the territory and boundary of States have been finalised on the basis of principled application of the linguistic or ethnic basis of States' reorganisation. In the application of the linguistic principle, the criterion of "contiguity and linguistic affinity, with a village as a unit" agreed to in the Rajiv-Longowal (Punjab) Accord may be strictly applied. In case of a dispute as to the language of the majority of the population of a village, the issue may be decided objectively on the advice of linguistic experts appointed with the approval of the two States concerned and not through a census which, when emotions and fears of the local population have been aroused or there is large-scale outside interference, may not be a true guide in the matter. When the boundary between the two States has been finalised on this basis and the two States have made a joint declaration to that effect approved by their respective legislatures by two-thirds majority this boundary must henceforth by unalterable by Parliament except at the request or concurrence of the two States—Article 3 may be amended to provide for this. Every effort must be made during the next few years by the Central and State Governments and all political parties to help finalise all inter-State boundaries, and to merge Union Territories with the appropriate State(s) (except such of them as may be justifiably retained as Union Territories either permanently or till they are raised, at some future date, to the status of a separate State). The proposed amendment to Article 3 will then apply to all the States and all the inter-State Boundaries. In other words, the internal map of India, at the level of the States, would have assumed a final shape and in the future adjustments to inter-State boundaries will be minor, few and far between, and only at the request or concurrence of the States concerned. Likewise, thereafter any change in the name of a State shall be only on the request or concurrence of that State.

Other Unitary Features of the Constitution

2.19 The constraints on States' legislative autonomy with respect to their sphere of Constitutional responsibility have been discussed in Chapter 4. The discretionary powers of the Governor and other constraints on States' administrative autonomy have been examined in Chapters 5 and 6. The extent, nature and casual factors of States' Financial dependence on the Centre and its impact on their autonomy have been brought out in Chapters 7 to 9. The Centre's tight control over the planning process in the States also attributable to the latter's financial dependence on the former, has been described in Chapters 9 and 11.

Some Authoritative Comments on the Character of the Indian Constitution

2.20 Comments of Dr. B.R. Ambedkar and some observations of the Supreme Court bearing on the character of the Constitution have been reproduced below:

Dr. B. R. Ambedkar*

"The basic principle of federalism is that the legislative and executive authority is partitioned between the Centre and the States not by any Law to be made by the Centre but by the Constitution itself. This is what the Constitution does....The Chief mark of federalism as I said, lies in the partition of the legislative and executive authority between the Centre and the Units by the Constitution. This is the principle embodied in our Constitution. There can be no mistake about it. It is, therefore, wrong to say that the States have been placed under the Centre. The Centre cannot by its own will after the boundary of that partition. Nor can the Judiciary."

Supreme Court

(i) Atiabari Tea Co. Ltd. *Vs.* the State of Assam@

"It is a federal Constitution which we are interpreting, and so the impact of Art. 301 must be judged accordingly."

---

* Constituent Assembly Debates, Vol. VII, p. 33.

@ AIR 1961, SC 232.

(ii) **Automobile Transport (Rajasthan) *Vs.* State of Rajsthan@@**

"The evolution of a federal structure or a quasi-federel structure necessarily involved, in the context of the conditions then prevailing, a distribution of powers and a basic part of our Constitution relates to that distribution with the three legislative lists in the Seventh Schedule."

(iii) State of West Bengal *Vs.* Union of India.*

"**The Constitution of India is not truly Federal in character.**"

Justice Subha Rao in his dissenting view:

"The Indian Constitution accepts the federal concept and distributes the sovereign powers between the co-ordinate constitutional entities namely, the Union and the States."

(iv) Kesavananda Bharti *Vs.* the State of Kerala**

The majority held that Art. 308 does not enable the Parliament to alter the basic structure of the framework of the Constitution. Chief Justice Sikri while discussing what constitutes the basic structure of the Constitution mentioned five constituents, one of these was "Federal character of the Constitution."

(v) State of Rajasthan *Vs.* Union of India.***

(a) **Chief Justice Beg** :

"In a sense, therefore, the Indian Union is federal. But the extent of federalism in it is largely watered down...."

(b) **Justice Chandrachud** :

"I find it difficult to accept that the States as a polity is not entitled to raise a dispute of this nature. In a federation whether classical or quasi-classical, the States are vitally interested in the definition of the powers of the Federal Government on the one hand and their own on the other."

(c) **Justice Bhagwati on his own behalf and on behalf of Justice A. C. Gupta** :

"Unconstitutional exercise of powers by the President under Art. 356 cl. (i) ..may infringe ....the constitutional right of the State to insist that the federal basis of the political structure set up by the Constitution shall not be violated by an-un-constitutional assault under Art. 356 cl.(i)."

Conclusion

2.21 **A** federation fully conforming to the "pure" concept of it in abstract theory, where Governments at the national and regional levels are "co-ordinate and absolutely indepenant" within their respective jurisdiction set apart by the Constitution, does not exist as an operating entity any where, at least not among the democratics. It follows that the fact that a Constitution has a number of features theoretically associated with a unitary Governmental structure does not necessarily warrant its characterisation as a unitary Constitution. The question has to be decided on the basis of whether the federal or the unitary elements of it dominate. On this criterion, the Indian Constitution except in very exceptional times—war, external aggression or armed rebellion—when an emergency has been proclaimed under Article 352 in respect of the whole country or a large part of it, functions essentially as a federal constitution even though it has several elements which, being more appropriate to a unitary constitution, to an extent detract from its federal character. It is, indeed, very suggestive that the character of the Indian Constitution is always discussed in terms of how federal it is and hardly ever in terms of how unitary it is. In other words, the issue is always discussed in terms of departures from the federal concept and never in terms of exceptions to the abstract unitary type.

2.22 Union's constitutional and extra-constitutional powers and controls over the States together constitute a serious limitation on the federal character of the Indian Constitution but do not altogether destroy that character. India's state structure essentially remains what the authors of the Constitution, in the circumstances then prevailing sought to establish, namely, "A Federation with a strong Centre" except that as a result of the tendencies inherent in the Constitution reinforced by a relentless centralisation drive by certain social forces and personalities, a serious internal imbalance has been created in the state structure, that between the Union and the States. In the meantime, the circumstances have greatly changed. The problem of integration of Princely States has been solved for good. Large States have been formed on linguistic basis. These states are not mere administrative units but are home-lands of distinct emerging and emerged nationalities.

2.23 At present the main threat to India's unity and integrity comes not from outside but from the real possibility that the present relentless centralisation drive and lack of due regard for the distinct sentiments, interests, and aspirations of the various minority nationalities, communities and ethnic groups may alienate millions and sap their will for a united India. An authoritarian and coercive approach to this perspective will inevitably erode political democracy. Thus, the very character of the Indian state will change. The long term consequences of this course of development are not difficult to foresee. The only sure way to avoid this disastrous scenario is to adjust the state's structure to the changing circumstances that has taken place over the last 36 years by moving firmly forward to the establishment of a genuinely federal structure by purging it of its present unreasonable and uncalled for limitations on the States. To set at rest all doubts about the character of the state structure, in the Preamble the expression "FEDERAL", may be added after the expression "DEMOCRATIC". The expression "Union" may be replaced by expression "Federation" or "Federal", as the case may be, wherever it occurs in the Constitution.

(3) Greater Autonomy for the States

2.24 The case for greater autonomy for the States rests, not on the so-called "traditional" notion of federalism, but essentially on the fact that this alone provides an enduring basis for India's unity and integrity in a society that has since 1858 progressively acquired a multi-national profile. Several of the nationalities are far more numerous than the total population of many nation-States of Europe. India is too big and heterogeneous country to be governed on a highly centralised unitary basis.

2.25 The linguistic re-organisation of States in the post-Independence period was in response to the growing multi-national character of the Indian society. This was an act of great farsightedness and statesmanship on the part of the national leadership, particularly Mr. Nehru, who had a great sense of history. It is this step more than any other factor, which has saved India from going the Pakistan way. To the extent that the re-organisation of States on linguistic basis had remained incomplete or un-principled, the country still continues to be faced with several trouble spots and unresolved inter-state problems. This underlines the historic necessity of this measure.

2.26 The linguistic re-organisation of States, in turn has further quickened the trend towards evalution of India into a multi-national society. This is the most important change that has come about since the late forties when the Indian Constitution was framed. This makes it imperative not only to complete the process of linguistic re-organisation of States in principled way at the earliest possible towards eliminating the remaining irritants among the States and between the Union and the States, but also to further adjust the state structure of the Indian public to the reality of a multi-national society.

2.27 A multi-national society does not necessarily imply, as emphasised in Chapter 1, so many independent States. But the only realistic way in which a multi-national Indian society may be fully contained within a single state is to have a genuinely federal form of Government. It is too late in the day to try to find an alternative solution in an authoritarian Centre which may seek to suppress and smother the distinct character, urges and aspirations of the various nationalities in ways now commonly subsumed under the term "State terrorism". The experience in Nagaland, Mizoram, Assam and Punjab should be indicative enough of the very limited reach and effectiveness of coercive ways in suppressing in modern times the urges and aspirations of aroused and awakened peoples. The only satisfactory and lasting solution of the problem is a genuine federal system which creates a fair balance between the Union and the States. The case for greater autonomy of States rests primarily on the need to achieve a fair balance between the claims of diversity and the requirements of unity.

2.28 There are other considerations, too, that call for greater autonomy for the States. It will promote a congenial environment for vigorous competitive politics which is the very life blood of functioning democracy. It will also promote the revival and reinvigoration of democracy at the grass-root level. One fall-out of a relentless drive, particularly during the last 15 years, for concentration of power in the hands of the Union has been that many State Governments have followed suit vis-a-vis the local levels of Government. This has greatly weakened democracy at the grass-root level over the greater part of the country. generally the enthusiasm for Panchayati Raj institutions has, with a few exceptions, evaporated. These institutions increasingly have meagre powers, resources and authority. Elections are seldom held in time. These institutions are increasingly dominated by the bureaucracy and, at the higher levels of the structure, are many a time actually administered by officialdom. Similar is the plight of Municipal Corporations and Committees. In this respect, Punjab is no exception to the general national scenario. To re-invigorate democracy, it is necessary to strengthen it at the grass-roots. This will call for a reversal of the general centralisation trend now operative in the country for many years. Greater autonomy to the States is an essential step in this direction. This will inevitably build up pressure for the devolution of power, functions and resources from the State to the local level.

2.29 An argument sometimes advanced, particularly by the establishment "progressives", in justification of the centralisation drive is that the Centre is controlled by a more enlightened, progressive and patriotic leadership while at the State level feudal, parochial and ultra-conservative, if not downright reactionary, elements predominate. The Centre's domination of the Indian polity, therefore tends to give a more progressive patriotic and enlightened orientation to it. Facts, however, do not support this claim. A perusal of the bills passed by the State legislatures but reserved by the State Governors for President's (Union Executive's) assent shows that bills seeking to implement the directive principles of State Policy laid down in part-IV of the Constitution have been particularly subject to delay and denial of assent. Over the years, the Union Government has increasingly departed from the country's professed goal of economic self-reliance and socialist pattern of development. Indeed, in recent years the country has been suffering balance of payments deficits of a size never experienced before. The Centre's policy has become increasingly oriented to big business, foreign (transnational) companies and the owning classes in general, notwithstanding the Central Government's studied populist postures. In any case, the character, actual or insinuated, of governments at the Union or State level is not a valid justification for a unilateral, high-handed or surreptitious attempt by any of these Governments to after the basic balance between the two levels established by the provisions of the Constitution. Otherwise. law of the jungle will in fact take the place of the prescribed procedure for amendment of the Constitution.

2.30 In the light of the above perception, the proposals for re-distribution of legislative powers in the three lists of the 7th Schedule are given in Chapter 3. Proposals for deletion, revision or substantial modifications of provisions which give the Union a supervisory role over the States are discussed in Chapters 4 to 6. Measures for augmenting the States financial resources and minimising their financial dependence on the Centre form the subject matter of Chapter 10. Proposals for ensuring the States an effective control over the planning process relating

to their Constitutional sphere of responsibility have been elaborated in Chapter 11. Several of these proposals shall require Constitutional amendments. The view put forth by some circles that no amendments of the Constitution are necessary and that due reform of the Indian polity can be carried out merely by evolving healthy conventions and procedures, and by changing some objectionable regulatory laws does not meet the requirements of the existing situation. The need today is for a combination of (i) necessary constitutional amendments, (ii) adoption of healthy conventions and procedures, and (iii) reform, modification and, where necessary, abolition of regulatory laws and of various constitutional and extra-constitutional instruments and devices adopted by the Union since 1950 to exercise control and supervision over the States and to encroach on their jurisdiction.

2.31 Conventions are a potent force where (i) there is wide-spread awareness about them among the electorate and flouting of an important convention is likely to outrage public opinion and imperil the continuance of the offending Government, (ii) there is a long established tradition of respect for conventions, (iii) the information media are relatively free and very vigilant about any abuse of authority or departures from accepted norms by Government, and (iv) democracy is vigorous, truly multi-party, deep-rooted and unassailable by any political party. Neither of these conditions is adequately met in India at present. There is, therefore, no choice but to carry out the needed reform of the Indian polity and the State structure by appropriate constitutional reform. Healthy conventions and proper procedures would certainly re-inforce the constitutional changes in bringing about the needed adjustment of the State structure of the country to the present stage of evolution of Indian society, but it is doubtful if these could do it by themeselve.

(4) Safeguards for the Country's Unity and Integrity

2.32 There can be no two opinions about protection of independence and ensurance of the unity and integrity of the country. There can be different view points only with respect to what imperils these and how to avoid and overcome these perils. A number of provision in the Constitution have been presumably meant to safeguard independence, unity and integrity of the country. These are listed below :

(i) Part II of the Constitution establishing a common citizenship for all Indians and Entry 17 of List I in the Seventh Schedule making citizenship, naturalisation and aliens a Union subject;

(ii) Adoption of a common National Flag and National Anthem for the country;

(iii) Article 51-A laying down the fundamental duties of citizens of India, particularly clauses, (a), (c), (d) and (e);

(iv) Articles 352 to 360 laying down Emergency Provisions;

(v) Entries 1 to 5 of List I in the Seventh Schedule making defence of India, naval military and air forces, any other armed forces of the Union, cantonments and defence works and equipments an exclusive Union responsibility; Entry 7 making defence industries a Union subject;

(vi) Entry 2-A of List I making deployment of any Armed forces of the Union or any other force subject to the control of the Union in aid of civil power a Union subject;

(vii) Article 355 making it a duty of the Union to protect States against external aggression and internal disturbance;

(viii) Entry 8 of List I making Central Bureau of Intelligence and Investigation a Union subject;

(ix) Entries 10 to 21 of List I making foreign affairs and related matters including questions of war and peace, treaties and agreements with foreign countries and immigration and emigration an exclusive Union responsibility ;

(x) Entries 22 to 31 of List I making railways and rail transport, national highways, shipping, and navigation on inland national waterways, maritime shipping and navigation, lighthouses, major ports and port-quarantines, civil aviation and related facilities, and means of communication Union subjects;

(xi) Entries 36, 37, 38 and 41 of List I making currency, Reserve Bank of India, foreign loans, foreign trade and commerce a Union responsibility; and

(xii) Article 263 providing for the setting up of an inter-State Council by the President.

2.33 All the above provisions are in fact not indispensable for maintaining the country's unity and integrity. For instance, the Administrative Reforms Commission was of the view that under Article 355 the Union was competent to deploy armed and paramilitary forces of the Union in aid of civil power in any State even *suo motu*. It has been argued in Chapters 3 and 6 that this is not a valid interpretation, that it is neither necessary nor desirable for the Union to be vested with this power and that such deployment must be only at the request of the State Government, whether that Government is a populat Government of a Governor's administration under President's rule. Again, in Chapter 3 it has been argued that broadcasting and television should be a Concurrent subject, that is, it should be shifted from List I to List III. This is all the more necessary now that India has evolved into a multinational society. Still again, it has been emphasised in Chapter 6 that the circumstances and conditions of invocation of Article 356 must be clearly specified. And so on.

Economic and Political Measures for Consolidation of National Unity and Integrity

2.34 The Constitution provides adequate, or even excessive, safeguards against any threat to the country's unity and integrity. It is crucially important to reinforce the constitutional provisions and the coercive power of the Union by economic and political measures to consolidate national unity and integrity. While discussing the sanction, or the source of authority of the modern State, the political scientists no doubt invariably make a mention of

its overwhelming coercive power vis-a-vis individual citizens or their other associations as the obvious sanctions. But the liberals and the democratically inclined among them do point out that the ultimate sanction for State's authority is the citizens' "will to state", i.e. the citizens' determination to preserve the state and to protect it against any threat to its territorial jurisdiction, power and authority. In keeping with out democratic protestations, everything possible must be done to arouse and reinforce the citizens' will to the Indian Republic. To do this, it will be necessary to ensure the following :

(i) A flourishing economy;

(ii) Wide diffusion of prosperity and well-being;

(iii) Equal consideration for the interests and sensibilities of all nationalities, religious communities and ethnic groups;

(iv) Political fair-play;

(v) A climate of freedom where all shades of opinion can express themselves openly and freely;

(vi) A Scrupulous regard for citizens' fundamental rights as guaranteed in the Constitution;

(vii) Active promotion of common organisation and fraternal feelings, and just and speedy settlement of issues among the different States, nationalities, religious communities and ethnic groups;

(viii) Scrupulous regard for the letter and spirit of the Constitution and the usual conventions of the parliamentary government; and

(ix) Promotion of industrialisation and modernisation of the economy and, in the process, creating regional inter-dependence.

2.35 Adequate progress in all these directions may itself be an effective safeguard for the country's unity and integrity. This may largely reduce the emergency provisions of the Constitution to the role of a reserve instrument to be used only very rarely.

The Federal Concept in a New Role

2.36 The federal concept of state structure, because of its historical antecedents in India, arouses apprehensions among many, particularly in the heartland States, which the Chauvinists are quick to exploit. The British had come to show interest in a federal structure of Government for a united India primarily as a device to protect and buttress the position of the Princes in it, and because of the opportunities which in the then prevailing circumstances it was expected to provide to play the Hindus, the Muslims and the Sikhs against one another and the Princes against all of them, to keep a united India weak and dependent upon themselves. They also expected that the internal checks and balances of this structure, which they hoped it would inevitably have, would make it impossible for united India to touch British vested interests in this country.

2.37 Federalism is now being viewed in a totally new role, that is, as a device to meet the challenge of the situation that has arisen in the country. The pre-Independence context has readically changed. The Princely States have been consigned to the flames of history and are beyond resurrection. Their former population has been liberated from the Princely yoke and have merged indistinguishably with the rest of the Indian citizenry. The Muslim question no longer has the potential of growing into a threat to the country's integrity. It has become a part of the general problem of safeguarding the cultural and other legitimate interests of the country's religious minorities. There is no external force occupying a commanding position in the country and using it to fan conflicts and animosities among the Indian peoples.

2.38 The march of history has, however, thrown up new problems. The historical process based on diversity of language and ethnicity has created new forms of diversity, that of a multi-national society and of awakened ethnic minorities. The latter who are predominant in some parts of the country, are becoming increasingly conscious of their distinct identity and of ruthless exploitation by others, and are demanding a fair deal to themselves. These new forms of diversity are far more significant for the future of the country than what the older forms of it, which the new forms cut across, ever were. Federalism is now being viewed as a conceptual frame to accommodate the legitimate claims of the new forms of diversity and thus consolidate the unity and integrity of the country by developing India into a happy family of equal and fraternal nationalities and ethnic groups who are bound by indestructible ties of shared urges and aspirations, interests and endeavours, and weal and woe. This is an altogether different role of federalism than what the British sought. The danger to the country's unity and integrity lies not in going the federal way but in failing to do so and persisting with the present relentless all round centralisation drive. The letter course would suggest such uttar lack of sense of history as does not befit the peoples of Nehru's land.

The Legislative Lists

3.1 The suggested changes in List 1, List II and List III of the Seventh Schedule are given in Annexures I, II and III. The write-up giving the rationale of these changes is given below :—

(1) LIST I

Entry 2-A

3.2 The founding fathers of the *Constitution* made public order a State subject (Entry I List II). This implies that the use of armed forces of the Union in any State in aid of the civil power must be only at the request of, or with the concurrence of, that State and never *suo motu* by the Union. If, in a situation which obviously calls for intervention by the para-military or the armed forces of the Union in aid of the civil power, a popularly elected Government of a State fails to make a request or give its concurrence to such intervention, President may legitimately take over the Government of a State under Article 356 on the plea of complete breakdown of law and order, thereby clearing the way for intervention by Union's armed and para-military forces in aid of civil power at the request or concurrence of the Governor's administration. It is difficult to imagine a case where a State Government faced with a situation where indeed it cannot restore law and order with its own police force will not request or, or concur with, such intervention. Entry 2-A

has been modified to make it clear that the Union shall use its armed and para-military forces only at the request or concurrence of the State Government, whether that Government is a popularly elected Government, or it is the Governor's administration under President's rule. The suggested modification also stipulates that such deployment shall be on terms and conditions determined by the Union with the concurrence of the Inter-State Council. These terms and conditions shall be the same for all States.

Entry 24 :

3.3 There is no reason why the Union may have jurisdiction over shipping and navigation on inland water-ways other than inter-State rivers. The suggested modification limits the scope of Entry 24 accordingly.

Entry 30 :

3.4 The suggested modification to Entry 30 is in line with the suggested modification to Entry 24. The words "national waterways" have been substituted by "inter-State rivers".

Entry 31 :

3.5 In the past, the telephone facilities were departmentally run. But with effect from 1986-87, the Mahanagar Telephone Nigam, an autonomous body has taken over management and development of telephone facilities in Bombay and Delhi. It would be in line with this trend if autonomous bodies set up by the Union are responsible for telephone facilities in the metropolitan towns while in other towns and rural areas the autonomous authorities set up by the States are made responsible for management and development of telephone facilities. It is, therefore, proposed to shift telephones from List I to List III.

3.6 Overseas communications may best be managed by the Union as is being done at present. This item has been added to Entry 31.

3.7 The States which are responsible for a substantial chunk of development activity and have been in most cases reorganised on linguistic lines need to have adequate access to radio and television facility to propagate their language, culture, values, development programmes and different viewpoints with regard to their special problems and opportunities. They do not get reasonable access now, particularly the States which have Governments of parties other than the ruling party at the Centre. It is, therefore, proposed that broadcasting and television may be put in the Concurrent List as a new Entry 25-A of that List and the vague expression "other like forms of communication" may be deleted as the provision in respect of residuary powers can take care of this. It is assumed that there will be common guidelines for the radio and television facilities controlled by the Union and the States to prevent a misuse of these facilities by either level of Government.

Entry 40 :

3.8 The Union should have within its jurisdiction only lotteries organised by the Government of India. Likewise the State should have jurisdiction over the lotteries organised by the State Government. Entry 40 has been modified accordingly.

Entry 45 :

3.9 The monetary authority, namely, the Reserve Bank of India, ought to be in the jurisdiction of the Union. Entry 38 of List I provides for this. But why should commercial banks, financial institutions ect. also be wholly within the jurisdiction of the Union ? Banking represents too big a concentration of economic power. There is no reason why it should be the monopoly of a particular level of Government. It is, therefore, proposed that banking other than R.B.I. should be shifted from the Union List to the Concurrent List and shown as new Entry 32-A of the latter List.

Entry 48 :

3.10 Stock exchanges are of national significance and ought to be in the Union List. But the same is not true of futures markets, which are mostly of local or regional significance. These are deleted from the Union List and shifted to the State List.

Entry 52 :

3.11 The framers of the Constitution had put Industries mainly in the State List, the only exception being industries subject to provision of Entry 52 of List I. The Constitution (Seventh Amendment) Act, 1956 substituted "Entries 7 and 52" for "Entry 52". The obvious intention was that while the Union would have jurisdiction over key, basic and defence industries which are obviously of national or strategic importance, all other industries will be within the purview of the States. But the Union has grossly misused the expression "in public interest" and abused the power conferred on it by Entry 52. It has brought even in essential consumer goods within the scope of the Industries (Development and Regulation) Act, 1951 passed with reference to this Entry. Industries has become virtually a Union subject in substantial violation of the intentions of the framers of the Constitution. Entry 52 is accordingly proposed to be modified to limit Union's control to specified key, basic and strategic industries. Entry 7 providing for Union's control over defence industries has been retained as it is.

Entry 53 :

3.12 It is not necessary that everything concerning petroleum and petroleum products must be within the purview of the Union. It is necessary to identify the particular phases of the petroleum sector to which the jurisdiction of the Union ought to extend. These are : petroleum, oil and gas exploration, extraction, transport and marketing and petroleum refineries and gas processing units. Wholesale marketing of petroleum products and of LPG does not have to be the exclusive concern of the Union. The Concurrent List is considered the proper place for this activity. Retail marketing of petroleum products and LPG should be in the State List. There is also no sound reason why other dange ously inflammable substances should be the concern of the Union. Matters pertaining to these substances within the territory of a State should be the concern of that State as it will have to bear the consequences of any mishap relating to such substances. Entry 53 has been accordingly modified. To ensure a largely uniform approach to these substances on the part of the States, the Inter-State Council may frame guidelines

on the subject for consideration and adoption by the States, with modifications to suit local conditions.

Entry 54 :

3.13 The Union ought to be concerned only with key and strategic minerals. Even in the case of these minerals, unless genuine public interest such as security considerations for conservation of strategic materials requires otherwise, the Union should be concerned with only significant deposits. In order to promote also the mining of non-key and non-strategic minerals and small deposits of all minerals, mines and mineral development other than that specifically brought within the purview of the Union may be put on the State List. Suggested modification of Entry 54 is in line with this approach.

Entry 55 :

3.14 Regulation of labour and safety in oil-field ought to be, as it is at present, within the exclusive jurisdiction of the Union. But the Union's responsibility with regard to mines should be limited to such of the mines as are within the jurisdiction of the Union in terms of Entry 54. Entry 55 is suggested to be modified accordingly.

Entry 56 :

3.15 (i) Water has been considered as a precious and scarce, resource and has very great significance for vast numbers of the people living in the States. Land and water are the most important resources which provide a base for all development activities. The vital importance of this has been kept in view by the Federal/Central Government for the last over a century. All laws passed from time to time and the provisions of the Constitution of India are based on recognition of the above fact and these placed water that is to say, water supplies, irrigation and canals, drainage and embankments, water storage and water power in the Provincial Legislative List. The above position which prevailed in the Government of India Act, 1935 was adopted almost entirely by including this subject in Entry 17 of List II of Seventh Schedule but added the words "subject to the provisions of Entry 56 of List I" at the end.

3.15 (ii) Entry 56 of List I reads as follows : "Regulation and development of inter-State rivers and river valleys to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedient in the public interest." The only relevant law made by Parliament under Entry 56 of List I is the River Boards Act, 1956 to the limited extent of empowering the Central Government on a request made by a State Government or otherwise to establish a River Board for advising the Governments interested in the regulation or development of an inter-State river or river valley. This power can be exercised by the Central Government only after consultation with the State Governments interested. The functions of the River Board are advisory in nature. Section 22 of the Act provides for arbitration of any dispute or difference between two or more Governments with respect to the matters specified in section 22. No River Board has been established under this Act as yet. Thus, there is no law made by Parliament under Entry 56 of List I curtailing the powers of any State Legislature or State Government flowing from Entry 17 of List II. It follows, therefore, that only riparian States have exclusive jurisdiction with respect of waters of inter-State rivers in their territories. A nonriparian valley State of an inter-State river has no right to claim any share in such waters. Report of the Narmada Water Disputes Tribunal, Volume III (1978) pages 16, 17, 19-21, 26 and 30.

3.15 (iii) The State has full right to use water resources available within the State because the economy of the people of that area has been dependent on that resource for centuries. Exploitation of such resources available within the State can be possible if full powers vest with the State for exploiting these resources. The State Govt. is of the considered view that devolution of greater powers to the States for accelerating the process of development of the country is essential. In the crucial area of water resources use, the above concept of greater devolution of powers is equally important and should not be overlooked or diluted in any way.

3.15 (iv) Entry No. 56 of List I of the Seventh Schedule of the Constitution.

This gives the Union the power to make laws for the regulation and development of inter-State rivers and river valleys to the extent to which the regulation and development under the control of the Union is declared by Parliament by law to be expedient, in the public interest. To this extent, the jurisdiction of States over water resources conferred by Entry 17 in List II of the Constitution stands modified.

3.15 (v) Article 262 of the Constitution of India states that the Union Parliament may by law provide for adjudication of any dispute or complaint regarding the use, distribution or control of the waters of or in any inter-State river or river valley. Under this Article of the Constitution of India, the Union Government has enacted Inter-State Water Disputes Act, 1956 which provides the legal frame work under which State Disputes are to be settled. Doubts have been expressed about the scope of interpretation of the provisions as to who can arise a dispute and also about the meaning of Inter-State River or River Valley. Is any State which is not riparian entitled to raise a dispute in regard to a river which is Inter-State though such river does not pass through or border on such State ? Apparently, the scheme of the Constitution of India implies that rights are to be determined in accordance with Entry 17 of List II but in the absence of any specific words in the Inter-State Water Disputes Act, 1956, contrary arguments continue to be advanced. There is a need to settle such doubts by amending the said Act to make the above intention clear.

3.15 (vi) Whereas 3.15 (v) above is a useful provision in that special attention can be given to inter-State Water disputes as compared with other Inter-State Dispute which can only be adjudicated in the Supreme Court under Article 131 of the Constitution, the provision at 3.15 (iv) above, gives the Union jurisdiction over water resources in inter-State rivers and river Valleys even when there is no dispute between States. This confers a vast and unfettered power in the Union. This is particularly so in view of the much larger resources with the Union, which can use these in conjunction with its power under Entry 56, List I to encroach on an area which

is rightly within the jurisdiction of these States. This Entry therefore, needs to be removed from List I of the Constitution.

Entry 60 :

3.16 The suitability of cinematographic films for exhibition is intimately related to the culture, deeply-held beliefs and values of the particular population. In India there is a marked ethnic, linguistic, religious and cultural diversity. It is quite possible that a particular film which may be received very well by a predominant section in one State may provoke riots in another State where it deeply offends the sensibilities of a major section of the population. The number of films being turned out each year is also very large and is expected to grow further as the trend towards producing pictures also in languages other than Hindi gathers momentum. There is justification now for transferring sanctioning of cinematographic films from List I to List II. Accordingly Entry 60 has been deleted.

Entry 62 :

3.17 It will be unfair if Parliament brings another institution like the ones mentioned under Entry 62 within the jurisdiction of the Union by declaring it by law to be an institution of national importance even if the Government of India is financing this institution only partly. The suggested amendment to Entry 62 stipulates that this should be permissible only if the Government of India is financing the institution to the extent of a minimum of 75 per cent.

Entry 63 :

3.18 Establishment of more Central Universities is not in keeping with the view that education should be shifted back from the Concurrent List to the State List. All new Universities should be set up by the States. The Government of India could, in a particularly deserving case, give a grant to a State to set up the University. Entry 63 is proposed to be modified accordingly.

Entry 64 :

3.19 The suggested modification is in line with that suggested in respect of Entry 62.

Entry 66 :

3.20 Co-ordination and determination of standards in institutions for higher education or research, or scientific and technical education, is suggested to be modified in line with the proposed modifications to Entries 62, 63 and 64 and the suggested transfer of education from the Concurrent to the State List. In other words, it is proposed to be limited to such of these institutions as are financed by the Government of India wholly or to the extent of a minimum of seventy-five per cent and declared by law to be institutions of national importance. The implication is that co-ordination and determination of standards in respect of other such institutions will be made the responsibility of the States. Entry 66 is suggested to be modified accordingly.

Entry 76 :

3.21 There is no reason why the audit of the accounts of the States should also be within the purview of the Union. The suggested modification to Entry 76 is in accordance with this view. As a corollary to this, it will be necessary to have separate Federal and State Audit Services.

Entry 84 :

3.22 Excise Duties are the fastest growing source of tax revenue. At present, these duties are within the purview of the (Union) except those levied on alcoholic liquors and narcotics for human consumption. For bringing out a basic improvement in State finances, it is necessary to provide the States with adequate access to revenue from excise duties. This is now being done by allowing the States a share in the Union Excise revenue in accordance with the recommendations of the Finance Commission. Under the recommendations of the Eighth Finance Commission, the latest Commission so far, 40 per cent of the Union Excise revenue, after prescribed deductions from it, is distributed among all the States and 5 per cent of it among the States which still have a deficit on non-plan revenue account. *Inter-se* distribution among the States is to the serious disadvantage of the higher per capita income States. Since the burden of excise duties ultimately falls on the consumers of excisable items in the form of higher prices, the higher per capita income States, because of their higher per capita consumption of excisable items, contribute a relatively higher proportion of the excise revenue. But under the distribution criteria adopted by the Finance Commission, these States receive a much lower proportion than their contribution. For example, Punjab which contributes not less than 5 to 6 per cent of the Union excise revenue receives as its share only 1.2 per cent of the 40 per cent distributed to all the States and no share whatsoever in the 5 per cent distributed to the revenue deficit States. It is necessary to think of an alternative arrangement which would be fair to all the States and also provide them with a strong incentive to develop industrial production. Keeping this consideration in view, it has been suggested that excise duty of industrial units defined by Parliament by law as small-scale units may be excluded from the jurisdiction of the Union and shifted to the State-List.

3.23 In course of time as the definition of "Small scale" is liberalised by Parliament in line with the past practice so as to bring a growing number of units under this category, the States will get a growing revenue from this source. They will also have a strong incentive to promote a vigorous development of this sector as they will gain directly from the progress made in this direction. Entry 84 is suggested to be modified accordingly.

Entry 90 :

3.24 Since futures markets are proposed to be shifted to the State List, taxes other than stamp duties on transactions in these markets should also likewise be shifted out of the jurisdiction of the Union.

Entry 97 :

3.25 Residuary powers are proposed to be shifted to the Concurrent List so that any subjects not included in List I or List II could be dealt with, depending on its nature, by either the Union or the States without an amendment of the Constitution affecting the contents of the Seventh Schedule.

3.26 At present, under Entry 97, a new subject will necessarily have to be dealt with by the Union even if it is obvious that it may be dealt with best at the level of the States. It will not be possible to transfer it to the States except by a constitutional amendment or by the Union delegating it to the States. But mere delegation is not equivalent to a right conferred on the States by inclusion of residuary powers in the Concurrent List.

(2) LIST II

Entry 1 :

3.27 The rationale of the proposed changes in Entry 1 is given above in the write up on Entry 2-A of List 1.

Entry 1-A :

3.28 It is new Entry to accommodate Entry 3 of List III with the suggested modification. Since public order is a State subject, preventive detention for reasons connected with the security of a State, and the maintenance of public order, and the persons subjected to such detention, may be a State subject and not a Concurrent subject as at present. There may be no detention for reasons connected with the maintenance of supplies and services essential to the community Persons who endanger such supplies and services may be proceeded against only for violation of specific laws. The existing Entry on the subject has accordingly been modified.

Entry 3 :

3.29 The Constitution (Forty-second Amendment) Act, 1976 was pushed through during the very abnormal situation created by the Emergency. It reflected the extreme centralising tendency then prevalent. It not corrected in time, this tendency will endanger the unity and integrity of the country. This has been the basic approach underlying the suggested changes in the Entries, enumerated under different Lists, that were effected by the Forty-second Amendment.

3.30 One such change was to unjustifiably transfer "Administration of Justice; constitution and organisation of all courts, except the Supreme Court and High Court" from Entry 3 of List II to a new Entry 11-A in List III. It is suggested that this subject be transferred back to Entry 3 of List II.

Entry 6-A :

3.31 Population control and family planning is at present a Concurrent subject. The Forty-second Amendment inserted it as a new Entry 20-A in List III. The State activity in this direction is promoted and financed by the Union under a Centrally Sponsored Scheme and like all other such schemes in implemented by the State Governments. In spite of the very large amounts spent by the Centre on this scheme year after year, population control has made little headway as yet. Indeed, in the 1970s. the decadal growth rate of population has turned out to be marginally higher than in the 1960s, 25% as against 24·8%. Family planning facilities should be an integral part of the health facilities which is a State Subject. The present dichotomy between the two facilities hampers their adequate integration. Sponsorship and financing by the Centre prevents proper adjustment of the family planning programme to the specific circumstances of different States and the ethos and psychology of their people. In a vast country like India with great diversity, a programme like population control which necessarily depends on generating a strong motivation among the people and evoking a vigorous positive response on their part cannot possibly be run from a single point on a uniform schematic pattern. It must have due flexibility in its approach and methods. For these considerations it is proposed to transfer population control and family planning from List III to List II as a new Entry 6-A. There will need to be a corresponding transfer of resources from the Centre to the State.

3.32 Vital statistics including registration of births and deaths is an allied subject. It is suggested to be shifted from Entry 30 of List III to Entry 6-A of List II.

Entry 7-A :

3.33 Family law is at present a Concurrent Subject which in effect makes it a Union responsibility. Since India is a country of marked religious, cultural and ethnic diversity, the only way to ensure that family law fully takes into account the traditions, cultural mores, personal law and requirements of all sections & groups of population in each State is to make it exclusive a State subject. Again while admitted family law needs to be reformed, the task will be facilitated if, instead of the Union Government attempting it on a uniform all-India basis, the State Governments may undertake it is accordance with the level of consciousness and requirements of different sections and groups of their population. It is, therefore, suggested that family law may be transferred from Entry 5 of List III to List II as a new Entry 7-A.

Entry 8-A :

3.34 In order to deal effectively with spurious, substandard, adulterated and unnecessarily differntiated drugs, and to check spread of the use of intoxicating drugs, it is suggested that the States may be vested with exclusive responsibility for drugs and poisons, subject to the provisions of Entry 59 of List I (concerning opium). This may be done by transferring the provisions of Entry 19 of List III to a new Entry 8-A of List II.

Entry 9 :

3.35 Mental Health should be a State subject just as physical health already is. It is, therefore, suggested that the provisions of Entry 16 of the Conceurrent List may be transferred and added to entry 9 of List II.

Entry 9-A :

3.36 Vagrancy and nomadic and migratory tribes are obviously a local problem. It is suggested that the provisions of Entry 15 of List III may be transferred to List II and shown as a new Entry 9-A.

Entry 11 :

3.37 Education was unjustifiably transferred from List II to List III by the Forty-second Amendment. It is suggested that it may be restored to List II as Entry 11. This is the only way to promote the language, literature and culture of different Indian nationalities

on an equal footing, to undertake the needed reform of education, State by State, according to their respective circumstances, so as to raise its qualiy and make it more relevant to social needs and the development goals, and to achieve near universal literacy among the population of 10 + age. There is an urgent need to halt the present relentless drive to centralise education, accentuate its bias towards the better off strata, impose a dead uniformity on all the States, and to discriminate against the languages, literature and culture of minority nationalities and groups.

Entry 11-A :

3.38 In lines with the suggestion for transfer of education to List II, it is proposed that the co-ordination and determination of standards in institutions for higher education or research and scientific and technical institutions located in a State, with the exception of institutions that are within the puıview of entries 63, 64 and 65 of List I, may be transferred from the Union list Entry 66 to State List and shown as a new Entry 11-A. The Centre has in fact been trying to encroach directly on the field of school education as well and to coordinate standards even in this segment of the education structure. The recently announced new Education Policy proposes to further intensify this drive. This trend in education policy needs to be reversed.

3.39 It is envisaged that after the suggested change in jurisdiction with regard to education has been effected, the necessary inter-State coordination in this subject may be effected through the medium of the Inter-State Council. It is also envisaged that the Centre will continue to coordinate and determine standards in the institutions that will continue to be under its jurisdiction under the provisions of Entries 63, 64 and 65 of List I.

Entry 12 :

3.40 Archaeological sites and remains other than those declared by or under law made by parliament to be of national importance should be a State subject according this subject is suggested to be transferred from Entry 40 of List III to List II as an addition to entry 12.

Entry 12-A :

3.41 Keeping in view the great religious, cultural, social and institutional diversity in the Country, and the very large and growing number and wide variety of charities and charitable institutions, charitable and religious endowments and religious institutions, it is proper that these institutions with regard to their operations in a State should be subject to the jurisdiction of the State. Since such institutions sometimes also acquire a covert, if not an overt, political role, there can arise serious inter-State complications if institutions controlled and managed in one state operate in other State without the latter having any jurisdiction in respect of their operations there. The States, of course, will be obliged to exercise their jurisdiction under Entry 12-A so as not to infringe the Fundamental Rights to Freedom of Religion (under Articles 25 to 28) and to Cultural and Educational Rights (under Articles 29 to 31).

Entry 13 :

3.42 The suggested modifications to Entry 13 follow from : (i) the modifications suggested in List I to Entries 24, 30 and 31; and (ii) the transfer of minor ports, traffic on inland waterways (other than inter-State rivers) and mechanically propelled vehicles suggested below from Entries 31, 32 and 35 of List III to List II.

Entry 13-A :

3.43 Printing presses is an industry. Since it is not a key, basic or strategic industry, it falls outside the suggested purview of Entry 52 of List I. The proper place for it is list II.

3.44 Newspapers and books are important information media. The party and the interests ruling at the Centre must not have monopoly control over these as is presently the case when this subject is included in List III, Entry 39. Towards ensuring genuine freedom of press and publication for all shades and colours of opinion, it is suggested that this subject be shifted to List-II and shown as Entry 13-A. This will also help to create a more congenial environment for publication of newspapers and books in all Indian languages. The States will of course be obliged to exercise their jurisdiction over these subjects in a manner consistent with the Fundamental Right to freedom of speech and expression (under Article 19).

Entry 15 :

3.45 It is difficult to understand why it has been considered necessary to let the Centre have an overriding jurisdiction over prevention of cruelty to animals by including this subject in List III as Entry 17. There is nothing to suggest that the power-wielders at the Centre would be inherently more concerned about cruelty, whether to humans or to animals, than those in the States, Moreover, the Union Government is too far removed from the man who grievously illtreats his buffalo (for milk) or his donky (for great speed or heavier load) to afford much protection to the victims. The subject of animal protection, like agricultural and allied activities in general rightfully belongs to List II. It has been suggested that it may be shifted to List II as an addition to Entry 15.

Entry 17 :

3.46 The rationale for giving the States full right to utilise water has already been given under Entry 56 List I in paragraph 3·15 above. Therefore, the world "subject to the provision of Entry 56 of List I" should be deleted from this Entry.

Entry 18 :

3.47 Reform of land tenure and protection of tenants, because of the importance of these subjects, needs to be expressly mentioned as a State responsibility. This has been done in the suggested redraft of Entry 18 of List II.

Entry 19 :

3.48 Forests are a subject allied to agriculture. Like agriculture it may be a State subject. It actually was so till the Forty-second Amendment transferred it to List III as Entry 17-A. Nothing in the past 9

years suggests that this has resulted in a big improvement with regard to planting care, conservation and development of forests. The steady loss of the country's already inadequate forests cover remains as ever a serious national problem. The remedy lies not so much in transferring forests to the Concurrent List as in creating a strong public awareness about their role in the country's economy and ecology and taking effecting measures against unauthorised exploitations. Furthermore, afforestation is eminently suitable for utilisation of voluntary labour and for useful deployment of manpower under the special employment programmes. The subject is proposed to be put back in List II as Entry 19.

Entry 20 :

3.49 Protection of wild animals and birds may be like agriculture, forests and protection of animals and for the same reasons, within the jurisdiction of the States. It may be transferred from List III, Entry 17-B to List II, Entry 20.

Entry 23-A :

3·50 The rationale for the new Entry in List II is given in the write-up on Entry 55 of List I.

Entry 24-A :

3.51 "Trade unions, industrial and labour disputes" is at present a Concurrent subject (Entry 22). The States should be vitally interested in growth of healthy trade unionism, speedy settlement of labour disputes and establishment of cooperative industrial relations as they will benefit the most from such an environment. These subjects may be the exclusive responsibility of the States. This explains the new Entry 24-A.

Entries 24-B and 24-C

3.52. Labour Welfare, employment and unemployment, social security and social welfare have a direct bearing on the quality of life. These are among the important areas for the different States to emulate one another. Progressive and efficient State Governments may like to take a part of the gain from their superior performance in the very desirable and politically rewarding form of fuller social security, healthier employment situation and superior labour welfare for there people. This will serve as a major incentive to State Governments to improve their performance. At present these subjects have been shown in the Concurrent List (Entries 23 and 24). This tends to hold back most States to a certain low level uniformity with regard to these subjects. To strengthen the motivation of the Governments and people of the States for superior economic and social performance, these subjects may be made an exclusive State responsibility. The employment programmes sponsored by the Centre are even today implemented through the agency of the States as Centrally sponsored Schemes on the basis of matching contribution by the Centre and the States for financing these. The divided responsibility stands in the way of planning and implementing these programmes on a long-term basis, taking into full account the peculiar circumstances and requirements of each State. Transfer of these programmes and the associated resources, exclusively to State responsibility may improve their effectiveness and relevance.

3.53. To give effect to the above suggestions, the subjects included in Entries 23 and 24 of List III may be transferred to List II and shown as new Entries 24-B and 24-C. The contents of the new Entries assume that social security includes social insurance. In Entry 24-B social welfare has been added to social security to make the Entry more comprehensive in scope.

Entry 25-A :

3.54. The entire field of electricity is at present a Concurrent subject. Taking advantage of this, the Centre is steadily taking over this sector. The States are greatly hampered in electricity development as all their projects, including even small projects, need Centre's approval. This often takes years and seriously delays development. This is an important contributory factor to varying degrees of chronic power deficit suffered by most States. It is suggested that the subject be divided into two parts. While electricity generation and high voltage transmission (110 Kv. and above) by public utilities may remain a Concurrent subject, low voltage transmission (below 110 Kv.), distribution and rural electrification and captive power plants may be made an exclusive State subject. Finance of electricity development may be a Concurrent subject. To give of fact to these suggestions a new Entry 25-A has been added to the State List and Entry 39 of the Concurrent List has been appropriately modified.

Entry 25-B :

3.55. Factories and boilers are currently a List III subject (Entries 36 and 37). In line with the suggestion that Industries other than those covered by Entry 7 and Entry 52 with the envisaged limitation in its scope, —vide the write up on this Entry of List I should be a State subject, it is suggested that factories and boilers may be shifted to List II and shown under a new Entry 25-B.

Entry 26 :

3.56. Inter-State trade and commerce is at present a Union subject and may remain so. But there is no reason why trade and commerce within a State may not be in the exclusive jurisdiction of that State. The only reasonable exception to this might may be the inputs of defence and war industries within the purview of Entry 7 of List I. The trade and commerce in these inputs may be put in the Concurrent List to ensure their uninterrupted flow to production units. But the items of intra-State trade and commerce which at present figures in the Concurrent List under Entry 33 cover a wide area comprising : (a) the products of any industry at present within the purview of Entry 52 and imported goods of the same kind as such products (b) foodstuffs including edible oilseeds and oils (c) cattle fodder, including oilcakes and other concentrates; (d) ginned or unginned raw cotton and cotton seed; and (e) raw jute. There is no justifiable reason why trade and commerce within the State in these items should not be within the exclusive jurisdiction of the State. Entry 26 of List II has accordingly been modified and Entry 33 of List III deleted.

Entry 26-A :

3.57. As explained in the write up on Entry 53 of List I, retail marketing of petroleum products and L.P.G. should be within the exclusive jurisdiction

of State Governments. A new Entry 26-A is inserted in List II to provide for this. This Entry also accommodates liquids and substances declared to be dangerously inflammable shifted from Entry 53 of List I.

Entry 26-B :

3.58. Establishments of standards of weights and measures had been correctly enumerated in List I. This was particularly necessary at the time of drawing up of the Constitution to facilitate introduction of uniform weights and measures all over the country and to end the then prevailing multiplicity in this respect. The introduction of a uniform metric system of weights and measures all over the country has been a major economic reform in the post-Independence period. But there is no reason why enforcement of weights and measures may also be put in the Concurrent List and not made an exclusive State responsibility. Hence the suggestion has been made that the subject "weights and measures excluding establishment of standards" may be shifted from Entry 33-A of List III to List II as an additional Entry 26-B.

Entry 27 :

3.59. It is proposed that the scope of Entry 27 List II may be enlarged to include procurement. Furthermore, it is suggested that production, supply and distribution of the items mentioned under Entry 33 of List III may also be brought within the scope of Entry 27 of List II by deleting from the latter the words "subject to the provisions of Entry 33 of List III". In line with this suggestion Entry 33 of List III is altogether deleted. The scope of Entry 27 of List II, however, has been limited so as to exclude the products of industries within the scope of Entry 7 of List I. Entry 27 has accordingly been modified.

Entry 28 :

3.60. Since future markets are suggested to be brought within the purview of the States (vide write up on Entry 48 of List I), the scope of Entry 28 of List II is enlarged to include these markets.

Entry 28-A :

3.61. Since the States are envisaged to control exclusively trade and commerce within the State, the subject of adulteration of foodstuff and other goods should also be put within their exclusive jurisdiction by deleting Entry 18 of List III and correspondingly inserting a new Entry 28-A in List II.

Entry 33 :

3.62. Sanctioning of cinematograph films for exhibition in a State has been suggested (vide write up on Entry 60 of List I) to be put exclusively within the jurisdiction of that State. This is considered necessary to enable each State to protect the dignity and distinct culture of its people against various forms of chauvinistic and cultural aggression by other Indian nationalities, religious communities and ethnic groups and by foreign cultures and nations.

Entry 34-A :

3.63. As mentioned in the write up on Entry 40 of List I, the States should have jurisdiction over the lotteries organised by them. Provision for this has been made by inserting a new Entry 34-A in List II.

Entry 36 :

3.64. As explained in the write up on Entry 33 of List I, it is suggested that States may have jurisdiction over acquisition and requisitioning of property for their own purposes. A new Entry 36 providing for this is inserted in List II while Entry 42 of List III is deleted.

Entry 37 :

3.65. At present while taxes on mechanically propelled vehicles are a State subject (Entry 57), the jurisdiction for determining principles on which such taxes are to be levied figures in the Concurrent List (Entry 35). This is an avoidable limitation on the States. The taxes on mechanically propelled vehicles as well as the principles on which these are to be levied may be within the jurisdiction of the States. The scope of Entry 57 has been enlarged to provide for this. At the same time Entry 35 of List III is proposed to be deleted. Any inter-State coordination with regard to principles on which such taxes are to be levied should be effected through the medium of the inter-State Council.

Entry 63-A :

3.66. Since it is proposed that future markets may be within the scope of the States, the taxes other than stamp duties on transactions in future markets may also be in the State list. Hence the new Entry 63-A.

Entry 64-A :

3.67. Inquiries and statistics for the purposes of any of the matters specified in List II and List III are at present in List III (Entry 45). There is no justification why inquiries and statistics for the purposes of any of the matters specified in List II may be in the Concurrent List. These need to be included in List II. This has been provided by insertion of a new Entry 64-A in List II. At the same time it is proposed that the scope of Entry 45 of List III may be limited to inquiries and statistics for the purposes of any of the matter specified in List III.

Entry 67 :

3.68. As pointed out in the write up on Entry 76 of List I, the audit of the accounts of the States may be their own responsibility and not that of the Union. The new Entry 67 provides for this.

(3) LIST III

3.69. The subjects enumerated in List III have been suggested to be mostly shifted to List II. Some Entries are proposed to be modified. One Entry is envisaged to be altogether deleted. Under two Entries enlargement of scope of the subject is suggested. Four new Entries (25-A, 32-A, 32-B and 48) are proposed. After the suggested changes, the Concurrent List would comprise only the following Entries :—

1, 2, 6, 7, 8, 9, 10, 11, 12, 13, 14, 20, 21, 25-A, 26, 27, (modified), 29, 32-A, 32-B, 34, 38, 41, 43, 44, 45. 46, 47 and 48.

Rationale of Transfer/Modification of subjects

3.70. The rationale of transfer of subjects from List III to other Lists and of any modifications effected in these is given in the write up on corresponding Entries in these Lists. The Lists and number of the corresponding Entry is given below :—

Entries in List III suggested to be shifted wholly or partly with or without modification	Write up reference for the rationale of the suggested change	
	List	Entry
3	II	1=A
5	II	7=A
15	II	9=A
16	II	9
17, 17-A, 17-B	II	15
18	II	28-A

Relationale of Deletion

Entry 4 :

3.71. Preventive detention is suggested to be shifted to Entry 1-A of List II. The question of removal of detainees will not then arise. The detainees shall remain within the State that detains them. Entry 4 of List III which provides for inter State shifting of detainees is, therefore, proposed to be deleted.

Rationale of Enlargement/Addition

Entry 25-A :

3.72. A new Entry 25-A has been added to accommodate broadcasting and television shifted from Entry 31 of List I. The rationale of this shift has been given in the write up under the latter Entry (Paragraph 3.7).

Entry 27 :

3.73. Entry 27 has been modified to widen its scope to include displaced persons from their original places of residence in all foreign countries and territories as well as from other States and Union Territories. At present Entry 27 covers displaced persons from Pakistan only.

Entry 32-A :

3.74. A new Entry 32-A has been added to accommodate banking shifted from Entry 45 of List I. The rationale of this change is given in the write up under the latter Entry.

Entry 32-B :

3.75. The new Entry 32-B accommodates wholesale marketing of petroleum products and L.P.G. shifted from Entry 53 of List I. The rationale of shifting this subject to the Concurrent List is given in the write up under the latter Entry.

Entry 48 :

3.76. This is a new Entry which shifts residuary powers from the Union List to the Concurrent List. The rationale of this change is given in the write up on Entry 97 of List I.

ANNEXURE I

Suggested Modifications to List I (Union List)

Suggested deletaion indicted in underlined	Suggested substitution/addition indicated in underlined
1	2
2-A. Deployment of any armed force of the Union or any other force subject to the control of the Union or any contingent or unit thereof in any State in aid of the civil power; powers, jurisdiction, privileges and liabilities of the members of such forces while on such deployment.	2-A. Deployment of any armed force of the Union or any other force subject to the control of the Union or any contingent or unit thereof in any State in aid of the civil power at the request of or with the concurrence of that State: determination of terms and conditions of such deployment applicable to all States with the concurrence of the Inter-State Council.
24. Shipping and navigation on inland waterways, declared by Parliament by law to be national waterways, as regards mechanically propelled vessels, the rule of the road on such waterways.	24. Shipping and navigation on inter-State rivers as regards mechanically propelled vessels; the rule of the road on such rivers.

LIST I

(Reference Entry 52)

1. Ferrous and non-ferrous metallurgy (pig iron, sponge iron, steel, aluminium, copper, zinc and lead).
2. Cement.
3. Newsprint.
4. Petroleum refining and natural gas processing.
5. Nitrogenous fertilizers.
6. Petro-chemical basic materials and intermediates.
7. Bulk Drugs.
8. Steam and hydro turbines.
9. Power boilers.
10. Transformers (33 KVA and above)
11. Locomotives.
12. Railway coaches and wagons.
13. Naval ships, oil tankers and cargo vessels above 10,000 tonnes DWT.
14. Communications equipment.
15. Defence weapons and materials.
16. Atomic energy materials and equipment.

LIST I—APPENDIX B

(Reference Entry 54)

1. Coal and lignite.
2. Petroleum and natural gas.
3. Atomic energy minerls.
4. Ferrous and non-ferrous metal ores.
5. Lime stone.
6. Dolomite.
7. Mica.
8. Precious stones, such as diamond, emerald garnet ruby, saphire, topaz, acqurmmine, etc.
9. Fertilizer minerals, e.g., rock phosphate, gypsum, apatite, etc.
10. Precious metals, e.g., gold, platinum, etc.
11. Refractory, paints & pigments minerals, i.e., pyrites, redocnre, yellow ochre, asbestos, celestite, ilimenite, magnesite, rutile, soap stone/ steatite, vermi, culite, zircon, etc.
12. Bese metals, i.e., tin, tungsten, etc.
13. Other industrial minerals i.e., Bantonite, Borax, Diaspore, Flourite, Wallastonite etc.
14. Building & Decorative stones i.e., Granites and Mignatitic gnaisses, basic dykes, marble etc.
15. Ceramic raw materials i.e., Ball clay, china clay, felspar, etc.

ANNEXURE II

Constraints on States' Legislative Autonomy :

4.1. In Chapter 3 suggestions were made for modification of the three lists of the Seventh Schedule (Article 246) towards a more appropriate distribution of legislative powers between the Centre and the States. But even within the area of legislative competence of the States, there are several constraints, some of these very irksome and onerous, on their legislative autonomy. These constraints include the following :—

(1) Inability of the State Legislative Assembly by itself to create or abolish the Legislative Council;

(2) Governor's power to summon and prorogue the House(s) of the State Legislature and to dissolve the Legislative Assembly;

(3) Over-riding jurisdiction of the Union with regard to matters enumerated in the concurrent List;

(4) Parliament's power to enlarge the legislative competence of the Union at the expense of the State's competence by declaring that this is expedient in the public interest or by making the prescribed declaration with respect to particular matters;

(5) Enlargement of legislative jurisdiction of the Union by Constitutional Amendments;

(6) Parliament's power to legislate with respect to matters in the State List;

(7) Governor's powers in relation to the Bills passed by the House(s) of State/Legislature;

(8) President's power in relation to the Bills reserved for his assent;

(9) The requirement in some cases of previous sanction of the President for introduction of a Bill in the House(s) of the State Legislature; and

(10) Power of Parliament to provide for the establishment of additional courts for better administration of laws made by Parliament.

Inability of the State Legislative Assembly to create or abolish the Legislative Council :

4.2. Under Article 169, only the Parliament is competent to create or abolish the Legislative Council of a State, if the Legislative Assembly passes a resolution to that effect by a majority of the total membership of the Assembly and two-third majority of the Members present and voting. The Legislative Assembly, the popularly elected House of the State Legislatives, has no power by itself to create or abolish the Legislative Council, no matter how strong is the support among the Assembly Members for this. The State Government is obliged to approach the Parliament for undertaking the necessary legislation to implement the Assembly resolution.

Governor's Power to Summon and Prorogue the House(s) of the State Legislature and to Dissolve the Legislative Assembly :

4.3. Under Article 174, the Governor has the power to summon and prorogue the House(s) of the State Legislature and dissolve the Legislative Assembly. If this power were to be invariably exercised on the advice of the State Council of Ministers that has the support of the majority of the Members of the Legislative Assembly, the power of the Governor under Article 174 would not in any way constrain or abridge the State's legislative autonomy. Generally, this is, in fact, the practice particularly with regard to summoning and prorogation of the House(s). But there have been instances , particularly with ragard to dissolution of the Legislative Assembly, where the Governor is reported to have exercised this power otherwise than at the advice of the State Council of Ministers, or even in opposition to this advice. Disregard in this case of the advice of a popular majority-supported State Government by an appointee of the Union Executive is a clear infringement of the legislative autonomy of the State.

Over-riding Jurisdiction of the Union with Regard to Matters Enumerated in the Concurrent List :

4.4. Though the States are competent to enact legislation on matters enumerated in the Concurrent List, the Union has the ultimate jurisdiction with respect to these matters. This is because if a law made by the Legislature of a State on a Concurrent matter contains any provision repugnant to the provisions of an earlier law made by Parliament or an existing law with respect to that matter, then, the law made by the State Legislature shall, to the extent of the repugnancy, be void (Article 254). But of the State law has been reserved for and received the President's assent it will prevail in that State [Article 254(2)]. Even in this case nothing shall prevent the Parliament from subsequently enacting any law with respect to the same matter including a law adding to, amending, varying or repealing the law so made by the State Legislature [Proviso to Article 254(2)]. And the latter law shall become void to the extent of repugnancy to the new law enacted by Parliament (Article 254).

Parliament's Power to Enlarge the Legislative Competence of the Union at the Expesne of the State's Competence :

4.5. Several Entries in the three Lists in the Seventh Schedule are so worded as to empower the Parliament to enlarge the legislative competence of

the Union at the expense of the States competence by declaring by or under the law enacted by it that this is expedient in the public interest or by making the prescribed declaration with respect to particular matters including these Lists. A well-known example of enlargement of Union's jurisdiction in this manner, as explained above in the previous chapter in the write up on Entry 52 of List I, is Industries. Industries has become virtually a union subject in substantial violation of the intentions of the framers of the Constitution. Other Entries of List I under which Union's jurisdiction can be similarly extended by the Parliament include the following : 7, 23, 24, 27, 53, 54, 56, 62, 63 , 64, and 67. The affected Entries in the State List include 12, 13, 17, 22, 23, 24 and 50.

Enlargement of Legislative Jurisdiction of the Union by Constitutional Amendments :

4.6. The legislative competence of the Union may be enlarged at the expense of the State's jurisdiction by adding more matters to the concurrent list by shifting these from the State List or otherwise. This was done in a big way by the Forty-second Amendment undertaken in 1976 taking advantage of the abnormal situation created by the Emergency. The subjects shifted to or newly added to the Concurrent List under this Amendment included the following :—

(i) Administration of justice; constitution and organisation of all courts, except the Supreme Court and High Courts (Entry 11-A of List III).

(ii) Forests (Entry 17-A).

(iii) Protection of wild animal and birds (Entry 17-B).

(iv) Population control and family planning (Entry 20-A).

(v) Education etc. (Entry 25).

(vi) Weights and measures except establishment of standards (Entry 33-A).

4.7. In a few cases, the jurisdiction of the Union has been enlarged by adding to List I itself. The Forty-second Amendment (1976) added Entry 2-A to the Union List. This Entry covers the deployment of any armed force of the Union or any other force of the Union or any other force subject to the control of the Union in any State in aid of civil power. The Forty-sixth Amendment (1982) has put the consignment tax (in respect of a consignment that takes place in the course of inter-state trade or commerce) in the jurisdiction of the Union by the newly added Entry 92-B. Such additions to the Union List further accentuate the jurisdictional imbalance between the Union and the States.

Parliament's Power to Legislate with respect to the matters in the State List :

4.8. Parliament has power to legislate with respect to a matter in the State List :

(i) if declared to be necessary or expedient in the national interest by a resolution of the Council of States supported by two-thirds majority of the members present and voting (Article 249);

(ii) if a proclamation of Emergency is in operation (Article 250);

(iii) for two or more States by their consent (Article 252); and

(iv) to give effect to international agreements (Article 253).

4.9. In case (i) a resolution passed by the Council of States has initially a maximum validity of one year, but it can be renewed again and again without limit in the same manner for further one-year periods at a time [Article 249(2) with its proviso].

4.10. Article 249 and 250 do not take away the legislative competence of the State Legislature, but if any provision of a law made by a State Legislature is repugnant to any provision of a law made by Parliament which Parliament is competent to make under these Articles, the law made by the Parliament shall prevail and the law made by the State Legislature shall, to the extent of the repugnancy, be inoperative so long as the law made by Parliament continues to have effect, that is, up to six months after the resolution of the Council of States ceases to be in force or the Proclamation of Emergency ceases to be operative (Article 251).

4.11. In case (iii), an Act passed by Parliament shall not as respects any State to which it applies, be amended or repealed by an Act of the Legislature of that State. Only the Parliament may do this in the same manner in which it enacted it [Article 252(2)].

Governor's Powers in Relation to the Bills passed by the House(s) of States Legislature :

4.12. When, after being passed by the House(s) of the State Legislature, a Bill is presented to the Governor for his assent, he may (i) assent to the Bill, or (ii) withhold his assent, or (iii) if it is not a money Bill return it to the House (s) of State Legislature for reconsideration and recommend some amendments in it, or (iv) reserve the Bill for the consideration of the President. There does not seem to have been any instance of the Governor withholding his assent (case ii) as a final action on the Bill. Action (iii) would only delay the enactment of the Bill temporarily for if the Bill is passed again by the House(s) with or without amendments, the Governor shall not withhold assent from it (First Proviso to Article 200). It is the Governor's power to reserve the Bills for the consideration of the President, which if exercised otherwise than at the advice of the State Council of Ministers, involves a major effective constraint on the State's Legislative autonomy.

4.13. There are certain compulsions with regard to reservation of Bills for the consideration and assent of the President (in effect, the Union Council of Ministers). Firstly, it is obligatory for the Governor to so reserve a Bill, passed by the House(s) of State Legislature when, in his opinion, if it became law, it will so derogate from the powers of the High Court as to endanger the position envisaged for it by the Constitution (second Proviso to Article 200). Secondly, where the Bill pertains to a matter enumerated in the Concurrent List, it is normally reserved for the President's assent. This is to ensure that it gets the protection afforded by Article 254(2) mentioned above and does not become void to the extent of

repugnancy to the provisions of an earlier law made by Parliament or an existing law with respect to that concurrent matter. Thirdly, where the Bill provides for acquisition of estates or take over of management of any property for a limited period and other such matter, specified by (a), (b), (c), (d) and (e) under clause (1) of Article 31-A, it is normally reserved for President's assent to secure for it the protection afforded by Article 31-A. Under this Article to law providing for acquisition of estates etc. shall be deemed to be void on the ground of its being violative of the Fundamental Rights conferred by Article 14 and 19. But where such a law has been enacted by a State Legislature, the protection afforded by Article 31-A, clause (1) shall not be available unless such law has been reserved for and received the President's assent. All land reform legislation is reserved for the President's assent to secure protection under Article 31-A (1). Article 31-C affords similar protection to laws giving effect to the policy of the State towards securing directive principles of State policy laid down in Part IV of the Constitution. But, in this case too, this protection shall be available to a law enacted by a State Legislature only if it has secured the assent of the President (Proviso to Article 31-C). All such laws enacted by the State Legislature are also invariably reserved for President's assent.

4.14. Governor's powers in relation to the Bills passed by the House(s) of State Legislature will not be much of a constraint on State's legislative autonomy if, as the constitutional head of the State, he were to exercise all these powers always on the advice of the State Council of Ministers, just as the President does with respect to all matters including the Bills passed by Parliament. But this does not seem to be invariably the case.

In some cases, particularly when a party other than the ruling party at the Centre was at the helm of affairs in the State, the Governor is reported to have reserved the Bills for the President's assent without or even against the advice of the State Council of Ministers, even when these Bills were such as he would not be obliged, under the Constitution, to reserve for President's assent. Such actions of the Governor surely do constitute an unjustifiable constraint on the States' legislative autonomy.

President's Powers in Relation to the Bills Reserved for his Assent

4.15. The President may or may not assent to the Bill reserved for his assent. In the latter case, he may withhold his assent or, where the Bill is not a Money Bill, return it, through the Governor, and require that the House(s) of State Legislature shall reconsider it within a period of six months, particularly the amendments to it suggested by him. If the Bill is again passed by the House(s) with or without amendment, it shall be presented again to the President for his assent. This time too, the President may or may not give his assent to the Bill. The Constitution prescribes to time limit for the President to give his decision. Nor are there any guidelines, criteria or conventions relating to the disposal of the Bills reserved for President's assent. This gives the Union Council of Ministers the Power to delay and veto the Bills passed by the House(s) of State Legislature, thereby enabling the ruling party at the Centre to thwart and frustrate the policies and programmes of the ruling party in the State as reflected in the Bills passed by the House(s) of State Legislature. The worst affected have been the measures for progressive economic and social reform which impinge on powerful vested interests. This is an intolerable constraint on State's legislative autonomy in a situation where parties other than the ruling party at the Centre are in power in a number of States. This is a major issue of Centre-State relations.

The Requirement of previous Sanction of the President

4.16. Under Article 304(b), the State Legislature may impose such reasonable restrictions on the freedom of trade, commerce or intercourse with or within the State as may be required in the public interest. But the Proviso to clause (b) lays down that no Bill or amendment for this purpose shall be introduced or moved in the Legislature of a State without the previous sanction of the President. The Proviso imposes an unjustifiable restriction on the legislative autonomy of the States. Clause (b) itself guarantees against arbitrary and unjustifiable State interference with the freedom of trade, commerce and intercourse with and within the State by requiring that only such restrictions may be imposed as are reasonable and required in public interest. There should be no need for further restriction on the State's legislative competence to undertake legislation providing for such restrictions.

Power of Parliament to provide for the Establishment of Additional Courts for Better Administration of Laws made by Parliament.

4.16-A. Under Article 247 Parliament may by law provide for the establishment of any additional courts for the better administration of laws made by Parliament. Such special courts were set up in Punjab in the post-Blue Star Operation period under the Disturbed Areas Act. These Courts are a departure from the normal judicial structure envisaged by the Constitution where the same courts administer all laws whether made by Parliament or the State Legislature. There should be no justification for setting up such courts in normal non-Emergency times. But this is permitted under Article 247 which makes no such distinctions.

Measures for Fuller Legislative Autonomy of the States

4.17. In keeping with the requirements of a genuine federal state structure, measures are suggested below for fuller legislative autonomy of the States.

4.18. Article 169 may be amended to empower the Legislative Assembly, the popularly elected House of the State Legislature, to itself create or abolish the Legislative Council by 'law, passed by a majority of the total membership of the Assembly and by a two-third majority of the Assembly members present and voting.

4.19. Article 174 may be amended to provide that as long as there is in position in a State a popular Government which has majority support in the Legislative Assembly, the Governor shall exercise his power to summon and prorogue the House(s) of the State Legislature and dissolve the Legislative Assembly on the advice of this Government. The Governor may exercise his discretion in these matters only when this condition is not met, for example, in the following circumstances.

(i) When the Chief Minister is understood by the Governor to have lost majority suppor

in the Legislative Assembly and fails to summon this House within a reasonable period, when so required by the Governor, to establish his continued command of majority support.

(ii) When a Chief Minister, following a defeat in the Legislative Assembly on a substantive issue, advises dissolution of the House and a fresh general election.

(iii) When, as is most unlikely, the Chief Minister fails to advise summoning of the House(s) of State Legislature within six months of the last day of the previous session; and

(iv) When following a general election to the Legislative Assembly or the defeat of the existing State Government in this House, no party obviously seems to command majority support in the House and it is decided to summon the Assembly to indicate who, if any person, has majority support of this House and thus qualifies for appointment as Chief Minister. If in this case the House fails to indicate Majority support to any person, the Governor may on this own prorogue or dissolve this House and advise imposition of President's rule, to be followed by a fresh General election as soon as possible.

4.19 A The most effective way to minimise the abridgement of legislative outonomy of the States in the area of their competence implied in the overriding jurisdiction of the Union with regard to the Concurrent List is to limit this list to only those matters where with regard to the major aspects of these matters it is imperative to have a common law applicable to all the States, even if with regard to minor aspects of these matters the States may each enact its own legislation in the light of their special circumstances and requirements. All other matters now included in the Concurrent List may be transferred to the State List. It is this approach that has been followed in the previous chapter in suggesting modifications to the concurrent and other Lists.

4.20 The States' legislative competence with regard to the Concurrent List may be reinforced by providing, by a constitutional amendment, that whenever the Union proposes to legislate on a concurrent matter, it shall be obligatory for it to consult seriously, and not in a mere perfunctory manner, the States and to secure the approval of the majority of them to the proposal. If the majority of the States disapprove of the proposal, the Union will need to recast it taking into account the States' views so as to secure approval of a majority of States for it. Otherwise the proposal shall be dropped.

4.21 A possible alternative approach to safeguarding the competence of the States with regrd to the Concurrent List may be that, though prior genuine consultation is made obligatory, approval of the proposed legislation by a majority of the States is not insisted upon. Instead States which do not approve of it are excluded from the purview of this legislation. This approach is inappropriate as it goes against the very logic mentioned above of putting matters in the Concurrent List instead of the State List. For the same consideration it will be inadvisable as is sometimes suggested, to put a law enacted by a State on a Concurrent matter, which receives the President's assent under Article 254(2), outside the purview of the proviso to this clause. This will mean that a State law which has thus received President's assent under Article 254(2) shall prevail in that State not only against an existing law enacted by Parliament on the same matter, but even against a law which Parliament may enact in the future on this matter. This suggestion, if accepted, will mean that laws made by Parliament in the future on the same matter after consultation with the States and securing concurrence of a majority of them will be applicable to other States but not to the State where an earlier law enacted by the State legislature on the same matter had received President's assent under Article 254(2). This defeats the very logic of Union legislation on a concurrent matter.

4.22 The Parliament's power to enlarge the legislative competence of the Union at the expense of the States jurisdiction under several Entries of List I by making by or under law the prescribed declaration may be reduced to the minimum by redrafting the maximum number of such Entries so as to make them no longer subject to any such declaration. The modifications to several Entries in List I suggested in Chapter 3 above have kept this consideration in view. In this connection reference may be made to the suggested modification in respect of Entries 24 30, 52, 53, 54 and 63 of List I.

4.23 There will be nothing wrong it by a Constitutional Amendment a particular matter is transferred from the jurisdiction of the States to that of the Union when new developments in the Indian economy, society or polity fully justify this. But Constitutional Amendments of the Kind undertaken as part of the motivated drive of the country's dominant supra-national forces to undermine the jurisdiction and significance of the States as the homelands of different emerging and emerged Indian nationalities by converting the country increasingly into an essentially unitary state must be resisted and made more difficult. The ultimate safeguard against such amendments necessarily has to be the strong political awareness of the electorate with regard to the true significance of such amendments, reinforced by the prevalence of a climate of freedom, rule of law and cooperative federalism. But it will also be necessary to amend Article 368 to provide for greater say to the States in Constitutional Amendments. As Article 368 stands at present the Parliament can amend the Constitution in general by itself by each House passing the Bill for the purpose by a majority of the total membership of the House and a majority of not less than two-thirds of the Members of that House present and voting. The President shall give his assent to a Bill so passed. It is with regard to a few specified parts of the Constitution, including the Lists in the Seventh Schedule, that the Amendment also requires ratification by not less than one-half of the States. The States may be allowed greater say in Constitutional Amendments by providing, by Amendment of Article 368, that :

(i) The Constitutional Amendments in general shall require also ratification by not less than one-half of the States; and

(ii) The Amendment of specified Articles pertaining to the basic structure of the Constitution shall require ratification by not less than two-thirds of the States.

4.24 Article 249 which empowers the Parliament to legislate with respect to a matter in the State List if declared to be necessary or expedient in the national interest by a resolution of the Council of States by two-thirds majority must be omitted. The Council of States is, in fact, not a representative of the States as such in the manner the U.S. Senate is. Whereas all States in U.S.A., irrespective of their size or population, have equal representation (2 members each) the relative representation of States in the Council of States is heavily weighted by their respective population. U.P. alone has a larger representation (34 members) in this House than 10 other States (31 members) including Assam (7), Punjab (7), Haryana (5), J&K (4), Himachal Pradesh (3), M nipur (1), Nagaland (1) Tripura (1), Meghalaya (1) and Sikkim (1). In the event the relatively smaller States, which number almost one-half of the total St tes, count for little in passing such resolutions of the Council of States. Indeed, a resolution of the Council of States can be passed by two-thirds majority even if all the members from 14 States (almost two-thirds of the total number of States) including Kerala (9), Orissa (10), Rajasthan (10) and Gujarat (11) besides the 10 States mentioned above, unanimously vote against it. Such a resolution cannot truly be considered a decision of the States as such. If there is any aspect of a matter in the State List where the Council of States has to be called upon again and again to pass the requisite resolution to enable the Parliament to legislate on it, it would be preferable to shift it by constitutional amendment to the Concurrent List so that the Union or the States, as the situation may require from time to time, may legislate on it. The case for omitting Article 249 is, indeed, very strong. As a *sequel* to this, references to Article 249 in Article 251 shall need to be omitted.

4.25 In order that the Council of States may be broadly what its name suggests, its composition needs to be modified. It may be suggested that the 15 States with larger than ten million population in 1971 may be given equal representation in the Council of States, namely, 14 Members each. J&K and Himachal Pradesh, with a population between 3 and 10 million, may be given 5 Members each. Tripura, Manipur and Meghalaya with a population between one and three million may have 2 Members each. The representation of Nagaland and Sikkim who had less than one million population might be one Member each.Delhi, Pondicherry, Mizoram and Arunachal Pradesh may continue to have one Member each. The total membership will remain unchanged at 232.

4.26 Article 252 which empowers the Parliament to legislate for two or more States on a matter in the State List, with the consent of their legislatures must also be omitted. The States must not be encouraged or pressurised to surrender their legislative jurisdiction to the Union. They must themselves enact legislation on matters in the State List. If coordination between two or more States is necessary with respect to legislation on a particular matter, this may be arranged through the medium of the Zonal Council or the Inter-State Council. The Union might also help by framing model legislation on that matter for the guidance of the States.

4.27 A possible, though less satisfactory, alternative to omission of Article 252 may be to substitute the following for the present clause (2) of Article 252:

> "An Act so passed may be amended or repealed only by an Act of Parliament passed or adopted in like manner but as respects any State to which it applies it may also be amended or repealed by an Act of Legislature of that State".

4.28 As mentioned above, the Governor's powers in relation to the Bills passed by the House(s) of State Legislature will not be a significant constraint on the States' Legislative autonomy if he were to exercise all these powers, including those with regard to reservation of Bills for the President's assent, on the advice of the State Counil of Ministers. To this end, it shall be necessary to omit the second proviso to Article 200, and to put in its place, the following proviso :

> "Provided further that the Governor shall exercise his functions under Article 200 in accordance with the advice of the State Council of Ministers".

4.29 If a law inacted by the legislature of a State goes beyond the latter's powers under the Constitution, it is for the Courts to nullify this law by declaring it *ultra vires* of the Constitution. If, on the other hand it is a valid but improper law, it is for the electorate to protest against it and force an amendment or even repeal of it. There is no justification for empowering the Union to sit on judgement on it whether with regard to its validity or propriety by making it obligatory for the Governor to reserve it for the President's assent, who may withhold it on the advice of the Union Council of Ministers.

4.30 After the Amendment suggested above, the Governor shall not reserve a Bill passed by the House(s) of State Legislature for the consideration of the President except on the advice of the State Council of Ministers. The latter may itself advise reservation of a Bill for the President's assent if it pertains to a Concurrent matter, or to acquisition of estates etc., or to giving effect to the Directive Principles of State Policy, with a view to securing the protection for it that will be available, as mentioned above, under Article 254(2), or Article 31-A, or Article 31-C, respectively, if it receives the President's assent. These cases are on a different footing than the generality of Bills passed by the State Legislature in its area of competence. President's assent is not obligatory in these cases, but it is being sought to secure special protection for the validity of the particular legislation. If the State Government does not mind foregoing this special protection, it does not have to advise the Governor to reserve the Bill for the President's assent.

4.31 It is sometimes suggested that the above protection should be available even without the President's assent. The mere fact of adoption of the Bill by the State Legislature may be enough to secure it. The above suggestion has far reaching implications. If this suggestion is conceded with regard to State Legislation pertaining to Concurrent matters this

will in fact imply that under Article 254(2) the earlier legislation enacted by the Parliament on the same matter will become void to the extent of repugnancy with the States legislation now enacted. In other words the State Legislature and not the Parliament will have the over-riding jurisdiction with regard to concurrent matters even if, as suggested above, the concurrent List may be drastically reduced to the few matters with respect to the major aspects of which it is imperative to have a uniform law applicable to all the States. This will be contrary to the very logic of including a matter in the Concurrent List as against its inclusion in the State List.

4.32 The present provision is the other extreme position where progressive social measures mooted by some State Governments within the competence of the State Legislature have been greatly delayed and, in the end, even set at naught as a result of the President withholding his assent on the advice of the Union Council of Ministers dominated by, or under pressure from, powerful vested interests.

4.33 It is necessary to find a via media with regard to President's response to Bills reserved for his assent by the Governor under Article 31-A or 31-C so that valied legislation sponsored by a State Government, if it is not altogether out of line with the prevailing ethos, may secure without undue delay the protection under these Articles. Perhaps a reasonable and a widely acceptable way to ensure this would be to provide that President's assent shall continue to be necessary to secure protection for State Legislation under Articles 31-A and 31-C, but with respect to such legislation, the President shall be guided by the advice of the Inter-State Council and not that of the Union Council of Ministers. Furthermore, there shall be a set time limit, say one year, for the President to give a decision with regard to a State Bill reserved for his assent. If no decision is forthcoming within this period, the Bill may be deemed to have secured President's assent.

4.34 The proviso to clause (b) of Article 304 may be omitted so that no previous sanction of the President is required for introducing in the House(s) of State Legislature a Bill or amendment for the purpose of clause (b). This proviso imposes and unjustifiable restriction on the legislative autonomy of the States. Clause (b) itself guards against arbitrary and unjustifiable State interference with trade, commerce and intercourse within and with the State by requiring that only such restrictions may be imposed as are reasonable and required in public interest. If the Bill or amendment fails to satisfy these criteria, it will surely be open to the courts to set it aside as unconstitutional. There is no need for further restrictions on the competence of the State Legislature to undertake legislation for the purpose of clause (b).

4.35 Parliament's power under Article 247 to provide by law for the establishment of any additional courts for the better administration of laws made by Parliament or of any existing laws with respect to matters in the Union List must be restricted to the period when a proclamation of Emergency is in operation, or some other very abnormal situation which, for the reasons that must be explicitly stated and formally accepted by the Inter-State Council as reasonable, necessitates establishment of the special courts. In normal times, none but the ordinary course must administer all laws whether made by Parliament or by the State/Union Territory Legislatures.

4.36. The State must have a say in all Constitutional Amendments under Article 368. In general, a Constitutional Amendment must require ratification by a majority of the States. Amendments pertaining to specified Articles, which must include in particular the Articles bearing on the Union-State Relations, must require ratification by at least two-thirds of the States.

ROLE OF THE GOVERNOR

5.1 It is generally held that smooth functioning of a Parliamentary system of government is facilitated if the Constitution provides for a constitutional head of the State. Since the Indian Constitution has opted for this system of government at the Union and the State levels a provision has been made for a constitutional head at both these levels, namely the President and the Governor, respectively.

Role of the Governor

5.2 The primary role of the Governor ought to be to function as the Constitutional Head of the State. Dr. Ambedkar described him as "an ornamental functionary". *The Supreme Court has also expressed a similar view of the Governor's Office. In Hargobind Pant versus Raghulal Tilak and others. **it held that the Governor's office is an independent constitutional office which is not subject to the control of Government of India. In Maru Ram versus Union of India, @ it described the Governor as the "shorthand expression" for the State Government.

5.3. In addition to this primary role as the Constitutional Head of the State, the Governor is (i) an integral part of the State Legislature (Article 168), (ii) a link between the State and the Union, and (iii) an agent of the President, for instance under President's rule in the State.

Functions as the Constitutional Head

5.4 As the Governor is the Constitutional Head of the State, the executive power of the State is vested in him [Article 154(1)] and business of the Government of the State is carried on in his name (Article 166). The executive power of the State is coextensive with its legislative power (Article 162). The Governor's executive power is exercised by him on the aid and advice of the Council of Ministers, who shall be collectively responsible to the legislative Assembly of the State, except in so far as he is by or under the Constitution required to exercise his functions in his discretion [Article 163(1)]. In case of doubt, the Governor is empowered to himself take the final decision whether any matter is or is not the one in which he is so required to act in his discretion [Article 163(2)]. Again, as the Constitutional Head of the State, the Governor appoints the Chief Minister and, on the latter's advice, the other Ministers (Article 164). The Chief Minister is required to keep

* Constituent Assembly Debate, Vol. III p, 468.
** AIR, 1979, SC 1109.
@ AIR, 1980, SC 2147 (p. 2169).

him informed of the decisions of the Council of Ministers and proposals for legislation, and provide any information on these that the Governor may require. The Governor may also require the Chief Minister to place any decision of an individual Minister before the Council of Ministers [Article (167)].

5.5 In keeping with his primary role as the Constitutional Head of the State, the Governor should act in completely non-Partisan manner. But the practice has often been at variance with this precept. The Governor, particularly if he has been in active politics previously, or if he intends to (re)enter active politics in the future, has in many cases transgressed his proper role and has functioned in a partisan manner. Allegations of partisan conduct have been particularly common with regard to Governors who had been actively associated with the political formation that has exercised power at the Centre almost throughout the post-independence period.

Usual Areas of Partisan Conduct :

5.6 The allegations of partisan conduct by the Governor usually pertain to his following actions :

(i) appointment of the Chief Minister in a situation when no single political party commands majority support in the Legislative Assembly;

(ii) adoption of very questionable methods, which are in keeping with neither the dignity of the elected representatives of the people nor with the role of the Governor as the non-partisan constitutional head of the State, to verify claims of majority support advanced by different persons to secure appointment as Chief Minister;

(iii) dismissal of Council of Ministers without giving the Chief Minister a reasonable opportunity to establish his majority support in the Legislative Assembly on the floor of the House;

(iv) summoning and prorogation of the House(s) of State Legislature and dissolution of the Legislative Assembly;

(v) reservation of bills passed by the House(s) of State Legislature for the assent of the President (under Article 200);

(vi) making a report to the President under Article 356 to the effect that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution;

(vii) the action recommended in the above report, particularly whether the Governor views it as a temporary break, with the Legislative Assembly kept in suspended animation, or as a rather extended go by to responsible Government, involving an immediate dissolution of the Assembly without an indication as to the timing of the fresh elections to this House;

(viii) conduct of State administration, as an agent of the President, under President's rule;

(ix) appointment of the Vice-Chancellor of a State University;

(x) allowing the Raj Bhavan to become an office, a Committee room and a guest house of the ruling party at the Centre for hatching, organising and executing plots and actions aimed at embarrassingy discrediting, subverting and eventually dismissing the State Government for the benefit of that party; and

(xi) in general, functiong primarily as an agent of the Union Executive rather than as an independent Constitutional Head of the State who in accordance with the letter and spirit of the Constitution offers due cooperation to the State Government irrespective of its party complexion.

5.7 Partisan conduct by the Governor in violation of the spirit of the Constitution has been by far the most important factor for the widespread misgivings, and in some cases even bitter hostility, which individual Governors as well as the office of the Governor has aroused among the non-congress political parties. Cooperative federalism requires that effective constitutional safeguards must be provided to ensure that the Governor's office is altogether free from political controversy.

Appointment and Tenure of the Governor

(a) The Existing Provisions :

5.8 The Governor is appointed by the President. In this, as in almost everything else, the President is guided by the advice of the Union Council of Ministers. Thus the Governor is, infact, an apointee of the Union Executive. For some years after the commencement of the Constitution, the Chief Minister of that State was usually consulted on the matter, but after Mrs. Indira Gandhi became the Prime Minister this practice was given up. A possible explanation for the discontinuance of this practice seems to be that in the earlier years when the Congress Party was in power at the Centre as well as in almost all the States, such consultation was essentially an entra-party affairs, but it took on a different complexion when non-Congress parties came to power in several States. In the changed circumstances, the Centre began to observe only the letter of the Constitution, which did not require prior consultation with the Chief Minister of the State, and abandoned the healthy convention that had been developed in this respect.

5.9 A Governor is appointed for a five-year term [Article 156(3)] but holds office during the pleasure of the President [Article 156(1)]. In other words, he can be removed by the President (read : Prime Minister) at his pleasure before the expiry of this term. At least in one case, the Governor was in fact virtually removed prematurely by the President.

5.10 It is permissible for a person to be appointed a Governor of more than one State (Proviso to Article 153). This provision is rather inappropriate. It suggests that the States are mere administrative subdivisions of a unitary state structure and not Constituent states of an essentially federal polity. In several cases, the Governor of a State has been

transferred from one State to another for the rest of his five-year term more or less as a Deputy Commissioner may be transferred at any time from one District to another. This practice detracts from his primary role as an independent Constitutional Head of a State. It also connotes that the States are essentially administrative divisions of a unitary State.

5.11 It is permissible to combine the office of Governor of a State with that of administrator of an adjoining Union Territory. In this case he shall exercise his functions as administrator independently of his Council of Ministers [Article 239(2)]. The Governor shall not hold any other office of profit or be a member of any House of Union or State Legislature (Article 158).

(b) The suggested Provisions :

5.12 The mode of appointment of the Governor is generally considered a crucial factor towards ensuring that he functions in a non-partisan manner in keeping with his primary role as the constitutional head of a State. The fact that, under the Constitution, the Governor is in fact an appointee of the Union Council of Ministers (rather of the Prime Minister) and holds office during their (rather Prime Minister's) pleasure is not conducive to his functioning in a non-partisan manner, more so when most often the person chosen is a former or a would be active politician. It is sometimes suggested that to minimise the probability of the Governor functioning primarily as an agent of the Centre rather than as the Constitutional Head of a State, the Constitution may be amended to provide that the Governor shall be appointed by the President on the advice of the Chief Minister, or out of a panel submitted by the Chief Minister. But under this provision, the probability of the Governor functioning in a partisan manner, this time in favour of the ruling party in the State, is as high as under the present position except that now it is the ruling party at the Centre that is favoured. Perhaps, the most appropriate course would be to provide that the Governor shall be appointed by the President out of three names submitted by the Chief Minister of the State chosen from a panel of names considered suitable for this office maintained by the Inter-State Council and up-dated annually by it. To conform to the Constitutional requirement under Article 74 that the President shall go by the advice of Union Council of Ministers in the exercise of his functions, the modality of involving the Inter-State Council may be that on the receipt of the three names submitted by the Chief Minister out of the panel maintained by the Inter-State Council, the Union Executive may refer these names to the Inter-State Council and invariably go by the advice received from the Council in advising the President with regard to the appointment of the Governor. Thus the Union Executive, through both the President and the Inter-State Council (which will have the Prime Minister as its Chairman), the States collectively, and the Chief Minister of the concerned State will all be assoiciated with the appointment of the Governor. Article 155 relating to the appointment of the Governor may be amended to the extent necessary.

5.13 It is of the utmost importance that only persons of high calibre, integrlty and public stature usch as could be relied upon to rise above party and political affiliations and discharge their functions as Governor strictly in accordance with the letter and spirit of the Constitution may be included in the panel. Political awareness and propensity to political fair play may be considered essential qualifications for this office. Persons who have been active in politics need not be debarred from inclusion in the panel if they have the requisite qualifications, character and personality. There is no case for making the Governor's office, as it sometimes suggested a monopoly of persons who have distinguished themselves in the professions.

5.14 The Governor's terms of appointment must be such as should free him from both temptation and intimidation from any quarter. To this end, he should not normally be disturbed before the expiry of his five-years term. There should be no transfer to another State. The President shall not remove him except on the recommendation of Inter-State Council. If the Union Government or the State Government feel that his conduct as Governor shows him to be unequal to, or unsuitable for, this high office, they may move the Inter-State Council for his removal, but the Council alone should be competent to advice the President in this regard. There should be no second term for a Governoer whether in the same State or in another State.

Exercise of Discretion by the Governor :

5.15 Article 163 requires the Governor to go by the aid and advice of State Council of Ministers headed by the Chief Minister in the exercise of his functions "except in so far as he is by or under this constitution required to exercise his functions or any of them in his discretion". There was a strong demand in the Constituent Assembly that in clause 143 of the Draft Constitution (which later became Article 163 of the Constitution) the provision quoted above providing for exercise of discretionary power by the Governor be deleted. In defence of this provision Shri T.T. Krishnamachari, Shri Alladi Krishanswami Ayyar and Shri B.R. Ambedkar clarified that the scope for exercise of discretion under this clause was limited to only such matters where, under some other Article of the Constitution, the Governor was specifically empowered to Act in his discretion. Dr. Ambedkar explicitly clarified that "It is not a general clause giving the Governor power to disregard the advice of his ministers in any matters in which he finds he ought to disregard." He said that he would have very readily agreed to mention under this clause the specific Articles which come within the scope of this Article but, as the consideration of the Draft Constitution had not at the time been completed, this was not possible.

5.16 There are, indeed, very few provisions in the constitution where the Governor is specifically required to exercise his discretion. These mostly relate to the north-eastern States. Article 371 1(A)(b) makes the law and order in Nagaland the special responsibility of the Governor of that State. Article 371A(1)(d) pertains to making of rules for the Regional council for the Tuensang District of Nagaland. Article 371A (2)(b) relates to allocation of any money provided by the Government of India to the Government of Nagaland for the whole State between the Tuensang District and the rest of the State. Article 371A(2)(f)

relates to final decision for all matters relating to the Tuensang District. Schedule VI, Para 9(2) covering the States of Assam, Meghalaya, Tripura and the Union Territory of Mizoram pertains to sharing of royalty on minerals between the State Government and the District Council (of an Autonomous District). In all these matters the Governor is specifically required by or under the Constitution to exercise his discretion. If the scope of Governor's discretion were limited to only these cases, it would not have been an issue of national importance.

5.17. The discretionary power of the Governor under Article 163(1) has become a major issue of Centre-State relations because in practice, in disregard of the clarification given by the Constitution makers to the Constituent Assembly, the scope of this power has been given a wider interpretation. It has been claimed that the expression "by or under this Constitution" in Article 163(1) covers "all situations in which the power to exercise discretion is either expressly mentioned or necessarily implied in the relevant Articles". Governors have been actually acting on this wider interpretation. This was made possible by the fact that under clause (2) of Article 163, the Governor is empowered to decide himself finally in his discretion whether or not any matter is one with respect to which he is by or under this Constitution required to act in his discretion and this decision cannot be challenged in any court of law. The Supreme Court has also upheld the wider interpretation. In Shamsher Singh *versus* State of Punjab (AIR 1974 SC. 2192) it held that in some cases the Governor has power to act in his discretion as a matter of necessary implication. The Supreme Court has, however, interpreted 'at his discretion' to have the same meaning as was attached to it "in his individual judgement" under the Government of India Act 1935. In other words, with respect to matters which come within the scope of exercise of discretion by the Governor, whether by express provisions or by necessary implication, the Council of Ministers are not excluded from giving advice but the Governor is not obliged to follow this advice. Some of the important matters where the Governor is commonly considered to be competent to act in his discretion are : appointment of the Chief Minister [Article 164(1)] dissolution of the Legislative Assembly [Article 174(2)(b)], reservation of bills for the consideration of the President (Article 200): promulgation or ordinances during recess of Legislature (Proviso to Article 213); and imposition of President's rule on the State in case of failure of constitutional machinery there [Article 356(1)].

5.18. The wider interpretation of the scope of discretionary power by the Governor, particularly, when he is protected in this by Article 163(2), necessarily implies a potential threat to the autonomy of States in their specific sphere and the right of their people to be governed by a democratic responsible Government. The potential threat has become an actual attack on States' autonomy and democratic Government on many occasions. It does not seem feasible to remove this threat by just omitting the provision "except in so far as he is by or under this Constitution required to exercise his functions or any of them in his discretion" as there may be some occasions when it will be necessary and legitimate for the Governor to exercise his discretion. There may then be two ways to safeguard States' autonomy and responsible Governments against misuse of discretionary power by the Governor whether on his own or at the behest of the Central Government. These are :—

(i) The Courts, and not the Governor himself, may be empowered to determine finally whether or not a matter is one with respect to which the Governor is empowered, whether by express provision or by necessary implication, to act in his discretion; and

(ii) Under all the Articles where there is an apprehension of the Governor unjustifiably exercising his discretion on the ground that the Article empowers him to do by necessary implication, the particular Article may be amended to expressly exclude the exercise of discretion by the Governor. This is the approach adopted with respect to the matters discussed below.

5.19. Article 163 should expressly provide that the Governor must always exercise his discretion in public interest. Discretionary power must never be construed as arbitrary power or be exercised *mala fide*. It must be so exercised as to subserve the purpose for which discretionary power has been conferred. The Governor must not interpret his discretionary power as the authority to set up a sort of parallel regime with regard to functions that are within the purview of this power. Instead, he should strive even with regard to these functions to act in harmony with his Council of Ministers to the maximum extent it might be possible consistant with due discharge of these functions.

Appointment of Chief Minister

5.20. The Constitution as well as the political practice in India must unambiguously emphasize that, as the Constitutional head of a State , the Governor's function under Article 164 is to secure a Council of Ministers which commands majority support in the Legislative Assembly and not to manoeuvre a particular party into office. The ruling party at the Centre must itself actively discourage any such predilections on the part of the Governor. Indeed blatant indulgence in such partisan activity should be considered by the Inter-State Council a sufficient ground for requesting the President for removal of the errant Governor. To the same end , Article 164 may lay down a specific procedure for appointment of the Chief Minister somewhat on the following lines :

(1) When a single political party or a reasonably stable grouping of political parties unquestionably commands majority support in the Legislative Assembly, the leader elected by this party or grouping of parties shall be appointed the Chief Minister by the Governor. Other Ministers shall be appointed by the Governor on the advice of the Chief Minister.

(2) When no single political party or a grouping of political parties unquestionably commands majority support in the Legislative Assembly, the Governor shall, acting on his own, summon this House for indicating whether any

person has majority support in the House. The House may do this by approving a formal motion of confidence in a person by absolute majority of the members present and voting. The person thus shown to have majority support in the House shall be appointed the Chief Minister by the Governor. Other Ministers shall be appointed by the Governor on the advice of the Chief Minister. The Governor shall not under any circumstances take on himself the task of determining the veracity of claims of majority support in the Assembly that may be put forth by different persons to secure appointment as Chief Minister. In case of doubt, the issue of majority support in the Assembly must always be decided by a vote of the Assembly taken by the Speaker.

(3) If, in case 2, the Legislative Assembly fails to indicate majority support for any person by absolute majority of the Members present and voting within a prescribed period, the Governor may on his own dissolve the Legislative Assembly towards holding a fresh election to this House. The existing Council of Minister if any, shall act as a care-taker Government till, after the election, a new Council of Ministers take Office.

5.21. If a fresh election is not feasible in the near future, or no Council of Ministers is in office at the time, the Governor may recommend President's rule on the ground that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution [Article 356(1)]. A fresh election to the Legislative Assembly shall be held as soon as possible towards restoring popular Government in the State.

Dismissal of the Chief Minister

5.22. The Governor shall not dismiss a Council of Ministers under Article 164 on the ground that it no longer has majority support in the Legislative Assembly without giving the Chief Minister a reasonable opportunity to establish his continued majority support by securing a vote of confidence in the Assembly. In this matter, the Governor shall not act on his own subjective judgement. Nor shall he adopt any other method to ascertain whether or not the Council of Ministers continues to have majority support in the Assembly.

5.23. A Minister shall be dismissed on, and only on the advice of the Chief Minister.

Reports to the President (a) Under Article 356 (1)

5.24. With regard to the Governor's report to the President under Article 356(1), it is necessary to provide by amendment of the Constitution that, before submitting his report to the President, he shall communicate to the Chief Minister the grounds which suggest to him that a situation has arisen in which the government of the State cannot be carried on in accordance with the provisions of the Constitution and give him a reasonable opportunity to give his comments on the points raised. If the Governor is not satisfied with these comments, he may forward his report to the President, enclosing with it the comments offered by the Chief Minister. The Governor's report to the President (together with its enclosure) shall be made public along with the announcement of the President's decision on this report. These provisions should go a long way towards restraining the Governor from making a biased report to the President and preventing the Union Executive from meeting out an unwarranted and high-handed treatment to a popularly elected State Government.

5.25. The President is not obliged to take action under Article 356(1) only on receipt of the report from the Governor. He may do this also when he is otherwise satisfied that a situation of costitutional breakdown has arisen in a State. In other words he may take action *suo moto*. The obligation to communicate to the Chief Minister in advance of action under Article 356(1) the grounds which suggest that a situation of a Constitutional breakdown has arisen should also apply to this case.

5.26. The procedure suggested above is in line with the law laid down in some of the recent decisions of the Supreme Court such as : Mohinder Singh Gill *Vs.* Chief Election Commissioner,* S.L. Kapur *Vs.* Jagmohan, **and A.K. Roy *Vs.* Union of India.@

5.27 These decisions seem to imply that the principle of natural justice should be applicable also to cases of suppression of the State Government and the State Legislature under Article 356(1). In order to remove any doubt in this respect, it will be necessary to make an express provision for the above procedure under Article 356(1). The right of the people of a State to be governed by their representatives must not be taken away except when it can be fully established that it is altogether impossible to carry on government in accordance with the Constitution.

(b) **The Fortnightly Report**

5.28 The Governor's fortnightly report to the President must be a truthful unbiased account. He must scrupulously avoid reporting as if he was a supervisor appointed by the ruling party at the Centre to keep, for the benefit of that party, a wary eye on the State particularly if a rival political party is in power there. If any lapses of the State Government come to his notice, rather than acting as a C.B.I. official and shooting off a report to the President, he must first take up these with the Chief Minister. He may report to the President only if these lapses persist. For creatting mutual trust between the Governor and the Chief Minister, it should be made obligatory for the Governor to make a copy of the fortnightly report available to the latter. The Chief Minister will then feel assured that nothing is being cooked behind his back. The Governor, in his role as a link between the Centre and the State, can play a very effective and constructive part in promoting cooperative federalism if he offers an objective advice to both of them and does his best to remove misunderstandings and resolve differences between them.

@ AIR 1982 SC 710.

Conduct of State Administration as Agent of the President under President's Rule

5.29 Under President's Rule, the Governor should strive to conduct the State Administration in as efficient and non-partisan a manner as may be possible under the circumstances. If he allows the State Administration to be dominated by the ruling party at the Centre, or by its State organisation, a good opportunity for remedying the factors which led to the imposition of President's rule might be lost, thus prejudicing the chances of a stable return to popular Government in the near future. As a result the State may be pushed further into endemic political instability. A non-partisan State administration under Governor's direct rule is so rare an experience that the President's rule has come to be commonly regarded more of a device to get rid of a State Government run by rival political parties or by other political inconvenients than a weapon of last resort to be deployed in national interest in case of a grave situation of a constitutional break down in a State. Its frequent use is generally attributed to the abuse of this device for narrow party ends. If the provision for President's rule is to serve the purpose presumably visualised by the framers of the Constitution, it must imply a non-partisan efficient administration which provides the State with an opportunity for house cleaning as a necessary preparation for restoration of popular Government, as even good government is no substitute for responsible government. The desired change will have to be brought about as much by developing appropriate conventions regarding conduct of State Administration under President's rule as by undertaking Constitutional Amendments for instance, one requiring that, under President's rule, Governor's Advisors shall be appointed out of a panel of names of retired senior personnel with a reputation for honesty, independence and integrity maintained (by the Inter-State Council).

Appointment of Vice-Chancellor of a State University

5.30 Appointment of Vice-Chancellor of a State University by the Governor in his capacity as Chancellor of the University has been in some cases—West Bengal, Andhra Pradesh, etc. a cause of controversy between him and a State Government mostly when a non-Congress party is in power. In these cases, the Governor seems to have claimed that, in his capacity as Chancellor, he is empowered to act in his discretion. Actually the Governor is the Chancellor of a State University only in an ex-officio capacity, that is only by virtue of his being the Head of the State. It follows that, like his other executive functions, he must exercise his function as Chancellor to appoint the Vice-Chancellor also on the advice of the Council of Ministers, unless the State Act providing for the establishment of the University and defining the basic features of its management structure expressly requires him to exercise his discretion in this matter. Even in the latter case, he should try, to the extent possible, to carry the State Government with him. In the prevailing circumstances in the country, the Vice-Chancellor has little chance of running the University successfully and efficiently if he does not enjoy full support and confidence of the State Government. It will do no good to the University if the Chancellor, whether to assert his right to exercise his discretion in the matter, or at the bidding of the ruling party at the Centre, insists on appointing as Vice-Chancellor a person who is a *persona non grata* with the State Government. Exercise of discretionary power must subserve and not subvert, the purposes for which it has been conferred.

The Administrative Issues

6.1 The major administrative issues in Centre-State relations are : (i) the imposition of President's rule in a State; (ii) the All-India Services, (iii) the deployment of Union's armed and para-military forces in the States, (iv) the activities of Central Government agencies with regard to matters in the Concurrent and State Lists; and (v) inter-State coordination. Among the minor issues mentioned may be made of (a) issue of Directions to the States under Articles 256 and 257; and (b) delegation of Union functions to the States.

President's rule in the States

6.2 Under Article 356, if the President, on receipt of a report from the Governor or otherwise, is satisfied that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution, he may by Proclamation (a) assume all or any functions of the State Government, or powers of the Governor, or of any body or authority in the State other than the State Legislature (b) declare that the powers of the State Legislature shall be exercisable by or under the authority of Parliament, and (c) make required provisions for carrying out the objectives of the Proclamation. But the President shall not assume the powers of the High Court or suspend any provision of the Constitution relating to high Courts [Clause (i)]. Every such Proclamation normally requires approval by Parliament within two months of its issue [Clause (3)]. The Proclamation is valid for six months but can be renewed for a further period of six months, that is, in all for a period of one year*. Beyond this period, the Proclamation can be kept operative if (i) a Proclamation of Emergency is in operation and (ii) the Election Commission certifies that such extension of the validity of the proclamation is necessary on account of difficulties in holding general elections to the State Legislative Assembly. But in no case shall such Proclamation remain in force for more than 3 years [Clauses (4) and (5)].

6.3 The States take exception to Article 356 mainly on the following grounds :—

(i) It constitutes a serious discrimination against the States. There is no analogous provision for President's rule at the Centre. If no Union Council of Ministers with majority support in the present Lok Sabha is possible, the solution will be sought in dissolution of this House and a fresh general election to it. The existing Government will continue in a caretaker capacity

*This was extended by the Constitution (Forty-eighth Amendment) Act, 1984 to 2 years in the case of Punjab in respect of the proclamation issued on 6-10-83.

till, following the elections to the Lok Sabha, a new Council of Ministers with majority support in this House assumes Office. Article 74 provides that the President shall exercise his functions in accordance with the advice of the Council of Ministers. The Constitution does not at all visualise any circumstances in which there may be no Council of Ministers at the Centre or that the President may disregard its advice. There is no justification for making a different provision for the States. It is argued that in the case of the States too it should be possible to follow the same democratic process. A caretaker Council of Ministers may carry on the State administration while elections are held to the Legislative Assembly to secure a new Council of Ministers with majority support in that House.

(ii) Article 356 has been more often brazenly used by the ruling party at the Centre to serve its partisan interests than to safeguard national interest in a truly grave situation arising from constitutional breakdown in a State. This is the principal reason why the provision, though conceived by the Constitution makers as a drastic remedy for a really grave situation, has been administered almost as a daily food.

(iii) Whereas the circumstances under which the President may issue a Proclamation of Emergency under Article 352 have been specified namely, "war or external aggression or armed rebellion", Article 356 does not give any indication with regard to the circumstances in which the President may justifiably feel satisfied that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution and may proceed to take action under this Article. The undefined scope of this Article makes it liable to abuse by the Union Executive. A blatant instance of this was when in 1977 and again in 1980 Governments of several States were dismissed at one go and their Legislative Assemblies dissolved even though in most cases there was nothing to justify the conclusion that a constitutional breakdown had occurred.

(iv) The principle of natural justice has not been applied to dismissal of State Governments under Article 356(1) as these Governments were not given a reasonable opportunity to show that the conclusion that a situation had arisen in which the Government of the State could not be carried on in accordance with provisions of the Constitution was unwarranted. The right of the people of the State to be governed by their representatives was thus unjustifiably violated.

Remedial Measures

6.4 The above criticism of Articles 356 leads some to the conclusion that Articles 356 should be altogether omitted. There should be no provision for President's rule in the States just as there is none for it at the Centre. It is argued that in a genuine federal structure, the States and the Centre must be treated alike. The Constitution should make a similar provision at the two levels of Government to cope with a threatened or an actual constitutional breakdown.

6.5 Towards evolution of a genuine federal structure, the proposal that Article 356 may be omitted has considerable merit. Such a proposal indeed ought to figure as an important goal in a long-term perspective of constitutional reform. But its immediate implementation will be fraught with great dangers. The country's unity and integrity is not yet fully consolidated and has occasionally to face threats of various sorts.

6.6 These threats have their roots mainly in two basic factors which by their interaction tend to breed widespread alienation and political instability in several States. The threat to the Country's unity and integrity is compounded when the situation is exploited by hostile foreign Governments to pursue their destabilisation aims here.

6.7 The basic factors of instability include, firstly, the growing dominance of the upper class supranational forces over the Union Government and Administration. These forces, comprising the big business and those linked with it, the power-wielders at the centre and a large section of the elite All-India Services and the upper strata of professionals, in their narrow class and selfish interests, are going against the basic urges and aspirations of the Indian people. The Congress(I) increasingly represents this dominant combination.

6.8 These forces are increasingly adopting and brazenly promoting Hindi-Hindu-Hind chauvinism as their main ideological weapon and political plant to further tighten their grip over the country. This poses a threat to the distinct identity and legitimate interests of the non-Hindi nationalities and the religious minorities who are thus roused to stand up to it. The resulting conflict could grow into a serious threat to the unity of the country, and hence to its integrity, even though many millions may for the time being be brain-washed by a modern propaganda blitz to the point of accepting this aggressive chauvinism as the only effective guarantee of the country's unity and integrity. In this connection, it needs to be recalled that Nazi racism, jingoism and aggressiveness led to the ruin and division of Germany and not to its emergence as the metropolis of a world empire, which the millions of goose-stepping dupes of Nazism had been made to believe was the Fatherland's ordained destiny.

6.9 The second basic factor of instability is that no alternative dynamic perspective has yet opened up in India. A nation-wide united front based on a firm commitment to national unity and integrity as well as to the legitimate interest of non-Hindi and non-Hindu minorities, the Scheduled castes and Scheduled tribes and the dis-advantaged classes, castes and groups of all people, including the

Hindi-speaking people has yet to take shape. In some States, parties opposed to Congress(I) have emerged, built up a large following and even formed the State Government. These parties mainly reflect the urges and aspirations of the non-Hindi people which have acquired varying degree of sense of distinct identity. But in the absence of firm acceptance of the other essential commitments required of a dynamic alternative political force, these parties have generally failed to consolidate their political power even at the State level. Sooner or later they are either drawn into an unequal conflict with the Central Government run by Congress (I) or their followers get disillusioned with the party's lacklustre performance. In either case, a period of political instability ensues. This sometimes leads to a situation when a resort to Article 356 by the Centre would be inevitable. Even at the Union level the real test has yet to come as to how the Constitution may cope with a situation when (i) elections to the Lok Sabha fail to throw up a political party or front with a stable majority in the House or (ii) there is a serious and prolonged breakdown of law and order over an extensive part of the country. Perhaps, in such a situation it may become necessary to amend the constitution to provide for imposition of some sort of President's rule for a limited period to cope with these contingencies.

6.10 While it does not seem practicable for the time being to omit Article 356, safeguards such as the following may be provided against its abuse by the Union Executive.

6.11 Article 356 shall not be invoked except when (i) it has been demonstrated on the floor of the Legislative Assembly by failure of this House to approve by a majority of the total membership a motion of confidence in any person that no person with majority support in that House is available to form a Council of Ministers and that fresh elections to this House under a caretaker Government are not feasible in the prevailing circumstances, or (ii) there is a serious and prolonged breakdown of law and order and the State Government obviously lacks the will or capability to restore it within a reasonable period, or (iii) the State Government is undoubtedly engaged in or is conniving at, sabotage of national defence in case of actual or impending war. Article 352 specifies the circumstances in which the President may issue a Proclamation of Emergency, namely a threat to the security of India or any part of it by war or external aggression or armed rebellion. Likewise, towards safeguarding against misuse of Article 356, it may be specified that a situation in which the Government of the State cannot be carried on in accordance with the provisions of this Constitution shall have the meaning that at least one of the situations (i) to (iii) mentioned above in this paragraph exists.

6.12 The invocation of Article 356 it shall be governed by principles of natural justice. In other words, the Chief Minister shall be given a reasonable opportunity to show that neither of the above conditions is met and action under Article 356 is not justifiable.

6.13 When invocation of Article 356 under contemplation, the Inter-State Council shall also be given an opportunity to examine whether or not such a course will be justified. The opinion of the Inter-State Council may not ordinarily be disregarded by the President even though it may not be made binding on him.

6.14 Article 356 shall not be invoked, as has been done several times in the past, to resolve a ministerial crisis in the State ruled by the Party in power at the Centre caused by disputes and dissensions in the State Organisation of the Party or on the plea that it is necessary to do so to deal with the alleged maladministration in a State. Other means have to be found for these purposes consistent with preservation of State autonomy and operation of responsible Government in the States.

6.15 It will be equally unjustified to invoke Article 356(1) on the ground that the ruling party in the State has been defeated in the elections to the Lok Sabha. The elections to the Lok Sabha, particularly when these are held at a different time than that of elections to the State Assembly, might be fought on issues which bear little relevance to the conduct of State affairs. The defeat of the ruling party in a State in the elections to the Lok Sabha therefore might not mean that the electorate has lost their confidence in it even with regard to the matters within he purview of the States. For instance, the Congress(I) won an unprecedented majority in the 1985 general election to Lok Sabha, but showed a much poorer performance in some States, for example in Karnataka, in the Assembly elections which were held a few month later. The following observation of Justice P. N. Bhagwati in the case of State of Rajasthan *Vs.* Union of India* is very valid:

> "....merely because the ruling party in a State suffers defeat in the elections to the Lok Sabha ....by itself can be no ground for saying that the Government of the State cannot be carried on in accordance with the provisions of the Constitution. The federal structure under our Constitution clearly postulates that there may be one party in power in the State and anoher at the Centre".

6.16 The dissolution of several State Assemblies by the Janata Government in 1977 was completely unjustified and probably also bad in law as this had been done by a Presidential Proclamation. The dissolution of several Assemblies by the Congress(I) in 1980 was also unjustified in several cases.

6.17 The provision [Article 356(3)] that every proclamation issued under Article 356(1) shall be placed before each House of Parliament and shall be approved by it within two months, if it is not to cease to operate at the expiry of this period, must be honoured in accordance with both the letter and the spirit of this provision. The avoidance, evasion or circumvention of this provision

* AIR 1977 SC 1961.

by such means as the following must be prevented by suitable amendment of clause (3) of the Article :

(a) Dissolution of Legislative Assembely of the State concerned before the expiry of two months : West Bengal (1970), Mysore (1971) and Gujarat (1974);

(b) Refusal to place the Proclamation before Parliament : the Proclamation dissolving several State Assemblies in 1977;

(c) Rescinding the first Proclamation before the expiry of two months and reissue of the same : Orissa (1971; Bihar (1971)*.

6.18 The letter of clause (3), though surely not its spirit, implies that a Proclamation issued under Article 356(1), even if it is not placed before Parliament or is not approved by it, shall cease to operate only at the expiry of two months, but till then it shall operate. This is in fact the view taken by the Supreme Court in the State of Rajasthan *Vs.* the Union of India.**

6.19 In order to ensure that the letter of Article 356(3) corresponds to its spirit, it may be amended to provide for the following :

(1) The State Legislative Assembly shall be prorogued, but shall not be dissolved till such time that the Proclamation issued under Article 356(1) has been approved by both Houses of Parliament.

(2) If the proclamation is not placed before Parliament or is not approved by it, it shall be deemed to be inoperative from the time of issue and any action which, but for the powers flowing from the Proclamation, would have been void, would be deemed to be void from the very time it was taken.

6.20 The view that even within the existing framework of the Constitution the President can rightly insist that he will not take any irreversible action (such as dissolution of the Assembly) unless he is assured of the approval of Parliament within two months is of doubtful validity in view of the clear stipulation under Article 74 that the President, shall, in the exercise of his functions, act in accordance with the advice of the Council of Ministers. Furthermore, there will be no conclusive way to assure the President of the approval by Parliament till it is actually approved by the two Houses. The only way to provide the necessary safeguards in this matter will be to amend clause (3) of Article 356 as suggested above.

6.21 President's rule for an extended period is highly undesirable and will result in an erosion of both democracy and federalism. The existing time limitations on the validity of a Proclamation under Article 356 are reasonable and may be retained unchanged. In an extreme case, when there is a general consensus on the need for further prolongation of President's rule in a particular State beyond the period allowed by clause (4) and (5) of Article 356, a special provision for this could be made in respect of that State by an amendment of the Constitution as was done in the case of Punjab by the Constitution (Fortyeighth Amendment) Act, 1984. It may also be provided that everytime a resolution is moved in the Parliament for approving the continuance in force of a Proclamation under Article 356, the President shall ascertain the opinion of the Inter-State Council afresh and place it before the two Houses.

6.22 Under President's rule, the State Government must be conducted on non-party lines. Some suggestions to this end have been made in the previous chapter.

The All-India Services

6.23 Article 312 empowers the Parliament to create by law one or more All-India Services common to the Union and the States and regulate the recruitment and conditions of service of such Services. This Article declared the Indian Administrative Service and the Indian Police Service which had been created prior to commencement of the Constitution as services deemed to have been created by Parliament under this Article. Under Article 312, the Parliament enacted the All-India Services Act, 1951 which provided for joint control of the Union and State Governments in respect of regulation of the recruitment policies and conditions of service of these services, but vested in the Parliament ultimate authority with regard to all rules framed under the Act. Indian Forest Service is the only All-India Service created since the commencement of the Constitution. Suggestions were made from time to time for creating other All-India Services but all these fall through mainly because of opposition by the State Governments.

6.24 The All-India Services are a unique feature of the Indian Constitution. In no other country, the services recruited by the Federal Government and under the joint control and discipline of the federal and the State Governments exist. In creating these services the framers of the Constitution were heavily influenced by their perception of the immediate problems of politico-administrative management of the country as well as the need for stability. Rehabilitation in the aftermath of Partition, the need for postwar reconstruction and restoration of the economy, building up of administrative support for the nascent institutions for democratic self Government, integration of the princely States and a change-over from a policy of *laissez-faire* to that of a increasing role for Government in economic development and management were some of the tasks which weighed with the contemporary leadership in devising this dispensation.

6.25 Sufficient time has elapsed since then for taking a fresh look at the concept of All-India Services along with other constitutional relations. On the whole, at the State and national level adequate political, administrative and managerial experience has been generated. Political awareness has increased. There is a growing opinion in favour of democratic decentralisation not only

* All these cases have been mentioned by the Sarkaria Commission in Supplementary Questionnaire No. 9.

**Ibid.

from the Federal to the State level but also from the State level to the District and Block levels. This itself will require corresponding modifications at the administrative level.

6.26 It is often argued that in order to sustain national unity and promote integration the device of All-India Services cannot as yet be dispensed with. It needs being appreciated, however, that the unity and integrity of the country must rest on a wider and more durable basis through diffusion of economic prosperity, full employment, the strengthening of elective institutions and promotion of people's participation. Universal will to unity and integrity of the country is a far stronger sanction for the security and integrity of the country than a particular administrative apparatus.

6.27 It follows from the above that the time is now ripe for having separate Union and State Services and that this separation is a feasible proposition. Such a measure would be one of the steps towards giving a greater federal bias to the State structure in India. Ideally, therefore, the All India Services should be wound up, if necessary, in a phased manner. In the transitional period, the scheme of All India Services may be operated in mutual consultation with the State so as to avoid the trend to manage them unilaterally from the Federal level.

Deployment of the Union's Armed and Para-Military Forces in the States

6.28 The Constitution had originally made public order and police a State responsibility exclusively. Over the years this responsibility has been encroached upon by the Union on account of (i) creation and expansion of various police forces of the Union and (ii) insertion of Entry 2A in the Union List and amendment of Entries 1 and 2 of the State List by the Constitution (Forty-second Amendment) Act, 1976. These amendments together with the fact that all key positions in the State police forces are held by the Indian Police Service (IPS) officers have whittled down the responsibility of the State with respect to maintenance of Public order, thereby further eroding the latter's limited autonomy. Some States, particularly those ruled by parties who are in opposition at the Centre, are taking exception to this trend.

6.29 In this area of Centre-State relations, an issue has been raised in recent years with regard to the deployment of the armed and para-military forces of the Union in the States in aid of the civil power. The above mentioned amendments to the Union List and the State List by the Constitution (Forty-second Amendment) Act, 1976 provide an explicit constitutional sanction for such deployment. The question, however, has been raised whether such deployment has to be only at the request or concurrence of the State Government, or the Union might also undertake it *suo moto*. The Administrative Reforms Commission (ARC) has expressed the view that Article 355 empowers the Centre to take this action *suo moto*. Article 355 makes it a duty of the Union to protect States against external aggression and internal disturbance and to ensure that the Government of every State is carried on in accordance with the provisions of this Constitution. The ARC's view on this issue seems to be of doubtful validity. It may be noted that Entry 2A of List-I provides sanction for deployment of the Union's armed and para-military forces in the States only "in aid of the civil power". This stipulation connotes that such deployment must be at the request or concurrence of the recipient of the aid, namely, the civil power, in this case the State administration. How can something forced and imposed on a person or an authority against its will be considered aid, using the term in its normal meaning? The Constitution nowhere stipulates, whether explicity or implicity, that in this case the word aid is being used in any but its normal meaning. Any interpretation of the word aid which includes within its purview something imposed by force will have very dangerous implications for the third world in the sphere of international relations. In its normal, reasonable sense, aid is not imposition, it necessarily implies voluntary acceptance. *Suo moto* deployment of its forces by the Union could not therefore be reconciled with a reasonable interpretation of the stipulation "in aid of civil power".

6.30 It has been argued in Chapter 3 above that if there is a serious and prolonged breakdown of law and order in a State which obviously calls for deployment of para-military or armed forces of the Union in aid of civil power, but the popularly elected Government of that State for some reasons neither makes a request for, nor gives its concurrence to, such deployment, the President may legitimately take over the Government of the State under Article 356 on the ground that breakdown of law and order makes it impossible for the government of the State to be carried on in accordance with the Constitution. The way would then be clear for deployment of Union's forces in the State in aid of Civil power at the request or concurrence of the Governor's Administration. This course of action will obviate the need for *suo moto* deployment of forces by the Union, which measure is of doubtful validity.

6.31 Article 355 does not in any way invalidate the conclusion regarding the doubtful validity of *suo moto* deployment of its forces by the Union. This Article does not in any way add to the powers and responsibilities of the Union vis-a-vis the States. It confers only such duties on the Union as are in any case implied in other provisions of the Constitution. For instance, "Defence of India and every part thereof" is a responsibility of the Union under Article 246 (Entry 1 of the Union List). Since every State is a part of India, it is certainly implied in this provision that, as stipulated in Article 355, "It shall be the duty of the Union to protect every State against external aggression....". Again the fact that Article 356 empowers the President to take remedial action when "a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of this Constitution" implies as stipulated in Article 355 that "It shall be the duty of the Union.... to ensure that

the Government of every State is carried on in accordance with the provisions of this Constitution". Finally, since serious and prolonged breakdown of public order in a State is generally considered in our view, this should be specifically stipulated in the Constitution—as a valid justification for the conclusion that a situation of Constitutional breakdown has arisen. Article 356 may be taken to imply that it is the responsibility of the Union to take remedial action in case of such a breakdown. Article 355 puts on the Union a similar responsibility and stipulates that "It shall be the duty of the Union to protect every State against .... internal disturbance ....". Compared to "serious and prolonged breakdown of public order", the expression "internal disturbance" is a rather vague expression and is liable to misuse. In this connection it may be mentioned that Article 352 originally provided that the President may proclaim a state of grave emergency when war or external aggression or internal disturbance threatened security of India or any part of it. Following the misuse of this provision by Mrs. Indira Gandhi to proclaim such an emergency in 1975, the Constitution (Forty-fourth Amendment) Act, 1978 substituted in Article 352 the expression "armed rebellion" for "internal disturbance". If Article 355 is to be retained, the expression "internal disturbance" should be substituted by "serious and prolonged breakdown of public order". The powers and responsibilities of the Union vis-a-vis the States will not be any less if Article 355 is omitted. This Article is at best a sort of preamble to Article 356. It confers no powers and responsibilities on the Union other than those already implied in other Articles. If the other Article cannot be shown to provide sanction for *suo moto* deployment of its forces by the Union, it is no use citing Article 355 as a sanction for such deployment.

6.32 Responsibility for public order and police was a major pillor of the status and autonomy originally bestowed by the Constitution on the States. It is necessary to reverse the prevailing persistent trend towards erosion of this responsibility. To this end :

(i) further build up of the Union's para-military forces for the purpose of aiding the civil power in the States may be stopped and, instead, the State police forces should be built up to the requisite strength, morale and efficiency;

(ii) *suo moto* deployment by the Union of its armed and para-military forces in the States in aid of the civil power may be explicitly prohibited in the Constitution;

(iii) the Indian Police Service may be gradually wound up and the police forces of the States must be commanded exclusively by officers belonging to the State Police Service; and

(iv) legislation such as the Disturbed Areas Act must not be extended to any State except at the suggestion or concurrence of the State Government.

Central Government Agencies

6.33 The Central Government has created, since the commencement of the Constitution, a number of agencies whose activities relate to Concurrent and State matters. These agencies have resulted in the Union Government making inroads into the State autonomy. In the interest of orderly and harmonious Centre-State relations, it is necessary that the proper role of these agencies may be rationally defined and their activities may be limited to the assigned role.

6.34 Several factors and considerations have led the Central Government to establish these agencies. Firstly, the predominant view has been that the country cannot rely solely on the market forces for realising its professed goal of economic growth with stability and social justice, and that the unfettered operation of market forces is not in its best interest. In other words, there is need for intervention in the market. The Central Government has been considered the most suitable level of Government to take on this responsibility and to establish institutional arrangement for it so that uniform and consistent interventionist policies may be followed all over the country. This seems to have been the principal consideration for the establishment of agencies such as the Agricultural Prices Commission (now the Agricultural Costs and Prices Commission) the Food Corporation of India, the Director-General of Technical Development, the Monopolies and Restrictive Trade Practices Commission, the Bureau of Industrial Costs and Prices, and the National Savings Organisation. Secondly, with respect to some aspects of employees welfare, where uniform policies and arrangements all over the country, were considered highly desirable, the Central Government took the initiative to set up necessary institutional arrangements. The Employees State Insurance Corporation and the Employees Provident Fund seem to have had their origin in this consideration. Thirdly, with regard to activities and projects which involved inter-State implications, the Central Government set up high level technical agencies such as the Central Water and Power Commission (now the Central Water Commission and the Central Electricity Authority) to undertake the regulatory function.

6.35 Economic and social development being a closely knit process, it is not always possible to precisely demarcate the responsibility for various aspects of it between the Centre and the States. This problem has arisen in delimiting the sphere of responsibility of several of the above agencies. Some of the activities of these agencies are of considerable concern to the States and to some extent even impinge on what ought to be their legitimate sphere of responsibility. Since these agencies have been established with different considerations, it is not possible to suggest a uniform approach to defining their role from the standpoint of rational and harmonious Centre-State relations. Suggestions with regard to some individual agencies have been offered below. In general, towards minimising States' misgivings about a Central Agency set up under an Act of Parliament on a concurrent

subject, the nominees of the Governments of the States mainly concerned with the activities of this agency may be duly represented on it.

Food Corporation of India :

6.36 The Food Corporation of India (FCI) has been conceived primarily as an instrument of efficient and fair food management. Notwithstanding the frequent and generally valid public criticism about widespread corruption, wastage and inefficiency in its operations, the F.C.I. has played an important role in stabilising the food situation, preventing violent fluctuations in foodgrain prices and ensuring a reasonably fair deal to the producers and the consumers. The Corporation now annually procures and distributes huge quantities of foodgrains. The annual procurement is now close to 20 million tonnes, public distribution is of the order of 13-14 million tonnes and stocks at the close of 1985 were 24 million tonnes.

6.37 Punjab which accounts for more than 50% of the total contribution to the Central Pool of foodgrains (Punjab contributed in 1985-86 more than 10 million tonnes of wheat and rice) is vitally concerned that procurement of foodgrains must be efficient with least harassment and exploitation of the growers; that the stocks procured by the State Agencies* are taken over by the F.C.I. within a reasonable time, and that these agencies must be fully compensated for the procurement and storage costs and other incidental expenses incurred by them. Punjab has major grievances against the Government of India and the FCI in these respects.

6.38 The FCI takes long time, , sometimes as much as 2 to 3 years, to takeover the stocks procured by the State Agencies. During this period, inspite of good care, there is some deterioration in the quality of grain through sheer passage of time. At the time of takeover of grain the FCI imposes "quality cuts" on the price paid to the State Agencies. On its own part, the FCI sells all this grain at the prescribed issue price. The "quality cuts" thus become a source of income to the FCI. The State Government has been urging the Government of India that the State procurement Agencies must not be penalised for quality deterioration attributable to sheer passage of time and not to any lapses in storage of grain on their part. To this end, the State Government has suggested that the FCI should take over the stocks within 6 months. If physical takeover of stocks within this period is not possible, the FCI should in this period at least identify the stocks procured for it by the State Agencies. No quality cuts should be applied in respect of any deterioration that occurs, after the identification. This arrangement has not yet been agreed to. This is a clear case of discrimination against Punjab. In U.P. which also now makes a substantial contribution to the Central Pool, the FCI takes over the stocks procured by State Agencies within 48 hours and makes the payment for these immediately.

*The Punjab State Civil Supplies Corporation (PUNSUP), the Punjab State Cooperative Supply and Marketing Federation (MARKFED) and the State Food and Supplies Department.

6.39 The State Agencies are not compensated fully for the procurements and storage costs and other incidental expenses incurred by them. The State Government has urged that these Agencies may be allowed the same costs as actually incurred by the FCI in similar operations. The State Agencies have been giving detailed item-wise breakdown of these costs but the FCI persistently evades giving a comparable breakdown of its costs. This reinforces the State Government's suspicion that the FCI's own costs are much higher and that the State Agencies are being denied equal treatment with respect to the reimbursement of these costs. The State Government demands nothing but parity of treatment between the two. Besides remedying unfair treatment of State Agencies, equal treatment will encourage competition between the FCI and the State Agencies for economy in these costs.

5.40 A reorganisation of food management operations is now overdue for greater efficiency and for associating the States with these. The reorganisation may be undertaken on the following lines.

6.41 The FCI may be made the apex organisation of the food management structure. As such it may be entrusted with the following functions :

(i) procurement of surplus food stock from the State agencies which may be entrusted with procurement from growers/traders/millers;

(ii) supply of food to State agencies to enable them to meet the requirements of the public distribution system;

(iii) import and export of food;

(iv) maintenance and operation of the buffer stocks of food;

(v) conclusion of advance contracts with the State agencies for procurement and supply of food; and

(vi) undertaking consultations with the State agencies for greater efficiency in food management operations.

6.42 Procurement and supply of food within a State may be the exclusive responsibility of State agencies. They shall sell their surplus food stocks to the FCI at the prescribed procurement price for purchases from State agencies and meet their additional or allocated food requirements by purchase from the FCI at the prescribed issue price for these agencies. The FCI must take over the surplus stocks from the State Agencies within a reasonable period and pay for these promptly. No unreasonable quality cuts must be applied, for instance, with respect to deterioration which is solely attributable to sheer passage of time. The FCI must allow parity of treatment between the State agencies and itself with respect to procurement, storage and incidental costs admissible. The reasonable credit requirements of State agencies must be met by the banking system. The Central Government may enact legislation to provide the legal framework for reorganisation of the food management institutional structure on the above lines.

6.43 The Union Government may set up, under the Chairmanship of Minister of Food and Civil Supplies, an Advisory Committee on Food Management with concerned States' Ministers as its members. The Committee may periodically review the food management policies and institutions and suggest improvements.

The Agricultural Costs and Prices Commission :

6.44 An assured minimum price for farm produce serves as a powerful incentive for increased agricultural production. In India, besides the new farm technology based on fertiliser responsive high-yielding varieties, this incentive has been an important factor for the spectacular increase in wheat and rice production since the mid-1960s. India now (1986) operates three variants of the concept of assured minimum price for farm produce. There is the procurement price for wheat, paddy and coarse grains, the minimum support price for barley, gram, arhar, moong, urad, mustard, groundnut, sunflower seed, soyabean and cotton, and the statutory minimum price for sugarcane and jute.

6.45 The assured minimum price must be fixed keeping in view the cost of cultivation and the need for a fair balance between the interests of the grower and the consumer. Since there is an inherent conflict of interest at least in a narrow and short term sense between the surplus and the deficit States with regard to the level of the assured minimum price for different commodities, it is rational to entrust the price fixation function to the Union Government. The Agricultural Price Commission (now the Agricultural Costs and Prices Commission) was set up by the Union Government in 1965 to render expert advice in the discharge of this function. Its terms of reference were expanded in 1980 to give it an enhanced role in agricultural price policy. Price control, it may be mentioned, is a concurrent matter. It may be desirable to associate the representatives of States with the Commission, at least in an advisory capacity. Advisory panels may be set up for each commodity or group of commodities which may include in each case the representatives of the major producing and consuming States.

Bureau of Industrial Costs and Prices :

6.46 While prices of most industrial products are left to be determined by the market forces of supply and demand, prices of some important industrial products are fixed by the Union Government. The Bureau of Industrial Costs and Prices was created to render expert advice to the Government in the discharge of this function. The Bureau also took over what remained of the erstwhile Tariff Commission. As long as the country retains a system of Government administered prices for some industrial products, there will be need for an expert body like the Bureau to study industrial costs and to work out fair prices for these products for the guidance of the Government.

6.47 The price fixation function for industrial products has necessarily to be performed by the Union Government. It is of concern not so much to the States as to the principal producers and consumers of these products. If the production or consumption of some of these products is largely concentrated in some States, the representatives of these States may be associated with the Bureau by forming consultative panels for different products.

Monopolies and Restrictive Trade Practices Commission :

6.48 The Monopolies and Restrictive Trade Practices Commission was conceived as an instrument to curb the concentration of economic power and its abuse in the form of unfair trade practices. It was concerned with the regulation of the big business and hardly involved any questions of Centre-State relations.

6.49 The Commission was foredoomed due to ineffective modern industrial development which necessarily results in emergence and growth of a predominantly oligopolist industrial structure. India has been no exception to this trend. Curbs on monopolies and oligopolies generally would be either ineffective or an impediment to industrial growth. The MRTP Commission operations have been marked by both these characteristics. Now that a policy of progressive liberalisation of the economy has been adopted, the role of the MRTP Commission is very much on the decline. The Commission must not be allowed to become an impediment to industrial growth. In particular, the large houses which command the requisite resources and enterprise should be allowed to take up projects in areas classified as industrially backward whether by the Centre or the States.

Director General of Technical Development :

6.50 This agency was conceived primarily as a technical organisation to advise the Central Government (Ministry of Industry) with respect to industrial licensing and protection and promotion of Indian industry and indigenous technology. The working of this agency has been the subject of widespread public criticism on grounds of inefficiency and corruption. With liberalisation of industrial licensing and imports, particularly of capital goods and industrial inputs, and reduced emphasis on the indigenous angle of which the DGTD was the custodian, this organisation is losing its former importance. It has been suggested in Chapter 3 in the comments on Entry 52 of List I, that to prevent the abuse of this Entry by the Central Government, its scope should be limited to specified key, basic and strategic industries. If this is accepted, many industries will go out of the purview of the controls instituted under the Industries (Development and Regulation) Act, 1952. There will then be a further decline, in the DGTD's role and the capacity of its personnel to harass and exploit the industrialists. This organisation primarily concerns the manufactures. Their representatives as well as also of the States should be associated with it in a consultative capacity.

Employees' Provident Fund Organisation :

6.51 The Employees' Provident Fund has been set up under the Employees' Provident Fund Act, 1961 for the benefit of the non-Government industrial and commercial employees. The employees

and employers contribute to the Fund at the stipulated rates. The fund also earns income on its investments. Now that the number of subscribers has increased to around 18 million and the Fund's earnings on its investment are a large and growing amount, it has become a principal source of development finance. The investment policies of the Fund are at present determined solely by the Union Government. Under the present investment policies, the greater part of the Fund's investible resources flow to the Central Government by way of market borrowings, special deposits (around Rs. 1450 crores* in 1985-86) and small savings. In order to tap this resource to an even greater extent, the Central Government has permitted the EPF, with effect from 1986-87, to invest 85% of its annual net accretion of funds in Special Deposits as against 30% previously. Besides, the amount received by the Fund on maturity of Special Deposits can be fully reinvested in these Deposits.

6.52 Now that the EPF has a vast coverage in terms of activities and subscribers, and has become a major and rapidly growing source of long-term development finance, there is a strong case for transferring the responsibility for running the Fund to the States. Under an enabling legislation to be undertaken by the Union Government, each State may set up an independent EPF to be managed by a State E.P.F. Organisation. The Union Government may have its own EPF and the organisation to manage it to cover the subscribers in the Union Territories as well as in such States as may be unable or unwilling to set up an independent EPF and prefer to entrust this responsibility to the Union Government. There may be set up under the Union Finance Ministry a coordination committee of all the EPF organisations to deliberate on policy issues and to evolve, as far as possible, a commmon policy approach. Decentralisation of E.P.F. in the above manner will provide the States with an important new instrument for raising finance for this development programmes.

Employees' State Insurance Corporation :

6.53 The Employees' State Insurance Corporation provides usual social security benefits to insured non-Government industrial and commercial employees. An eligible worker makes through his employer, a compulsory weekly contribution to the Corporation related to his wages. The employer's contribution to the Corporation is also related to the worker's wages. The Corporation's income goes to finance the various benefits. This corporation may also be reorganised on the same lines as suggested above for the E.P.F. Each State may have its own Employees' State Insurance Corporation. The Corporation under the Union Government may operate in the Union Territories and such States as may entrust this function to it.

National Savings Organisation :

6.54 The Small Savings have become, particularly since the introduction of the 6-Year National Savings Certificates VI and VII Issues, a major and rapidly growing source of funds for the Central and State Plans. The net collections (collections less withdrawal and repayments) in 1985-86 have been around Rs. 4210 crores. Two-thirds of the net collection in a State is given back to it as a long-term loan from the Centre. Besides, a State which achieves a higher percentage of net collections to gross collection than the All India average is given an additional loan as an incentive. In 1986-87, the States have been budgeted to receive a total of Rs. 3200 crores while the balance Rs. 2100 crores is to be retained by the Centre. The National Savings Organisation has been set up to promote Small Savings collections. It is a Central Government Organisation headed by the National Savings Commissioner with head office at Nagpur. It has set up its Regional Offices in all the States and Union Territories. In Punjab, under the Regional Director who is located at Chandigarh, there are 5 Assistant Regional Directors and 15 District Savings Officers.

6.55 The present arrangements with respect to Small Savings may continue with the following modifications. While the National Savings Organisation may be concerned with policy issues and the review of existing and introduction of new Savings Schemes and instruments, autonomous organisations in the States may bear the full responsibility for promotion of Small Savings and may be paid a small commission related to net collections for these services. The State Organisations will also provide the National Savings Organisation the feedback on different schemes and instruments.

6.56 The States' share in net collections may be raised to 80% for higher income and 95% for lower income States. The repayment period on Small Savings loans to States may be increased to 50 years from the present 25 years with an initial moratorium of 10 years as against the present 5 years. The Small Savings loans to States, it may be noted, are related to net collections. This means that out of the gross collections the Centre first appropriates the full amount required to meet the withdrawals and repayments on small savings. It is only out of the balance that a proportion is passed on to the States as loan. Since the repayments to subscribers have already been taken care of out of gross collections, States' repayments to the Centre on small savings loans are wholly available to the Centre for its own use. In other words, these repayments constitute a resource transfer from the States to the Centre. The States, therefore, demand that to put an end to this perverse resource transfer, the loans to States may be granted in perpetuity.† The Seventh Finance Commission had in fact recommended this.** Though the Central Government did not accept this recommendation, there is a considerable substance in the States' demand. The suggested increase in the repayment and the initial moratorium period would be a step in the direction of fulfilment of this demand while avoiding too sharp an immediate break with the present practice.

*This amount also includes the Special Deposits of other recognised non-government provided, superannuation and gratuity funds.

†Report of the Eighth Finance Commission, 1984, Paragraph 14.27, p. 102.

***Ibid*, Paragraph 14.25.

Central Water Commission and Central Electricity Authority :

6.57 The Central Water Commission (CWC) and the Central Electricity Authority (CEA), which are successor organisations to the erstwhile Central Water and Power Commission, are statutory bodies created by the Centre. Over the years these bodies have been dealing with too many matters of minor detail and even very small projects have had to be submitted to them for clearance. At present all irrigation and multi-purpose schemes costing more than Rs. 5 crores are required to be technically cleared by the Central Water-Commission and the Planning Commission. In the case of power projects, clearance of the Central Electricity Authority is required for all generation and transmission projects, costing more than Rs. 5 crores. These are obviously too low limits, particularly in the case of power. In many States, the engineering and professional personnel concerned with irrigation and power development have by now acquired the necessary competence and experience for preparation, evaluation, execution and appraisal of projects. In such cases, scrutiny of proposals, projects and designs by the Central organisations causes avoidable irritation, delay and cost escalation. Thus instead of being an aid to efficient water and power development they become a considerable roadblock in the way of such development.

6.58 The technical and regulatory role of these organisations must now be limited to the Inter-State projects or those with Inter-State implications. With regard to other projects which are above a prescribed size in term of investment involved or the physical potential to be created, they may have only an advisory or a consultancy role. This limit may be set at a minimum of Rs. 20 crores for irrigation and multi-purpose projects, Rs. 25 crores for transmission projects and Rs. 100 crores for generation projects. At the same time a time limit must be set in each case for the Central Agency concerned to complete the scrutiny. State projects below the prescribed minimum size may be altogether outside their purview. Of course nothing would bar a State consulting CWC/CEA of its free will in the case of any project. There must be a time limit for these Agencies to complete examination of the projects which come within their purview.

Bhakra Beas Management Board

6.59 (i) The Centre has been extending jurisdiction over State subjects by creating certain organisations like Bhakra Beas Management Board and thus appropriating to itself vast and unfettered powers. A case in point is the provision regarding the Bhakra Beas Management Board in Part-VIII of the Punjab Reorganisation Act, 1966. These presumably get their sanction from Entry-56, List-I of the Constitution. In this section 79 (6) states that the Bhakra Management Board shall be under the control of the Central Government and shall comply with such direction as may from time to time, be given to it by that Government. This vests the Union Government with unfettered power over the Board which practically controls most of the Punjab Water Resources and a large proportion of its power resources.

(ii) The main Central Act which affects the irrigation supplies in Punjab is the Punjab Reorganisation Act, 1966. Under Section 78 and 79 of the Act, the entire assets of the Bhakra Nangal Project have been transferred to the Bhakra Beas Management Board which is constituted by the Central Government and also controlled by it. Under section 80 of the Act, the assets of the Beas Project are also transferred to the control of the Central Government, i.e., Beas Construction Board to be subsequently transferred to the Bhakra Beas Management Board. Both these projects were originally undertaken by an agreement between erstwhile Punjab and Rajasthan and were being executed by the erstwhile Punjab State. The imposition of Central control over the assets of these projects is an unnecessary intrusion into the rights and responsibilities of the Punjab State. The continuance of the Bhakra Beas Management Board is not necessary. The benefits of water and power are determined under the Punjab Reorganisation Act in accordance with the purposes of the project though there have been diputes about the correct determination of these rights by the Centre, the regulation of supplies of water and power in accordance with the decision of the Government of India taken from time to time or in accordance with the agreements, arrived at between the parties, have continued to be delivered to the partner States in the past and can be continued in future without the need of Bhakra Beas Management Board. Even before the Reorganisation, these benefits were being delivered by Punjab to Rajasthan and the reorganisation of the State in 1966 has only made the addition of one more partner namely Haryana and two territories as beneficiaries namely territory of Chandigarh and transferred territory of Himachal Pradesh. It is, therefore, not at all necessary to take away the rights and responsibilities of the State of Punjab by the Central Government under the pretext of reorganisation. The constitution of Bhakra Beas Management Board and Beas Construction Board are only infringement of the functions and responsibilities which are to be discharged by the State of Punjab. These Boards should be dissolved and the position as it was prior to 1966 needs to be restored in respect of control over the Bhakra and Beas Projects. To this extent sections 78, 79 and 80 of the Punjab Reorganisation Act, 1966 need to be amended. Similarly, section 79(1) of the Punjab Reorganisation Act which deals with the control over the Headworks at Ropar, Harika and Ferozepur and stipulates that this control should be transferred to Bhakra Beas Management Board is a serious infringement of the Punjab State's rights to administer the canals and regulators within its territories. The control over the Headworks has been with Punjab and should continue to be with Punjab. These Headworks do not find any mention in the definition of Bhakra Nangal Project as described in section 78(4)(b) of the Punjab Reorganisation Act. Again under section 79(6), the Government of India have assumed the control of Bhakra Beas Management Board which is bound to comply with such directions as may be issued by them from time to time. This provision has made the functioning of the constitutional provision of constitution regarding control and regulation of water for irrigation by the States totally

ineffective. There have been instances when Bhakra Beas Management Board on unjustified and arbitrary directions (sometimes verbal) release extra quantities of water for power generation to meet the shortage of power even outside the areas of the partner State i.e. Delhi or elsewhere, to the disadvantage of partner States.

University Grants Commission :

6.60 Over the years, the University Grants Commission (UGC) has been exercising an ever increasing control over the working of Universities and colleges in the States. This was so even before 1976 when Education was not yet a Concurrent subject. The State Governments have virtually lost any direct influence on determination and implementation of higher education policies. The States strongly resent this. This highly centralised direction of higher education policies is not in the interests of a vast country like India that shows all manner of diversities among different States and regions.

6.61 Some of the points of criticism against the UGC working are given below :

(i) Most of the funds of the UGC have gone to the Central universities. The State universities have been getting very limited funds compared to their needs. The flow of UGC funds to colleges, particularly to those located in the rural areas and catering to weaker sections, has been very meagre.

(ii) The UGC criteria for grants are inelastic and do not take into account the specific needs of States, universities and colleges.

(iii) The UGC finances new posts only for the duration of the particular Plan period. After the completion of this period, the posts become the liability of the State Government. The State thus soon have to bear the additional financial burden without having any say in determining the policies underlying the creation of these posts.

(iv) The UGC in determining and implementing its policies does not take into account the specific circumstances of different States. Its decisions, therefore, often create considerable difficulties for individual States. For instance, its decision in 1985 that henceforth the universities must grant the first degree only after 15 years of education has created a very difficult situation for Punjab and some other States which are only now (1986) introducing the 10+2 pattern of school education. Decisions taken without taking into account the views and peculiar circumstances of State often result in poor or even improper implementation.

(v) The frequent new interpretations by the UGC of the prescribed qualifications for university and college teachers have created unnecessary complications for academic institutions concerned and the State Governments.

6.62 It has been suggested in Chapter 3 that education should be made, as originally, a State subject. Any educational bodies set up by the Centre should be, as far as States are concerned, only a forum for exchange of views and experience towards arriving at common educational policies to the extent possible. These bodies must have no regulatory role with respect to educational institutions in the States, nor otherwise be in a position to influence their working in a manner as to thwart the policies adopted by the different States.

Inter-State Coordination :

6.63 Disputes arise between States particularly those sharing a common border. There should be an institutional arrangement for resolving these disputes. There may also be subjects in which several or all States may have common interest and it may be very desirable to evolve a common approach to this subjects. This will be facilitated if there exists a common institutional arrangement for the study of such subjects and for coordinating State Policies and actions on these. Article 263 provides for the establishment of such an arrangement. It empowers the President to appoint, whenever necessary in public interest, an inter-State Council to serve as a forum for consultation and coordination among the States. The Council has not yet been set up.

6.64 The State's Reorganisation Act, 1966 provided for the establishment of Zonal Councils with the object of providing an institutional mechanism for collectively pursuing States interests. In the years immmediately following their establishment, the Zonal Councils met regularly and did some useful work. But for the last many years there has been a visible loss of interest in these councils. Their meetings have been few and far between and they have played an insignificant role in studying and resolving inter-State disputes and coordinating State Policies and actions.

6.65 There is an urgent need for the establishment for the Inter-State Council as functioning institutional mechanism for inter-State and Centre-State coordination. The Council may also act as a watch dog on States' interest vis-a-vis the Centre. The Council may comprise the Prime Minister (Chairman), the Union Home and Finance Ministers and all the Chief Ministers. This makes a total of 25 members. The decisions of the Council may require approval by the Prime Minister and at least two-thirds of the other members, i.e., 17 positive votes in all including that of the Prime Minister. The Council may meet regularly, at least once each quarter. But provision may be made for summoning emergency meetings of the Council to take up urgent questions of national importance. The Council may have a permanent Secretariat. It may set up standing and ad-hoc committees.

6.66 In order to ensure due cooperation between the Zonal level and the All-India Inter-State coordination machinery, the Zonal Councils may be replaced by Zonal Committees of the Inter State Council. The Membership of Zonal Committee may include the Union Home Minister (Chairman) and the Chief Ministers of States included in the Zone. The decisions of the Zonal Committee may

require unanimity. The Zonal offices of the Secretariat of the Inter-State Council may service the Zonal Committees.

6.67 The decisions of the Inter-State Council and of its Zonal Standing or *ad hoc* Committees may have the force of recommendations and not of binding directives. The Council must serve primarily as a coordinator and a conciliator and not as an arbitrator. Its strength will be primarily in the popular support which its decisions may generate and win. The advice of Inter-State Council shall be communicated to the President through the Union Council of Ministers and not directly.

Issue of Directions to the States:

6.68 Under several Articles of the Constitution, the Union Executive has been empowered to give directions to one or more States:

(i) Under Article 256 such directions may be given as are considered necessary to ensure compliance with the laws made by Parliament and any existing laws applicable to that State.

(ii) Under Article 257(1) such directions may require a State not to impede or prejudice the exercise of the executive power of the Union. Under Article 257, directions may also be given to a State with regard to (i) construction and maintenance of means of communication declared to be of national or military importance [Clause (2)], and (ii) measures to be taken for the protection of railways within the State [Clause (3)].

(iii) Under Article 339, directions may be given to a State as to the drawing up an execution of schemes specified as essential for the welfare of scheduled tribes.

(iv) Under Article 350(A), directions may be issued to a State for providing facilities for instruction in the mother tongue at the primary stage to children belonging to linguistic minority groups.

6.69 The penalty for the failure of a State to comply with or give effect to, any directions given in the exercise of the executive power of the Union is laid down in Article 365. Under this Article, in case of such failure, it shall be lawful for the President to hold that a situation has arisen in which the Government of the State cannot be carried on in accordance with the provisions of the Constitution. This will clear the way for action under Article 356.

6.70 The power of the Union to issue directions to the States under Articles 256, 257, 339 and 350(A) is an avoidable irritant. There is a strong case for removing this irritant on the following grounds :—

(1) States are bound to comply with laws made by Parliament and any existing laws applicable to that State. If there are any doubts about the Constitutional validity of any such law, the matter can be taken to the courts. Definance of valid laws by the State will be just impermissible. It will make the State Government liable to dismissal under Article 356 on the ground of breakdown of public order. Likewise, deliberated actions of the State Government to impede or prejudice the exercise of executive power by the Union shall attract on the same ground action against it under Article 356.

(2) It is difficult to understand why normally a State Government may be unwilling to do the needful with regard to construction and maintenance of means of communication declared to be of national or military importance or protection of railways when under Article 257(4) provision has been made for reimbursement by the Union to the State of the extra cost involved. If a State Government refuses to do the needful in these respects with a view to disrupting national security and national defence, it makes it liable to dismissal under Article 356.

(3) The underlying assumption for the provisions made under Articles 339 and 350(A) is that the Union would be more sagacious than the States about the welfare of the Scheduled Tribes and a fair deal to the linguistic minorities. Actual experience does not substantiate this assumption. The Union has hardly made any use of its power under these provisions for the benefit of the tribes and the minorities. Moreover, it is time that the Union stops treating the States as probationers in responsible Government. The States should be trusted to learn from their own experience that both morality and political considerations require that the due care be taken of disadvantaged sections of their populations.

(4) Article 365 add nothing to the powers available to the Union under Article 356 to proceed against the errant States. That is the reason why Article 365 has hardly ever been invoked while Article 356 has been used and abused much too often.

6.71 Amendment of the Constitution to omit all provisions that empower the Union to issue directions to the States will be a positive step, even if a very nominal one, towards restoring a more even balance between the Union and the States.

Financial Dependence of the States on the Centre

7.1 The financial relations are today the least satisfactory aspects of the Centre-State relations. These relations grievously violate the basis principle of federal finance that each level of government must be substantially, if not wholly, self-reliant with regard to financial resources required for due discharge of its responsibilities under the Constitution. Inordinate financial dependence of one level of Government on the other inevitably erodes over time the authority and role of the former, eventually bringing about a basis change in the state structure. Indeed, this process has been very much under way

in India for the last thirtyfive years, more so in recent years. The States have become heavily dependent upon resource transfers from the Centre for financing their revenue and capital expenditure. As a result there has been a marked erosion of States' authority, responsibility and freedom of action with regard to the subjects originally assigned to them by the Constitution. The State's role in the Indian state system as envisaged in the Constitution has been increasingly undermined. India is visibly moving further away from the federal concept of state structure. The dimensions of States' finanacial dependence on the Centre have been brought out below.

7.2 The States depend on resource transfers from the Centre for financing a substantial proportion of their revenue and capital expenditure. This dependence is altogether overwhelming in the latter case. The resource transfers from the Centre are partly by way of Devolution in accordence with the recommendations of the Finance Commission and partly as discretionary grants and loans. Central Assistance for State Plans belongs to the latter category. The States' financial dependence on the Centre, overall as well as separately with respect to the financing of their revenue and capital expenditure, is brought out in this chapter.

States' Overall Financial Dependence :

7.3 The States' overall financial dependence on the Centre in recent years has been brought out in Table 7.1.

7.4. Table 7.1 shows that resource transfers from the Centre, including both Devolution and discretionary transfers, now finance over 45% of the States' overall expenditure and this percentage has been rising in recent years. States' own receipts finance a little over 50% of the total expenditure. The balance expenditure, a sizeable proportion, is deficit financed. In the past even the accumulated deficit has had to be financed to a large extent initially by the Centre by periodically granting medium-term loans to the States to clear their unauthorised overdrafts from the R.B.I. The Centre extended such loans in 1972-73 (Rs. 421 crore), 1978-79 (Rs. 555 crore), 1982-83 (Rs. 1743 crore), 1983-84 (Rs. 400 crore) and 1985-86 (Rs. 1628 crore). The resource transfers from the Centre to the States on Capital Account shown in Table 6·1 exclude the loans for clearance of overdrafts. If the Centre, as it is doing at present, strictly adheres to its scheme for the elimination of States' unauthorised overdrafts introduced in 1985-86, there would be no more Central loans to States to enable them to clear the overdrafts from the R.B.I. This will effectively choke off the main source of funds for financing the States' overall deficit. Unless the States make up for this by augmenting their own receipts, they will have to either further restrain their expenditure or depend even more heavily on resource transfers from the Centre. Even as it is the States' financial dependence on the Centre has reached unacceptable proportions with far reaching consequences for the country's state structure and the body politic.

Dependence for Financing Revenue Expenditure :

7.5 With regard to financing of States revenue expenditure, the dependence on resource transfers from the Centre is now closed to 40 per cent. This brought out in Table 7.2

TABLE 7.2

*Included in "Others", i.e. (b).

7.6. Table 7·2 indicates that States' own revenue receipts financed only 62·7%, 59·3% and 59·7% of their revenue expenditure in 1983-84, 1984-85 (R. E.) and 1985-86 (B.E.), respectively. The resource transfers from the Centre financed 38·2%, 37.5% and 39·4% of this expenditure in the corresponding three years. States' share of Central Taxes financed 21·0%, 20·1% and 20·7% of this expenditure. The balance 17·2%, 17·4% and 18·7% of the expenditure in the three years respectively was financed by grants from the Centre.

7.7. The R.B.I. study does not give the amount of the Devolution grants separately. The full contribution of Devolution of financing of States' revenue expenditure cannot, therefore, be worked out from this study. The breakdown between Devolution and the discretionary transfer to the State is, however, available in the Government of India's Budget documents. This breakdown is given below :

TABLE 7.3

Devolution and Discretionary Transfers from the centre to the states

(3) Central and Centrally Sponsored Plan Schemes	2231.79	20.5	2355.15	18.1	2645.51	18.4	2997.44	19.5
(4) N. E. Council Plan Scheme	22.05	0.2	25.52	0.2	21.32	0.2	35.36	0.2
3. Total Transfers	10856.51	100.0	13027.55	100.0	14353.65	100.0	15397.99	100.0

7.8 The resource transfers to States shown in the Central Budget documents are, as may be expected, some what different from those worked out from the State Budgets but this discrepancy is not of an order as to significantly modify the broad conclusions. Table 7.3 indicates that Devolution accounts for about 60 per cent of the total transfers and the balance of around 40 per cent consists of discretionary grants including the grant portion of the Central Assistance for State Plans. Table 7.2 above had shown that in recent years resource transfers from the Centre had financed around 40% of the total revenue expenditure of the States. Breaking this percentage into 60:40 ratio, the contribution of Devolution and discretionary transfers to financing of States' revenue expenditure may be estimated at 24% and 16% respectively.

7.9 The above is the average picture for the totality of States. The position varies with individual States. The data on Punjab are given in Table 7.4.

7.10 The contribution of Devolution transfers (that is, share of Central taxes and Devolution grants) to financing of Punjab's revenue expenditure has been as follows : 1984-85, 13.0%, 1985-86 (B.E.), 10.4%, 1985-86 (R.E.), 10.9%, and 1986-87 (B.E.), 11.7%. This is far below the estimated national averge of around 24%. The contribution of discretionary transfers has been : 1984-85, 8.2%, 1985-86 (B.E.), 16.0%, 1985-86 (R.E.), 17.7% and 1986-87, 11.3%. There were some exceptional discretionary transfers in 1985-86 on both Plan and Non-Plan accounts which inflated their contribution to financing of revenue expenditure. The 1986-87 Budget Estimates (11.3%) give a more normal picture. The contribution of normal discretionary transfers might be estimated as of the order of 11% which is substantially below the estimated national average of 16%. Taking together both devolution and discretionary transfers, the normal resource transfer from the Centre may be estimated to be financing around 23% of Punjab revenue expenditure as against the national average of around 40 per cent.

Dependence for Financing Capital Expenditure

7.11 The States' dependence upon the Centre for financing their capital expenditure is much greater than for financing their revenue expenditure. This is brought out in Table 7.5.

7.12 Table 7.5 shows that in recent years States' own net capital receipts, after meeting repayment obligations on past loans from the Centre, could finance no more than a very modest proportion of their capital expenditure : 1983-84, 28.7 per cent, 1984-85 (R.E.) 18.6 per cent and 1985-86 (B.E.), 21.5 per cent. A very high and rising proportion of the total capital expenditure had to be financed by new loans from the Centre : 1983-84, 68.8 per cent, 1984.85, 68.8 per cent and 1985-86 (B.E.), 70.4 per cent. In addition a considerable deficit was incurred. As a ratio of the total capital outlay, the deficit was as follows : 1983-84, 10.5 per cent 1984-85 (R.E.), 12.6 per cent and 1985-86 (B.E.), 8.1 per cent. The above shows that the States are, with regard to financing of Capital Expenditure, even more, indeed far more, dependent on resource transfers from the Centre than they are with respect to their Revenue Expenditure.

7.13 All loans and advances from the Centre to the State are discretionary. This is the case even with the loans granted to the States against net

collections of Small Savings. At present the States are given loans equivalent to two-thirds of the net collection from Small Savings. In recent years these loans (Sometimes described as States' share in Small Savings) formed some 40 per cent of the States' total loans from the Centre (excluding ways and means advances). These loans are given not under any constitutional obligation but as a result of the Central Government's own decision to provide an incentive to the States for promoting Small Savings collections. The Constitution does not in any way bar the Centre from altering the two-thirds ratio in either direction or from altogether discontinuing grant of loans to States on this account. Articles 293(2) only enables the Government of India to make loans to any State, subject to any limits or conditions laid down by Parliament but it does not in any way oblige it to do so. Under the provisions of the Constitution all loans from the Centre to the States are discretionary.

7.14 Likewise, the Central Assistance for State Plans including both its loan and grant component, is a discretionary resource transfer by the Centre. Its quantum is determined by the Union Government (Ministry of Finance) with some discrete prodding by the Planning Commission. The Centre is not obliged under the Constitution to set up a planning Commission. It is entirely the creation of the Union Government by an executive decision and is dominated by the latter in a variety of ways. The Planning Commission has the responsibility for *inter se* distribution of Central Assistance among the States. The Scheme of distribution is formally approved by the National Development council but is in fact worked out by the Planning Commission with the concurrence of the Ministry of Finance. The Central Assistance for State Plans is an entirely discretionary arrangement.

7.15 A substantial proportion of the States' capital receipts classified in Table 7.5 as the States' own receipts is, in fact, subject to the consent of the Government of India. While Article 293(1) enables the States to borrow within the territory of India upon the security of the Consolidated Fund of the States subject to any limits imposed by their respective State Legislatures. Article 293(3) actually makes all borrowing by the States subject to the consent of the Government of India. This clause lays down that a State may not without the consent of the Government of India raise any loan if any previous loan to it granted or guaranteed by the Central Government was still outstanding. Since all States are now heavily indebted to the Centre, the approval of Government of India is now necessary for all borrowing by the State Governments. In other words, the receipts under internal debt, are not strictly speaking, the States' own capital receipts. Article 293(3) confirms that the Constitution makers were seriously lacking in realistic anticipations about the likely profile of Centre-State financial relations after the commencement of the Constitution. Only the States' receipts from recovery of loans and advances and under the Public Account can be considered truly their own capital receipts. All this shows how near total is the States' dependence on the Centre for financing their capital outlays.

Factors for Financial Dependence of States

8.1 States' heavy financial dependence on the Centre has been the result of factors that have, during the last 35 years, either required them to incur expanded revenue and capital expenditure, or have prevented a commensurate increase in their own revenue and capital receipts. Some of the principal factors of these categories have been discussed below.

(I) Factors for Growth of State Expenditure

8.2 The Constitution entrusted the States with exclusive or major responsibility for extensive areas of economic, social and cultural development. These include ; agriculture and allied services ; irrigation, drainage and flood control; electricity; roads and bridges ; road transport ; water supply and sanitation ; education, art and culture ; medical and public health; housing and urban development office and other buildings for expanding State administration; social security and welfare; and development of local bodies and Panchayati Raj institutions. Discharge of States' development responsibilities, even if very limited and inadequate so far, has involved rapid growth of revenue and capital expenditure. A contributory factor for this trend has been the generally low efficiency of public expenditure in India so that larger than reasonable outlays have been needed to obtain the desired physical results.

8.3 The provisions of the Constitution relating to State finances strongly suggest that the Constitution makers severely under-estimated the public expenditure requirements implied in the development responsibilities entrusted to the States. In particular, they seem to have had little preception of the large capital outlays required of the States. It looks that the large majority of the Constitutent Assembly either did not seriously believe in planned development or had little awareness of its implications, in the Indian context, with regard to growth of public expenditure. They probably failed to foresee that whatever pattern of development the country might adopt, the State would need to play a very active role in promoting and assisting development and that, even if the country choose to follow a capitalist pattern of development, the Centre and the State Governments, in their respective areas of responsibility under the Constitution would need to undertake and assist investment in a big way, basides incurring; growing maintenance and development expenditure on revenue account on State and State-aided services, over a long period of time as a sort of extended pump-priming to enable the Indian economy to pick up the critical minimum of dynamism. This is, in fact, what has been happening during the last thirtyfive years. Rapid growth of States' revenue and capital expenditure is a direct consequence of this course of development.

8.4 There has also been a rapid growth of States' non-development expenditure. Interest payments, police, collection of taxes and duties, pensions and other retirement benefits, secretariat general services and district administration, compensation and assignments to local bodies and Panchayati Raj Institutions, and maintenance of government buildings (public

works) are the principal items that have shown a high rate of growth of non-development revenue expenditure and now account for the bulk of this expenditure. On capital account, the principal items of non-development expenditure are repayment of debt (mainly of loans from the centre) and loans advances to Government Servants. The details are given in Table 8.1.

8.5 Interest payments and debt repayments are now by far the largest item of States non-development expenditure. These accounted for 41.1%, 45.6% and 43.1% of such expenditure during 1983-84, 1984-85 (R.E.) and 1985-86 (B.E.) respectively. This item reflects the States growing indebtedness, particularly to the Centre. An idea of the rapid gowth of this debt during the 15 years ending 1985-86 is given in Table 8.2.

*Includes Centre's medium-term loans to enable the States to clear their overdrafts with the R.B.I.

8.6 Over a period of 15 years. States debt has grown 5.7 times rising to a total of Rs. 49683 crores. At the end of 1985-86, States loans and advances from the Centre worked out to over 71% of their total debt. A major factor for rapid growth of States' indebtedness has been that as much as 70% of the Central Assistance for States is being given as loans. Since a large proportion of these loans has been invested in social and economic infrastructural facilities – schools, hospitals, roads, social housing, Government administrative and residential buildings, irrigation, soil conservation, area develop-

ment, river multipurpose projects, etc. It never directly yields the surplus needed to meet the repayment obligations on these loans and the States indebtedness to the Centre mounts. The States interest liabilities have increased even faster than the growth in their indebtedness on account of the marked increase in interest rate in India as a consequence of the tight monetary policy deliberately adopted by the Centre to curb and control inflation. The Government of India has persisted in this policy and high interest rates have been maintained even though in the international capital market the interest rates have markedly come down during the last year or two.

8.7 Public order is a State subject. The States are required to spend a growing amount on police towards discharging this responsibility. The increasing expenditure on pensions and other retirement benefits is the result of a growing number of pensisners and higher and more liberal pensions and benefits. The increasing total cost of tax collection is a concomitant of the growing tax revenue. The State Administration has cost the exchequer an increasing amount on account of the growing number of employees, their higher salaries and allowances and the higher cost of contingencies. Local Bodies and Panchayati Raj institutions are a State responsibility. Due discharge of this responsibility calls for growing financial support to these grassroot democratic institutions, but the paucity of resources prevents the States from extending support on the required scale. In spite of the increasing amounts being paid to them, their institutions are languashing over the greater part of the country for lack of adequate financial resources. If anything, very much more needs to be done by way of financial support to put life and vigour in these institutions. Public Works, mainly the maintenance of government bulidings, costs the State revenues a growing amount on account of the increasing area to be looked after and the higher unit cost of maintenance.

8.8 Apart from the debt repayments, a major item of States non-development capital outlay is the loans to Government servants for purchase of vehicles and other purposes. But this item shows only a modest rate of growth. There are also a few other items of non-development capital outlay which add up to a sizeable outgo.

(2) Factors for States' Inadequate Budgetary Receipts

8.9 States growing expenditure on revenue and capital account has not been matched by a commensurate expansion of their non-budgetary receipts, thus obliging them to increasingly look up to the Centre for financial support. States inadequate budgetary receipts may be attributed to : (i) a narrow tax base ; (ii) constraints on additional taxation, (iii) low returns on investment and enterprise ; and (iv) the Central Government's relentless drive for large capital receipts. An analysis of these casual factors has been attempted below.

(1) *A Narrow Tax Base*

8.10 The prevalent folklore on the subject of Centre-State financial relations attributes the States financial woes first and foremost to the alleged inelasticity, in a broad sense, of their own taxes. It is held that the taxes in the State List are inherently incapable of growing as fast as the principal taxes in the Union List. As a result, the States own tax revenues do not grow as fast as Centre's tax revenues and have to be supplemented by transfers from the Centre by way of share in Central taxes and grants.

8.11 It is indeed true that during the first fifteen years following the commencement of the Constitution, the revenue from States taxes was generally growing at a somewhat slower rate than the Centre's tax revenue (before States share of taxes) so that the latter's proportion in the total tax revenue was slowly improving. But since the mid-1960, the earlier trend has been reversed. By 1985-86 (B.E.), the Centre's percentage share had gradually declined to about the same level as observed in 1950-51. This is brought out in Table 8.3.

8.12 In Table 8.3, combined data for the States and the Union Territories has been given as separate figures for the States are not readily available. This, however, does not significantly alter the picture as the Union Territories with legislature account for only a tiny fraction of the total tax revenue. Table 8.3 shows that since the mid-1960s, in spite of the fact that the sales on sugar, textiles and tobacco formerly levied by the States has been substituted by Additional Duties of Excise levied by the Centre, the revenue from State taxes has generally tended to grow faster so that its contribution to total tax revenue has risen again to about the 1950-51 level.

8.13 At a particular rate of growth of the economy, the rate of growth of tax revenue depends upon, (i) the price and income elasticity of the taxes, that is, how responsive if the tax yield at unchanged tax rates etc. to the rise in the price level and the growth of national income (gross domestic product in real terms) ; (ii) the additional tax effort undertaken ; (iii) the improvement in tax enforcement ; and (iv) the tax structure, particularly the relative contribution of the more price and income-elastic taxes to total tax revenue. Towards securing large tax revenues, the Centre is *prima facie* at some inherent advantage compared to the States in all the above respects.

TABLE 8.3

Tax Revenue of the Centre, States and Union Territories

Period (Fiscal Years)	Rs. Crore			As per cent of total

*Including Revised Estimates for 1984-85.

8.14 The Union List has three principal taxes : the Income Tax on personal and corporated income, the Union Excise Duties and the Customs Duties. Between them they account for over 97% of the Centre's gross tax revenue. The Income Tax being related to money income is highly priced and income-elastic. Even with unchanged Income Tax, an increase in money incomes whether due to rise in prices or to real income growth ought to be reflected in larger tax revenue. Indeed, to the extent that the personal or corporate business incomes rise more than proportionately to the rise in prices because of lag in wages, or a rise in money incomes pushes the personal income tax payers into higher tax slabs, the revenue from income and corporate taxes should be rising more than proportionately to the rise in prices and real incomes. Union Excise Duties are related to the volume, value and structure of industrial output. Economic growth and industrial development inevitably widen the tax base for excise duties.

8.15 Since the early 1970s, customs duties have become a highly elastic source of revenue. All but a negligible fraction of the customs revenue is derived from import duties. As a result primarily of a liberalised import policy and the structural change in the composition of imports (particularly the substitution of industrial raw materials and products for cereals), the volume and value of imports has become highly income elastic. From 1975-76 to 1982-83 (the latest year for which the Quantum Index of Imports is yet available), against a rise of only 28% in G.D.P. in real terms, the quantum (as distinguished from value) of imports increased by 102%, that is 3.64 times the increase in G.D.P. During the same period, the Unit value Index of Import increased by 37%. These increases in the volume and unit value of imports raised the value of imports in 1982-83 to 2.1 (2.02×1.37) times the 1975-76 level. This was the principal factor which together with the structural change in imports and the substantial additional taxation with regard to import duties undertaken in 1981-82 and 1982-83 pushed up the customs revenue in 1982-83 (Rs. 5,119.40 crores) to 3.7 times the 1975-76 level (Rs. 1,419.4 crores). The high rate of growth of Customs revenue has been sustained ever since. The 1986-87, Budget Estimates have projected the customs revenue at Rs. 10,406.81 crores, that is over twice the 1982-83 level. Once again the principal factor for the increase in revenue seems to have been the high G.D.P. elasticity of imports, through increase in unit values (on account of, *inter-alia*, the depreciation in the external value of the rupee during this period) and the very substantial additional taxation undertaken every year have also made a considerable contribution to this increase. Since 1975-76, the Customs Duties have shown the highest rate of growth among the central taxes. This trend is likely to continue as long as the present highly import-intensive growth policy can be sustained.

8.16 The inherent price and income-elasticity of the principal Central taxes tends to endow the Central tax revenues with a high growth potential. On the other hand, the States tax revenues have a sizeable low-yielding and slow growing region, namely, the direct taxes in the State list. Land revenue, the principal direct tax in the State is a classical example of a price and income-inelastic tax. Agricultural income tax is levied by only 3 States (Assam, West Bengal and Karnataka) which have a sizeable area under plantations. It is extremely doubtful if the tax will yield much additional revenue if the other States, particularly those which have no large area under plantations, were to introduce it. Ten States (Andhra Pradesh, Harayana, Himachal Pradesh, J. & K., Kerala, Orissa, Punjab, Rajasthan, Sikkim and Tamil Nadu) do not levy the professions tax. The very populous States of U.P. and Bihar have levied this tax with effect from 1984-85, but they expect a revenue collection of not more than Rs. 5 lakhs and Rs. 25 lakhs, respectively. Furthermore Article 276(2) limits the total amount of tax payable in respect of any one person to the State or to any one local authority

in the State to Rs. 2.50 per annum. The Urban Immovable property tax yields meager and almost inelastic revenue Rs. 9 crores for all States in 1985-86 (B.E.). Twelve States (Bihar, Haryana, Himachal, Karnataka, Maharashatra, Manipur, Meghalaya, Nagaland, Orissa, Punjab, Sikkim and Tripura) do not levy this tax. The other ten States collect an insignificant amount each. U.P. collects a mere Rs. one lakh.

8.17 The States are also at a considerable disadvantage, compared to the Centre, with respect to other factors mentioned above which have a bearing on the growth of tax revenues. Firstly, it is much more difficult for the State Governments, than it is for the Centre, to undertake additional taxation. The State Governments and Legislatures are much closer to the people and are far more amenable to their pressure and resistance. They do not command powerful media like the Radio and Television which may put across their view point, whether valid or fallacious, day in or day out, or undertake a persistent build up of their image. Nor is the press, particularly the big national papers, so co-operative with them and so lavish with their understanding and support, as they generally are with the Central Government. It is only in some exceptional periods, when the Central Government by some very ill-advised policies and measures might have seriously offended the class which owns the press and finances the political parties, that the Centre has to face the sort of press and public criticism as is the daily lot of State Governments, not only of other parties but to an extent even of the ruling party at the Centre if these are headed by persons who are out of favour with the top leadership of that party. For the last 20 years or so, it has been a set policy of the top leadership of this party that no State leader of it is to be allowed to so grow in stature or become so free of snipping by his ministerial and party colleagues as to develop into a potential rival leadership pole. This has had a profound impact on the calibre, freedom of action and stability of the State Chief Ministers of that party. As for the State Governments of other parties, they generally function under an ever present threat of Centrally sponsored or approved propoganda compaigns, mass agitations and "liberation" struggles that are often climaxed by a bolt from the Raj Bhavan if they provide the State unit of the party an opportunity for hostile move by undertaking an unpopular measure like large additional taxation. The principal Central taxes are very high-yielding and directly affect only limited numbers so that the Government can raise even large additional tax revenues with a fairly manageable effort. On the contrary, the State taxes are generally low-yielding and directly affect large numbers. In order to raise even a modest additional amount, a State Government has to push up several taxes and to pinch a much larger proportion of the electorate. Finally, whereas the Union Excise Duties and Customs duties become an indistinguishable part of price, in the case of the States' principal indirect taxes—the sales tax, the taxes on vehicles, passengers and goods, the electricity duty and the stamps and registration fees—the amount of the tax is very much known to the consumers so that its burden is fully felt by them. For the above reason additional taxation is a far more hazardous exercise for the State Governments than it is for the Central Government.

8.18 Secondly, the scope for tax evasion seems to be somewhat larger with regard to State taxes. The Corporation tax covers a very manageable number of assessees but the Agricultural Income Tax will have to have a much larger number of assessees to yield revenue equivalent to or even a small fraction of the Corporation Tax collection. Moreover, the conceptual and statistical problems in computation of taxable income are more complicated in the later case. The Professions Tax is at least as difficult to administer as the Income tax particularly with regard to non-salaried employees. The Sales Tax assessees are far more in number and are more widely dispersed than are those covered by the Union Excise Duties. Besides, Sales tax provides a powerful incentive for collusion between the seller and the buyer for tax evasion. The yield from Stamps and Registration Fees, particularly with regard to transfer of real estate, is substantially reduced by collusion between the purchaser and the seller. The revenue from State Excise Duties is adversely affected in all States by considerable illicit distillation or other malpractices. There is a considerable evasion of tax on goods and passengers, particularly, by private operators. There is a considerable evasion taxes on vehicles by certain categories of private operators. There is, no doubt, also a considerable evasion of customs duties by smuggling, under invoicing, false description of the imported goods and the like. But a good deal of smuggling, for example that of gold, is aimed at jumping the import ban rather than evasion of import duty. Moreover, the scope for tax evasion through under invoicing etc., is fairly limited if the customs staff are vigilant and honest.

8.19 In spite of all the adverse factors that the State Governments have to contend with towards imposition and collection of taxes, the aggregate revenue from State taxes has shown, during the last ten years or so, a higher growth rate than that observed in the case of gross revenue from Central taxes. The only plausible explanation is that (i) contrary to popular belief, the State taxes, taken together, are quite comparable to Central taxes with respect to their price and income elasticity, and (ii) the States have not lagged behind the Centre, possibly have gone ahead of the latter, towards exploiting the revenue potential of their respective taxes.

8.20 The States' direct taxes are admittedly highly inelastic with respect to prices and incomes. Land Revenue, the principal direct tax, is altogether inelastic. The Professions Tax is nearly so. The Agricultural Income Tax should be more elastic but its other problems have deterred all but three States from imposing it. The States' indirect taxes are, however, very different in this respect. The Sales Tax, by far the most important indirect tax, being *ad valorem* benefits from larger sales turnover, whether it is due to larger volume of sales or to the higher prices of the goods sold. Larger money incomes definitely have a favourable impact on revenue from State excise on account of larger

sales of liquor. Stamps and Registration Fees are *ad valorem* taxes. Increase in capital values resulting from inflation and real growth enhance the revenue yield of this tax. The faster accretion to the number of vehicles and the larger traffic that go with growth of out put and incomes improve the revenue from vehicles taxes and the passengers and goods taxes. Revenue from the Electricity Duty benefits from higher electricity consumption which is usually associated with output and income growth.

8.21 That the States' indirect taxes are fairly elastic is borne out by the fact that, over the period 1975-76 to 1985-86, the improvement in the revenue from these taxes have been comparable, generally superior, to those from Central taxes. This is brought in Table 8.4.

8.22 Table 8.4 shows that, over the period 1975-76 to 1985-86, the State Excise and the Sales tax have registered substantially higher increase in revenue (377% and 319% respectively) than that shown by the Union Excise Duties (220%). Electricity duty has shown a higher increase in revenue (508%) than that observed in the case of any Central tax. Stamps and Registration, Taxes on Vehicles and Taxes on Passengers and Goods have shown a substantially higher revenue growth (265%, 320% and 239% respectively) than that yielded by the Union Excise Duties (220%). Since the

SOURCE : For the Sates "Finances of State Governments during 1985-86", op. cit., Statement 20, p. 822. For the Centre—Report on Currency and Finance 1984-85. Vol. II, Statement 81, 106.

*Accounts for the Centre and Revised Estimates for the States.

indirect taxes account for around 96% of the States' tax revenue, the inelasticity of States' direct taxes has only an insignificant impact on the growth of the States' aggregate tax revenue which, in the period under reference, showed a substantially higher increase (306%) than did the Centres' aggregate tax revenue (242%).

8.23 The increase in the States' tax revenue, as that in the Centre's tax revenue, is partly attributable to additional taxation undertaken during the period. The available data on additional taxation show that, had there been no rise in prices and incomes during this period, the States' aggregate tax revenue would have shown a far more modest improvement. This suggests that by far the largest contribution to growth of the States', as also the Centre's tax revenue has come from the impact of around 50% rise in national output and income (G.D.P.) and around 110% rise in the price level (as measured by the increase in the G.D.P. defaltor) observed during this period. This shows that the States' aggregate tax revenue is fairly elastic to prices and incomes. Any disadvantage that the States might have, relatively, to the Centre, in this respect seems to be of only minor and not crucial significance. The principal explanation for the States' financial dependence on the Centre must be sought in some other factor(s).

8.24 If the difference between the Centre and the States with respect to the price and income-elasticity of their respective aggregate tax revenue is of minor significance, more so if the Centre is

assumed to have a slight edge over the States in this respect, its slow growth of the Centre's tax revenue in recent years would suggest that it is shying away from the exploitation of the growth potential of the taxes. Indeed, there is now enough evidence that in recent years there has been an increasingly reorientation of Centre's fiscal policy in the direction of "Tax less, borrow more". The affluent classes which have been increasingly gaining in economic strength and political clout naturally prefer that the Government should borrow their surplus income, and that too at high rates of interest, instead of just taxing it away. The new policy orientation is the outcome of their increasingly effective pressure. The Central Government has visibly grown soft on taxation but it has been going in for borrowing, both within the country and outside, in a big way. In pursuance of this policy, the Central Government has persisted in a policy of very high interest rates even when the interest rates in the international capital market have shown a marked fall. The interest rates in India are now visibly out of line with the world marked rates. This is beginning to cause several distortions in the Indian economy. India is fast becoming the rentier's paradise. The number and well-being of those living principally on interest incomes is growing as never before. It appears that the Central Government will persist in the new policy orientation even though it has resulted in mounting deficits on revenue account and spiralling interest liabilities. As long as the Centre adheres to the new policy while the States remain unaffected by it, the latters own tax revenue is likely to continue growing at a higher rate than what the Centre's tax revenue might show.

8.25 There is a good probability that the States may follow suit. It makes much greater political and economic sense for a State Government, particularly if it happens to be the one which can always count on sympathy and support from the Centre, to go soft on taxation (that is do the minimum taxation that it can get away with *vis a vis* the Planning Commission) and go all out towards tapping the maximum of the flow of private saving in the country. This way it may achieve a high rate of growth of the State economy with minimum immediate burden of development on the people. This course of development might yield it rich political dividends. In any case, unlike the Central Government, it is not within the power of any State Government to make a significant impact on the rate of domestic saving even if it undertakes a Herculean taxation effort. Why then run a grave political risk by undertaking such an attempt ? If the States begin to argue this way, they may even outdo the Centre in going soft on taxation. As a result the growth of their tax revenue may also significantly slow down. Such a course will be disastrous for the country's economic future. A proper development perspective for the country calls for greater and not less tax effort by both the Centre and the States, as well as greater efficiency in public expenditure. The new fiscal policy orientation has already done a considerable damage to the economy. Rather than following suit, the States must press for reversal of this policy by the Centre.

8.26 The crucial factor for States' financial dependence on the Centre is their *very narrow tax base* in relation to their revenue expenditure as well as the Centre's tax base. These facts are brought out in Table 8·5.

8.27 In Table 8.5, 3(ii) shows that the revenue expenditure of the States (including the Union Territories with Legislature) has been considerably higher than the Centre's revenue expenditure (excluding grants to the States and U.Ts. for development and non-development purposes). It was 114·2%, 132·6%, 126·1%, 120·5% and 120·0% of the Centre's revenue expenditure in 1975-76, 1980-81, 1983-84, 1984-85(R.E.) and 1985-87(B.E.), respectively. On the other hand, the revenue receipts of the States (and the U.Ts.), excluding the States' share in Central taxes, were generally no more than around one-half of the Centre's tax revenue (before States' share of Central taxes) : 1985-76, 47·0%, 1980-81, 50·6%, 1983-84, 52·1%, 1984-85(R.E.), 51·9%, and 1985-86(B.E.), 54·8%. Clearly in spite of having to finince a considerably large revenue expenditure, the States (and the U.Ts.) have a much narrower tax base. The result has been that as shown in 3(iv) the Centre's tax revenue has invariably exceeded its revenue expenditure (excluding grants

to the States and U.Ts.). The excess in different years was : 1975-76, 36·8%, 1980-81, 26%, 1983-84, 17%, 1984-85(R.E.), 7·3% and 1985-86(B.E.), 5%. The excess shows a declining trend as the Centre's gross tax revenue has been growing slower than its revenue expenditure. In contrast, as shown by 3(iii), the revenue from the State (and U.T.) taxes has been generally less than one-half on their revenue expenditure. Moreover, this proportion has shown a declining trend : 1975-76, 56·2%, 1980-81, 48·1%, and 1983-84, 48·4%, 1984-85(R.E.), 46·2% and 1985-86(B.E.), 47·7%.

8.28 The basic conclusions that emerge are the following :

(i) The Centre's gross tax base is more than commensurate with its revenue expenditure (excluding grants to the States and U. Ts.). If the Centre did not have to share some of its taxes with the States or to provide grant assistance to the States and the U. Ts. with legislature, the Centre's tax revenue alone would yield it a revenue surplus, and its non-tax revenue would entirely add to that surplus ;

(ii) Centre is going soft on taxation and is not taking steps to ensure that its gross tax revenue grows at least *pari passu* with its revenue expenditure. As a result, the excess of the former over the latter is getting progressively eroded ; and

(iii) The States have too narrow a tax base compared to their revenue expenditure. The gap between the two cannot be filled by even the maximum effort at raising non-tax revenue or undertaking additional tax effort that may be politically and economically feasible. The States' dependence on the Centre for additional resources by way of share of taxes and grants is thus inherent and unavoidable under the existing provisions with regard to Centre-State financial relations.

8.29 The States' narrow tax base is attributable primarily to the Constitution itself and is not the result of fiscal developments during the last 35 years. As shown in Table 6·8, in 1950-51, the very first fiscal year after the commencement of the Constitution, the distribution of tax revenue between the States and the Centre, without taking into account the States' share in Central taxes, was in the ratio of 35·4 : 64·6. That position has been maintained, with very minor changes, ever since. In the meantime, the States, towards discharge of their constitutional responsibilities, have had to step up their revenue expenditure to the level where it exceeds the Centre's revenue expenditure, exclusive of grants to the States and U.Ts., by a considerable margin. The need for financial transfers from the Centre to the States is routed in these disproportionalities of the Centre-State financial relations. The crucial problem then is *the too narrow tax base of the* States and not, as is commonly postulated, the relative inelasticity of their aggregate tax revenue.

(2) *Low Returns on Investment and Enterprise :*

8.30 States' non-tax revenues (exclusive of grants from the Centre) have been financing in recent years only a small fraction, about one-fifth of the gap between States' revenue expenditure and their tax revenue. This is brought out in Table 8.6.

8.31 Table 8.6, item (3) shows that over the years the State's non-tax revenue has declined to a little over 10 per cent of their revenue expenditure. Its contribution to financing the gap between States' revenue expenditure and their own tax revenue has declined to below 20 per cent [Table 8·6, item (4)]. The balance gap has to be financed by grants from the Centre. The States, in order to reduce their financial dependence on the Centre, will need to secure larger non-tax revenues. While it may be possible to secure some improvement in the receipts from Services, the resource mobilisation effort needs to be directed principally to securing a more adequate return on State's investment and enterprise. This return is low at present mainly because

State revenues. Commercial irrigation projects are by far the biggest loser. The second largest loser is the multipurpose river projects. The receipts generally do not cover even working expenses @. The successive Finance Commissions have been prodding the State Governments to improve the financial performance of these projects and fixing very modest norms for the same. But nothing has worked. If anything, the position has increasingly deteriorated over time. During the Seventh Five Year Plan period (1985---90), the receipts from commercial irrigation and multi-purpose projects, at 1984-85 rates, were estimated to fall short of even the working expenses by Rs. 966 corres*. Including interest charges, the losses on the same basis have been estimated at Rs. 5095 crores. Nothing was done in the 1985-86 budget towards improvement in this situation. The extimated losses for the year, Rs. 766·21 crores, are in line with the estimate of Rs. 5095 crores for the five-year period. These losses will be a heavy burden on State finances in all the States which have extensive public irrigation facilities. Departmental commercial undertakings in other activities are relatively much smaller losers, but their losses add upto a large figure.

8.34 The large positive net return from forests is at best a mixed blessing. In many states, the financial gain is offset by denudation of the forest cover which, for the country as a whole, is already very inadequate in relation to even the minimum ecological requirements. The country is already paying every year a heavy price for the inadequate forest cover in the form of damage done by otherwise avoidable droughts, floods, soil erosion and desertification. Long term national interest requires that exploitation of the country's forest wealth must be kept down to the level consistent with ecological considerations even if immediately this means lower annual net return to some States.

(ii) *Net Return from Investment in Non-Departmental Undertakings*

8.35 In the matter of financial performance, the States' Non-Departmental undertakings are no better than the Departmental undertakings.

8.36. In general, the S.E.Bs. financial performance remains far from satisfactory. At the 1984-85 rates of tariff, the commercial losses of S.E.Bs. over the Seventh Plan period (1985-90) were estimated at Rs. 1,17,57 crores£. The Seventh Plan has the S.E.Bs., the target of raising Rs. 7000 crores of *net*** additional revenue during this period. This is indeed a tall order, particularly because, the target is set in net terms. Even if this target is fulfilled, the S.E.Bs would still have incurred commercial losses of Rs. 4757 crores during the Seventh Plan period.

8.37. The poor financial performance of S.E.Bs. affects State finances in several ways. Firstly, the States' interest receipts are depressed. As on March 31, 1984, the State Government loans to S.E.Bs stood at Rs. 13639 crores&. A further substantial amount must have been added during 1984-85 as is normally being done every year. The total interest due from S.E.Bs to State Government during the Seventh Plan period has been estimated at Rs. 8555 crores. Projections for the Seventh Plan period showed that at 1984-85 tariff rates, 11 S.E.Bs (out of a total of 18) would have deficits after providing for depreciation and interest on borrowings from financial institutions and will be in no position to meet their interest obligations to their State Governments. The total default in their case has been estimated at Rs. 5588 crores. Another S.E.B. would be defaulting to the extent of Rs. 40 crores, raising the total to Rs. 5628 crores. Some other S.E.Bs/Power Corporation would also have a deficit or a very inadequate surplus. They could meet their interest obligations to the respective State Governments only by diversion of depreciation provisions or some other improper way. If they too choose the straight forward course of skipping the interest payment due to the State Government, the total default would add up to Rs. 6734 crores. This is equivalent to 8.5% of the estimated States total tax revenue during the Seventh Plan period at 1984-85 tax rates. The S.E.Bs. of only 3 States (Andhra Pradesh, Madhya Pradesh and Orissa) are anticipated to have a large enough surplus to meet in full their interest obligations to the State Government. To the extent that the Seventh Plan target of additional net revenue is realised, some other S.E.Bs. may also be able to pay at least a part of the interest due to their respective State Governments. Secondly, the capital account of the States is also put under extra strain. Expansion of S.E.B. activities, in several cases even the replacement and renewal of depreciated plant and equipment, has to be financed by fresh State loans. For instance, during the Seventh Plan period, at 1984-85 rates of tariff, the S.E.Bs' contribution to Plan resources (measured by their depreciation provision plus retained profit plus miscellaneous capital receipts less loan repayments to institutional creditors) has been estimated at Rs. (–) 1569 crores*. This means that the S.E.B's other extra-Budgetary resources, namely, their market borrowings and term loans from financial institutions will be substantially offset by the negative contribution to Plan resources. As a result, the projected large amount of gross capital formation by the S.E.Bs. during the Seventh Plan period will need to be financed by fresh State loans which will fetch the lenders neither due interest payment nor loans repayment.

8.38. The position with regard to State Road Transport Corporation/Undertakings is very similar. Their commercial losses for the Seventh Plan period, at 1984-85 rates, have been estimated at Rs. 1434 crores@. Their losses, after entirely

**That is net of any erosion of S.E.Bs' revenue resulting from cost excalation and other factors. & Report of the Eighth Finance Commission 1984, Annexure-III. 5, p. 181.

eating away the Corporation's depreciation provision, will leave substantial uncovered deficit. This deficit together with the loan repayments due to the institutional creditors, would result in the Road Corporations' own contribution to Plan resources becoming a large negative amount, namely, Rs. (–) 415 crores. This implies that there would have to be substantial fresh capital contribution from the State Budgets as also from other sources towards financing the fresh capital formation of State Road Transport Corporations.

8.39. There has been a big increase in recent years in States' share capital investment in Statutory Corporations and Government Companies other than S.E.Bs. and Road Transport Corporations. The Eighth Finance Commission estimated this investment at the end of 1983-84 at Rs. 1921.81 crores. The State investment in cooperative institutions at that time was estimated at Rs. 1721.42 crores. On this investment of Rs. 3643.23 crores, augmented by the additional investment undertaken during 1984-85, the States are expected to receive during 1985-86 a mere Rs. 37.43 crores as dividend (out of a total estimated receipt of Rs. 37.49 crores under this Head by the States and U.Ts.). This gives a return on investment of barely 1%. The contribution to Plan resources by this category of enterprises has been projected at a mere Rs. 15 crores for the 5-year period. Obviously fresh capital formation by these enterprises will also depend largely on Budgetary support by the States.

8.40. Policies and measures to improve the financial performance of States, departmental and non-departmental undertakings must be an important element of the required many sided effort towards establishing a more even financial balance between the Centre and the States. The resulting improvement in the return on investment and enterprise secured by the States would make a sizeable contribution to reducing the gap between their revenue expenditure and own tax and non-tax revenues.

(3) Centre's Drive for Capital Receipts :

8.41. The States' disadvantage relatively to the Centre is much more serious with regard to capital receipts than it is with regard to revenue receipts. The Centre has always had the lion's share in the public sector's capital receipts. In recent years, the reorientation of Centre's fiscal policy towards the "Tax less, borrow more" postulate has led it to further intensify its drive for mobilisation of capital receipts. The principal instruments employed by the Centre to secure for itself the bulk of the public sector's capital receipts are detailed below. A knowledge of these will help to work out measures towards enabling the States to secure a due share of these receipts.

(i) *External Assistance* :

8.42. The Centre is the sole recipient of external assistance to the public sector. External assistance for State projects has to be channelled through the Centre. External assistance, which was a mere trickle during the first Five Year Plan period, has since grown into a large flow. This is shown in Table 8.8.

8.43. During the 35-years period (fiscal years 1951 to 1985), the Centre has received a total of Rs. 27257 crores (at current prices) as Budgetary receipts corresponding to External Assistance. This amount is equivalent to two-thirds of the Centre's total net lending (lending less repayment/with off) to the States during this period. The country's self-reliance goal which had been defined as elimination of net external assistance from abroad, a definition which has not yet been formally repudiated or modified, obviously is being held in abeyance for the time being. As long as the present position lasts, the external assistance* will continue to make a substantial contribution to Centre's capital receipts. The 1986-87 Budget estimates have put this contribution at 15 per cent (Rs. 2950 crores out of a total of Rs. 19670 crores).

TABLE 8.8

Centre's Budgetary Receipts Corresponding to External Assistance.

(Rs. in crores)

*Includes commercial borrowing/equity participation from abroad by public sector enterprises.

(ii) *Special Credits from Abroad* :

8.44. In addition to the external assistance the Central Government receives special credits from abroad for specific purposes. These credits are in the nature of commercial borrowing from abroad on Central Government account but possibly on easier terms. The counterpart of gross receipts is presumably credited to a special account maintained in the Central Government Public Account. The net accurals from this source add to the total net receipts in the Public Account. The data on annual receipts of special credits are not available but the size of annual repayments (for example, Rs. 90.88 crores in the 1986-87 Budget Estimates) suggests that the former are possibly a substantial amount.

*Including its grant portion.

(iii) Commercial Borrowing from Abroad by Central Government

8.45. In recent years, the Central Government has opened up a substantial additional source of funds for itself. This is commercial borrowing and equity participation from abroad, mainly the former, secured by Central autonomous undertakings. In the past, in line with the accepted selfreliance goal, the country fought shy of commercial borrowing and equity investment from abroad. The flow of funds in these forms remained a neligible trickle in most years. In some years there was even a net outgo of funds on this account. Efforts were made to meet the maximum of the country's requirements of external funds by securing concessional aid. As a result, while many Third World countries have now been caught in vicious debt trap, India has been able to avoid this trap and enjoys a high credit rating in the international capital markets. In recent years, there has been a noticeable departure from this policy. Several factors have contributed to this change. On account of policy reorientation in several directions, the country is having huge balance of payments deficits on current account. Even though the concessional external assistance is availed of in unprecedented amounts, it is necessary to supplement it with commercial borrowing ot finance the payments deficit. Otherwise the new policy orientation will not be sustainable Secondly, there has been in recent times a marked decline in interest rates in the international capital market. These rates, in fact, have fallen to substantially below the prevailing rates in India. An influential body of opinion would like India to avail of this opportunity. They believe that this would speed up the growth and modernisation of the Indian economy, thus creating conditions for a triumphant march into the 21st century. Thirdly, India's high credit rating in the international capital market facilitates borrowing at reasonable rates of interest which are comparable to those received by the most creditworthy borrowers from the developed countries. Fourthly, the western aid donors, particularly the U.S.A., have been putting strong pressure on India to graduate out of concessional aid into commercial borrowing in the international market and foreign equity investment in the Indian economy.

8.46. The data on acutal receipts from commercial borrowing abroad, including suppliers' credit, is not readily available to the public. Since all proposals for commercial borrowing abroad, including those from undertakings, require approval by the Government of India, the approvals may be taken as abroad, even if not a precise, indicator. The approvals aggregated to Rs. 1085 crores and Rs. 1906 crores in 1983-84 and 1984-85. These were anticipated at Rs. 1500 crores during 1985-86*. The commercial borrowings have been mainly in the form of syndicated commercial bank loans and suppliers' credit, but lately some amounts have also been raised by issue of bonds. The bulk of commercial borrowing has been raised by Central public sector undertakings. The 1985-86 plan anticipated that these undertakings will raise Rs. 865 crores from this source during the year. The balance amount has been raised by the private sector. It is doubtful if there has been any flow of funds to the State undertakings from this source. Commercial borrowing abroad by Central undertakings relieves to this extent the Central Government from the need to extend Budgetary support to these undertakings. If the Central Government is obliged to further liberalise its policy towards commercial borrowings, the latter may become an important source of funds for the Central undertakings.

(iv) *Deficit Financing*

8.47. Deficit financing, that is net borrowing from the Reserve Bank of India (RBI) has been another major source of funds for the Central Government. The latter can borrow from the RBI by issuing adhoc treasury bills (TBs.) without any constitutional limit. The Central Government may also borrow from the public, mostly the commercial and cooperative, banks, by issuing TBs. to them. Whenever the banks and other holders need cash, they rediscount (in effect, sell) the TBs. to the R. B. I. To this extent, too, the RBI is the eventual lender to the Central Government. There is no constitutional limit on the RBI with regard to rediscounting of TBs. Again, whenever the Central Government borrows from the Public (mainly the banks, the LIC and the non-Government Provident Funds) by issuing dated securities, the RBI may directly subscribe to these securities (to make the issue a success) or may acquire these securities through open market operations by purchasing these in the market at the going price. In either case, the R.B.I. lends to the Central Government against dated securities. Since the Central Government has the monopoly right to produce one-rupee notes and all coins, the R.B.I. acquires these by crediting the Cental Government account with the face value of the coins. In this case, the R.B.I. is in effect lending to the Central Government against these notes and coins whose intrinsic value is much less than their face value. Finally, when the Central Government builds up its deposit with the R.B.I., it is in fact lending to the latter. Conversely depletion of this deposit is in effect, Central Government borrowing from the R.B.I. The increase in R.B.I. hodlings of adhoc Treasury Bills, dated securities and one-rupee notes and coins together with the decrease in the Central Government deposit with the R.B.I. measures the total Central Government borrowing from the R. B. I. In other words, this amount measures the total deficit financing undertaken by the Central Government.

8.48. There is no constitutional limits on the Centre with respect to the amount of deficit financing that it might undertake. Any limit on it has to be only a self imposed limit namely, that imposed by Parliament by law under Article 292. But the Parliament is fully competent to raise or altogether abolish any such limit by law. No such limit is operative at present. The Central Government is restrained only by the economic limit to deficit financing as excessive indulgence in it may touch off unmanageable inflationary pressures. But in practice this limit is fairly flexible. A stable Central Government, the like of which India has had most of the time since Independence, may sometimes hazard a considerable

*Ministry of Finance, Economic Survey, 1985-86, Paragraph 8.60, p. 90.

degree of inflation without inviting unacceptable risks. This has, in fact, happened serveral times during the last 35 years.

The R.B.I. has indeed been a bountiful milch cow for the Central Government. Whereas, at the end of 1970-71, the Central Government's net borrowing from the R. B. I. has stood at Rs. 3569 crores, by the end of March 1986, this amount had increased to Rs. 38920 crores. In other words, over a period of 15 years, the Central Government had milked the R. B. I. to the extent of Rs. 35351 crores. This amount exceeds by Rs. 3728 crores the total amount of net lending (Rs. 31623 crores) to the States undertaken by the Centre during this period.

8.49. The States have no similar opportunity for augmenting their financial resources. The R.B.I. does not hold any State Government securities on its own account. The method of borrowing from the R.B.I. by issuing Treasury Bills and dated securities is not open to the State Governments. The States can borrow from the RBI only in two ways : (i) by means of loans and advances, and (ii) by drawing down their cash balance with the R. B. I. The States have been given authorised limits on ways and means advances from the R. B. I. In the past, when the States' pressing needs for cash could not be contained within the authorised limits, they continued to draw on the R. B. I. even beyond these limits. The only way for the Government of India and the R. B. I. to enforce the authorised limit was to refuse to honour the cheques issued by a State Government which has exceeded this limit. This would naturally do a great damage to the credit of the errant State Government and create a crisis situation. The Central Government hesitated to instruct the R. B.I. to take the crucial step of dishonouring the cheques. A major reason for this presumably was that in most cases the ruling party at the Centre was also in power in errant States. In course of time, this practice assumed intolerable proportions. Moreover, this practice was indulged in also by Governments of other parties who had come to power in some States.

Towards putting an end to this practice, the Central Government introduced the overdraft Regulation Scheme in 1972-73. It was modified in 1978. Nevertheless, this practice continued and was adopted by more States. On several occasions (1972-73, 1978-79, 1982-83 and 1983-84), the Central Government provided adhoc loan assistance to State Governments to clear their overdrafts with the R.B.I. But every time, almost immediately, the problem again surfaced. The Government doubled the authorised limits in 1982 but the practice of unauthorised overdrafts continued.

8.50. The Central Government finally overcame the problem in 1985-86. The Centre granted medium term loans to the States to an aggregate amount of Rs. 1628 crores (equivalent to 90%) of the overdraft level of Rs. 1809 crores reached on January 28, 1985 to clear their overdrafts with the R.B.I. They were required to clear the balance 10% themselves. The Centre also laid down that, with effect from October 1, 1985, the States shall not run overdrafts with R. B. I. for more than 7 continuous working days. This is being strictly enforced. No overdraft was outstanding against any State at the end of March, 1986.

8.51. The R.B.I.'s former responsibility to grant loans to State Governments to enable them to participate in the share capital of cooperative credit societies has passed to NABARD after the new bank started functioning in July, 1982.

8.52. As a result of the above developments, at the end of March, 1986 the State Government's net borrowing from the R. B. I. stood at Rs. (—) 19 crores as against Rs. 237 crores at the end of 1970-71. In other words, over the 15 years period (1971—86), the addition to State Governments' net borrowing, that is, their deficit financing, has been a negative amount to the extent of Rs. 256 (—19,237) crores. Reserve Bank is now more than ever before a truly high yielding milch cow of the Central Government.

(v) *Market Borrowing :*

8.53. Market borrowings, that is, borrowings by the Central and State Governments and their enterprises and local bodies (excluding financial institutions) from the capital market against negotiable dated securities is an important source of funds for financing the Central and State Plans. Over the successive Plan periods, this source of Plan finance has tended to gain in relative importance as shown in Table 8.9.

TABLE 8.9

**Actuals for 1980-81 to 1983-84 and Budget Estimates for 1984-85:

8.54. While market borrowing has begun to finance in recent years around 20% of the over-all plan outlay, from the Fourth Five-Year Plan onwards, the States' share in total borrowing has been drastically reduced. This is brought out in Table 8.10.

8.55. In the Third Plan period, the States' share in market borrowing was 62.7 per cent. In the Annual plans, it came down to 46.2 per cent. From

the Fourth plan onwards, the States' share has been drastically reduced to less than a quarter. The Seventh Five-Year Plan set the States, share at 32.5 per cent but the Annual Plan for 1985-86, the first year of the Seventh Plan, set the States' share at only 23.9 per cent. This suggests that the actuals for the Seventh Five-Year Plan period are likely to show the the State's share in market borrowing as a much lower percentage than the original estimates.

8.56. Two factors have made it possible for the Centre to raise its share in total market borrowing to over three-fourth, in spite of vigorous and persistent protests by the States against this very uneven distribution. Firstly, Article 293(3) of the Constitution has made it obligatory for a State which has an outstanding loan or a part of a loan granted or guaranteed by the Government of India to secure the latter's consent to any borrowing within the territory of India upon the security of the Consolidated Fund of the State. Since all States have outstanding loans granted to them by the Centre, Article 293(3) effectively bars independent access to capital markets to all of them. They can borrow on the capital market only to the extent agreed to by the Centre. This Article indeed provides further evidence that the scheme of financial relations between the Centre and the States worked out by the Constitution makers was little informed by an even remotely realistic conjecture of the likely shape of Centre-State relations under the provisions of the Constitution relating to division of functions and revenues between the two levels of Government.

TABLE 8.10

State's Share in Total Market Borrowing (Actual)

Plan period	Total Market borrowing	State's Share in market borrowing	Col. 2 as % of Col. 1
0	1	2	3

*Includes investment by the S.B.I. out of PL 480 funds.

Article 293(1) empowered the States to undertake borrowing within the territory of India, but clause (3) of this Article in effect changed the very character of this borrowing into that of allocation by the Central Government, thus making it a kin to Central Assistance for State Plans. Market borrowing has ceased to be an independent source of finance for the State Plans. The Centre has used the opportunity thus provided to allocate the lion's share of market borrowing to itself. Over the 35 years period FY 1951 to 1985 the Centre has raised a net amount (measured by the total market loans raised *less* the market loans repaid) of Rs. 34,050 crores as market loans.* In contrast, the State Governments have raised no more than around Rs. 5,800 crores.@ Even when allowance is made for the fact that a proportion of the market borrowing allocated to the States has been reallocated further to SEBs., SRTCs., Housing Boards, Municipal Corporation etc. the total amount of which is not readily known, there is little doubt that the Centre has been by far the bigger beneficiary from such borrowing.

8.57. Secondly, over the years, the Centre has extended its ownership or control over all the financial institutions which subscribe to all but a fraction of the total market borrowing by the Centre and the States. In the case of borrowing by the States, these institutions are the commercial and co-operative banks, the L.I.C., the General Insurance Companies and the non-Government Provident Funds. The State Governments have at best some influence over the State Co-operative Banks and the Provident Funds of Exempted Establishments. Even in their case, the Central Government (R.B.I.) wields considerable control and influence. All other institutions are fully under the control of the Central Government. In the event, even if under the Constitution no sanction of the Central Government were required for States' market borrowing, it is doubtful if many states could have raised adequate amounts this way without the approval and support of the Central Government/ R.B.I.

8.58. The Centre not only appropriates for its own use the bulk of the market borrowing, it also determines, through the Planning Commission, the *inter se* distribution among the States of the total amount allocated to them. The total amount allocated to the States is now divided into two parts, namely the normal and the special. In the financing scheme of the Seventh Plan, for instance, the relative share of the two parts has been set at around 70:30.† The division between the normal and the special is purely arbitrary. The Planning Commission might have as well set any other proportion between the two parts. The procedure for the distribution of the normal component for the past many years has been to allow a uniform increase over the previous year's figure. In the Seventh Five-Year Plan also this allocation has been affected "by allowing a uniform step up over the base year level"‡. This is just a mechanical projection in which irrationalities and anomalies in the base year allocation get magnified with evey passing year. This procedure provides no scope for taking into account the original inequities or a change in the

*Explanatory Memorandum to the Budget of the Central Government for 1986-87, Statement VI, p. 117.

@Report on Currency and Finance 1984-85, op. cit., Vol. II, Statement 92, p. 124.

†Seventh Five-Year Plan 1985—90, Vol. I, Paragraph 4.36, P. 1524.

‡Ibid.

relative circumstances of States. In the Seventh Plan, Punjab has been allocated out of the normal component the *smallest* amount (Rs. 196 crores) among all the non-special category States. Even Haryana which is considerably smaller State with a population only about three-fourth of that of Punjab, has been allocated a substantially larger amount (Rs. 229 crores) of market borrowing. No planning or any other principle seems to underlie the distribution of the normal market borrowing.

8.59. The special component of market borrowing is given only to the special category States and such other States as have a per capita State Domestic Product (SDP) lower than the National average. Actually, the concept used was "no higher than" the national average of per capita SDP. Otherwise Tamil Nadu which has per capita SDP equal to the national average would have been excluded. In the Seventh Plan this amount has been distributed among 16 States, namely, 8 special category States and 8 other States with a "not higher than the average" per capita SDP. Six States (Gujarat, Haryana, Karnataka, Maharashtra, Punjab and West Bengal) with a higher than average per capita SDP were altogether excluded. The arbitrariness of this distribition is fully brought out by the allocation to Tamil Nadu. This State had the same but not lower per capita SDP than the national average. It, was, therefore, considered just eligible to receive a share out of the special component. It is reported to have received an allocation of Rs. 225 crores from the special component, that is, an amount substantially larger than the total amount of market borrowing allocated to Punjab on all counts. If Tamil Nadu's per capita SDP had been higher by just one rupee, the State would have become ineligible for a share out of the special component and it would have been denied market borrowings of Rs. 225 crores. Could any allocation scheme for market borrowing be more arbitrary?

8.60. Since Punjab receives nothing out of the special component, its total allocation of market borrowing is the same as its normal allocation, namely Rs. 196 crores or 1.97 per cent of the total allocation of Rs. 9942 crores to the States in the Seventh Plan on both the counts. With regard to market borrowing, Punjab has been placed at the bottom among all the non-special category States, Why? The State is unable to discern, much less appreciate, the logic of this raw deal.

8.61. The market borrowings of States would be truly their own resources if these were secured on the basis of their credit-worthiness, or at least bore same relation to it. There is, in fact, no relationship whatsoever between the two. When the market borrowing of Rajasthan is set, as is reported to have been done in the Seventh Plan, at an amount approaching that of Maharashtra, or Gujarat's allocation of market borrowing is less than two-third of that of Madhya Pradesh, this item, both its aggregate amount and its *inter se* distribution among the States, is obviously as much a matter of allocation by the Central Government (Planning Commission) as the Central Assistance for State Plans. The market borrowing of States had indeed become a form of Central Assistance for State Plans instead of being a component of State's own resources.

(vi) *Bond Issues by Central Undertakings:*

8.62. Till very recently the Central and State autonomous undertakings refrained from tapping the domestic capital market by issue of bonds, secured against the fixed assets of the borrowing undertaking (but, unlike market borrowing, not carrying a Government guarantee) in the manner done by private companies. The Central public undertaking were provided with long-term finance largely by the Central Government in the form of loans and equity investment. The public undertakings of the State Governments did the same. It was, however, usual for the State Governments to reallocate a part of their allocation of market borrowing to the S.E. Bs., SRTCs., Housing Boards, Municipal Corporations etc. But no attempt was made to borrow from the capital market outside of this allocation. Recently selected Cantral undertakings have broken fresh ground in resource mobilisation. They have gone to the market with their bonds which are secured against their fixed assets and carry market rates of interest and the usual tax incentive but are not guaranteed by the Central Government. For instance, in 1985-86, the Indian Telephone Industries issued bonds for Rs. 100 crores. The success of this issue has encouraged the Central Government to set higher targets for such bond issues in 1986-87; National Thermal Power Corporation, Rs. 300 crores; National Hydro Electric Power Corporation, Rs. 150 crores; the Indian Telephone Industries and the Metropolitan Telephone Corporation (for Delhi and Bombay), Rs. 330 Crores; Coal undertakings, Rs. 50 crores; Chemical/Petrochemical undertakings, Rs. 50 crores; and Railways, Rs. 250 crores. This adds upto Rs. 1,130 crores in a single year. The Railways are not an autonomous but a departmental undertaking. The amount raised through Railway bonds will be credited to the Central Government Public Account and an equivalent additional amount of capital outlay will be made available to them

8.63. The State undertakings have not yet ventured, into this source of funds. In any case all bond issues, like the debenture issues by private companies, will require clearance of the Central Government's Controller of Capital issues. It is doubtful if the bond issues will even yield the State undertakings a significant amount of resources unless active steps are taken by the Central and the State Governments to encourage them to go in for bond issues.

(vii) *Special Deposit Schemes :*

8.64. Financial institutions such as the non-Goverment Provident Funds, the Life Insurance Corporation and the General Insurance Corporation and its subsidiaries are a rapidly growing source of development finance. Prior to July, 1975, these institutions invested a substantial proportion of their funds, under statutory obligations or otherwise, in such forms as market borrowing and the Small Savings schemes where the States shared the proceeds with the Centre. In July, 1985, the Centre initiated a scheme of special Deposits to divert solely to itself a sizeable proportion of the investible funds of the Employees' Provident Fund and other recognised non-Government Provident, superannuation and gratuity funds. These funds were allowed to invest 30 per cent of their net accretion

in a special deposit with the Government of India carrying a higher (10 per cent) rate of interest. Besides, the entire amount received on maturity of a special deposit could be invested in a fresh special deposit. The interest was raised to 11 per cent with effect from April, 1983. During the ten-year period ending 1984-85, the net accretion to special deposits was about Rs. 5,600 crores. Large net amounts are now flowing into these deposits annually. The flow in 1985-86 has been estimated at Rs. 1,450 crores. The anticipation for 1986-87 is Rs. 1,500 crores. The actual realisation in 1986-87 is, however, expected to be much larger because of two changes introduced with effect from this year. The rate of interest has been raised to 12 per cent and the funds have been permitted to invest 85 per cent (as against 30 per cent previously) of the net accretion in special deposits.

8.65. Under another Special Deposits scheme introduced from April, 1980, the L. I. C., the G. I. C. and its subsidiaries and the Unit Trust of India also invest their surplus funds with the Government of India in 10 Year deposits. Initially the rate of interest was 10 percent but with effect from April, 1983, it has been raised to 11 per cent. The net accretion to special deposits under this scheme has been estimated at Rs. 320 crores in 1985-86. The net receipts during 1986-87 have also been set at the same level.

8.66. The investment in special deposits by non-Government Provident Funds is almost entirely a diversion from Market Borrowings and Small Savings; the investment by insurance corporation is partially so. Since Market Borrowings and Small Savings are, while special deposits are not, shared by the Centre with the States, the special deposits shemes have been the Centre's device to reinforce its own Budgetary position at the expenses of the States.

(viii) *Public Provident Fund :*

8.67. At the Centre, the State Provident Funds are open to subscription only by the Central Government employees and the employees of quasi-Government institutions such as the Central Universities. Subscription to these Funds carries tax benefits. The net accretion to the Funds is a capital receipt of the Centre. The non-Government employees could subscribe to other statutory and recognised Provident Funds. But no provident fund facility carrying tax benefits was available to the self employed. In order to tap their savings, the Central Government instituted by an Act the Public Provident Fund Scheme in 1968 which is open to all. An individual who is also a member of a Hindu Undivided Family (HUF) can open another account on behalf of the HUF for purposes of subscription to the Fund. The outstanding balance with the Fund is exempt from Wealth Tax and the interest earned on it is exempt from Income Tax. Net accretion to the Fund both in 1985-86 (R.E.) and in 1986-87 (B.E.) has been estimated at Rs. 105 crores. In order to make the scheme attractive, the rate of interest on the Public Provident Fund has been raised with effect from 1986-87 from 10 per cent to 12 per cent.

(ix) *National Deposit Scheme :*

8.68. The Centre instituted the National Deposit Scheme in July, 1984. The deposits are for a period of 4 years and carry 10.5 per cent rate of interest. A major attraction of these deposits is the exclusive income and wealth tax benefits over and above those available on other approved saving. The annual net-receipts in 1985-86 (R.E.) and 1986-87 (B.E.) are put at Rs. 200 crores.

(x) *Deposits of the Surplus Funds of the Oil and other Public Sector Undertakings:*

8.69. For some years now, the Central Government has been requiring its oil and other public sector undertakings to deposit their surplus funds within the Public Account. The States would have no legitimate reason to take exception to this practice if it were limited to genuine surpluses of these undertakings. Many State Governments also now oblige their undertakings to deposit their surplus, or even not so surplus, funds with them. The Central Government however, has in recent years begun to make use of this practice to deny the States their due share of Union excise duties.

8.70. If the Central Government were to raise the prices of products of public sector undertakings with a view to securing a reasonable return on investment, the States could not object to this. But when, as has generally been the case in recent years with Centre's oil undertakings, the prices are raised to generate extra surpluses which are then deposited with the Government, the States have a legitimate grouse against this practice. If the concerned undertakings are already earning a high return on investment but an increase in the product price is considered necessary either to restrain domestic consumption or to raise more revenue, or to do both, the proper course would be to raise the excise duty. But in this case, the Centre would share the extra revenue with the States in accordance with the Finance Commission recommendations. To avoid having to do this, the Centre has instead been raising the prices of oil products. This has resulted in oil undertakings having large surplus funds with them which they have been depositing with the Central Government (Public Account). The Centre has been raising the prices of petroleum products even in the face of falling prices of crude and products in the world market, thus further adding to the surplus funds. While the amount of deposits annually received by the Central Government for this source cannot be ascertained from the Budget documents it is known to be a very substantial figure. Possibly in the same manner some other undertakings have also been enabled to generate surpluses for deposit with the Central Government. The States feel cheated of the additional revenue which would have flowed to them as share of Union Excise Duties if the rise in prices had instead been effected by raising the excise duty on these products.

(xi) *Small Savings :*

8.71. There has been a qualitative improvement in the net collections under small savings since 1981-82 when the VI and VII Issues of 6-Years National Savings Certificates, carrying 12% rate of interest and attractive tax incentives, were issued. Whereas the total amount outstanding under all Small Savings media at the end of 1975-76 was Rs. 4,237 crores, the net receipts in 1985-86 alone have been estimated at Rs. 4,209 crores.

8.72. The Small Savings media are a liability of the Central Government. The net collections accrue to the Centre in the first instance. Two-thirds of the net collections in each State are then passed on to the State Governments as long-term loans. The balance one-third of the net collections is retained by the Central Government.

8.73. Withdrawals from Small Savings are the first charge on the gross collections. Only the balance after the withdrawals have been met, that is, the net collections are shareable with the States. Since withdrawals have already been met from gross collections, the repayments of Small Savings loans by the States to the Centre are fully available to the latter for financing its capital outlays. The States retain their share of the net collections from Small Savings only for a while. With the repayment of Small Savings loans to the Centre, the States' share also eventually, becomes available to the Centre. The States benefit from Small Savings only during the maturity period of the loans from the Centre.

8.74. The Centre has sought to draw directly to itself some of the funds previously going into Small Savings so that, to this extent, the States are denied even the temporary use of the two-thirds of these funds. The Small Savings collections are made from two categories of subscribers; the households and the non-Government Provident Funds. As recently as 1982-83 their relative contribution was 70 : 30. Since the larger subscription by households has been mainly responsible, for the rapid increase in net collections observed since 1982-83, there has been a relative decline in the contribution of Provident Funds to Small Savings. Now that, with effect from 1986-87, the non-Government Provident Funds have been allowed to invest up to 85% of their net accretions in Special Deposits with Government as against the previous ceiling of 30% and the rate of interest on the Special Deposit has been raised from 11 to 12%, a further sharp decline in the Provident Funds' relative contribution is likely. The increase with effect from 1986-87 in the rate of interest allowed on the State Provident Fund and the Public Provident Fund to 12% as well as the liberalisation of withdrawal terms with respect to the latter Fund will enhance the relative attraction of these Funds and might thus also have an adverse impact on the flow of funds into Small Savings. The fact that the 1986-87 Budget Estimates have projected only 10.4% step up in net collections from Small Savings (from Rs. 4,800 crores in 1985-86 to Rs. 5,300 crores in 1986-87) as against the rise of over 32% in 1985-86 (from Rs. 3,633 crores in 1984-85 to Rs. 4,800 crores in 1985-86) is probably explained by the anticipated adverse impact of the above factors.

8.75. It may be in order to repeat here that the net collections from Small Savings are entirely a capital receipt of the Centre. Two-thirds of the net collections in a State are given by the Centre to that State as long term loans not under any Constitutional obligation but as Centre's own decision. The Constitution will not stand in the way of the centre if it chooses to reduce this proportion or to altogether abolish it. The present position means no more than that a proportion of the Central loans to the States is linked to their Small Savings collections just as another proportion of these is linked to the Central Assistance for State Plans. The States receive both categories of loans not as matter of any constitutional right but as very much of a discretionary resource transfer to the States. The entire amount of net collections is thus very much the Centre's net capital receipt and is treated as such in this document. The Central Capital receipts are given in Table 8.11.

8.76. The Capital Receipts of the Centre and the States in recent years are compared in Table 8.12.

8.77. The States' capital receipts are meagre in relation to their very large and growing requirements of capital funds to finance investment in areas of development that are, under the Constitution, within their jurisdiction. This makes them depend heavily on loans from the Centre. Indeed, the States' dependence on the Centre for capital funds is much severer than for revenue transfers. While the Constitution has provided for Devolution of revenues from the Centre to the States on the basis of the recommendations of the Finance Commission to be appointed every five years (or even earlier), it has made no provision for comparable institutional arrangements to examine and finance their requirements of capital funds. Again, while the Constitution assigned certain taxes to the States, it did not earmark any capital receipts for them. The Constitution in fact just did not take into account the States' requirements of capital funds. No wonder then that the first five Finance Commissions were asked to examine only the various aspects of the States' gap on revenue account. The reference of even the very limited question of the States' resources gap on non-plan capital account to the Sixth Finance Commission had to overcome stiff resistance put up by the Finance Ministry. The financing of the States' resource gap in relation to their Plan expenditure on Capital Account still remains very much a matter for the Centre's discretion, notwithstanding the eyewash of the Planning Commission formula (misnamed NDC formula) covering a part of the Central Assistance for State Plans. This is having serious impact on the Centre-State relations as well as the efficiency of resource use.

8.78. The problem of States' requirements of capital funds has not received due attention to-date, surprisingly not even from the States. A satisfactory and lasting solution to this problem would require that the States must be ensured, *as a matter of right*, access to capital funds commensurate with their reasonable investment requirements. The discretionary loan assistance from the Centre must be reduced to the minimum. Only a solution along these lines could create favourable conditions for cooperative Centre-State relations and greater efficiency of resource use.

Impact of states Financial dependence on centre-state relations

9.1 States' financial dependence on the Centre is having a pronounced impact on Centre-State Relations. There is a progressive erosion of the jurisdiction, authority and initiative of the States which is undermining their role in the State structure. The shifting internal balance in the State structure shows itself in the following trends :—

(1) Diminishing share of the States in the total Plan Outlay;

(2) Growing Central Outlay on State subjects;

(3) Proliferation of Central and Centrally-Sponsored Plan Schemes;

(4) Centres' tight control over the planning process in the States:

(5) Imposition of an irrational structure and ill-conceived criteria of Centre-State resources transfer; and

(6) Growing political subordination of the States to the Centre.

9.2 The above trends in Centre-State relations have been discussed below.

(1) Diminishing Share of States in Total Plan Outlay.

9.3 The division of subjects between the Centre and the States as originally laid down by the Constitution was such as to require that the States must

be allocated about 50% of the total Plan outlay if there was to be proper development of the sectors within their jurisdiction. This has not been the case in practice as shown in Table 9.1 which gives the projected and actual outlay under different Plans.

9.4 Table 9.1 shows that in the First Plan, the States' share in total Plan outlay had been projected at 61.5%. Since the shortfall in the implementation of this Plan was mainly in the Central Sector, the States, share in actual Plan outlay was as high as72.8%. In the Second Plan the States' share in total Plan outlay was depressed to 46.4%. Actual Plan outlay showed a still lower States' share (43.1%). This was mainly on account of the fact that in the Second Plan the simultaneous construction of three integrated steel plants in the Central sector increased Plan outlay in this sector to Rs. 2619 crores as against only Rs. 533 crores in the First Plan, *i. e.* almost 5 times. Accordingly the State sector had to be limited to much smaller share in total outlay. The Third Plan restored a more normal division of the plan outlay between the Centre and the States. The States' share in total plan outlay was set at 51.2 per cent and the actual outlay showed the States' share as 48.6 per cent. During the three years of the Annual Plans, the States' share in actual plan outlay was again depressed to 45.6 per cent. There was an improvement in this share to 47.6 per cent under the Fifth Plan as finalised in 1976. The actuals for the Fifth Plan period showed a further increase in the States, share to 49.2 per cent. The Annual Plan 1979-80, as implemented brought down the States, share to 47.3 per cent.

TABLE 9.1

..Indicates not available.

9.5 The sixth Plan projected the States' Plan outlay at 49.8 per cent of the total Plan outlay. The actual State Plan's outlay during 1980-81, the first year of the Sixth Plan, was 50.1 per cent. There after the States' share in Plan outlay was brought down year after year till in 1984-85 it fell to almost 40 per cent. The actual State Plan outlay during the Sixth Plan period turned out to be 44.6 per cent of the total Plan outlay as against the originally projected 49.8 per cent. The Seventh Plan has continued this policy. While the plan itself set the States' share in total Plan outlay at 44.8 per cent, the State Plans, outlay projected by the Annual Plans 1985-86 and 1986-87 has been only 40.6 per cent and 40.7 per cent of the total outlay, respectively. The actual State Plans outlay in these years might well show a still lower percentage. Going by the present trends, the State Plans outlay during the Seventh Plan period might turn out to be no more than 40 per cent of the total plan outlay. It looks that the States' share in total plan outlay has been effectivelly brought down to around 40 per cent.

9.6 This has two very undesirable consequences. Firstly, the States are unable to ensure an adequate development of the sectors within their jurisdiction. The worst sufferers have been the social services, particularly in the rural areas where, for instance, medical and health care facilities remain extremely inadequate and of very poor standard. Secondly since the States' Plan outlay cannot accommodate all that needs to be done within the Plan period, the Centre has been able to make heavy inroads into the States' jurisdiction. All this happened because, taking advantage of States' very inadequate own resources for financing the Plan, the Centre has greatly reduced their share in the total Plan outlay.

(2) Growing Central Outlay on State Subjects

9.7 The Centre, on account of its much larger Plan and non-Plan resources, is now able to spend large amounts on subjects that were originally envisaged to be wholly or very largely State subjects. Examples are given in Table 9.2.

TABLE 9.2

Police .

9.8 Public order and Police are State subjects (Entries 1 and 2 of List II) whereas Defence of India and Armed Forces are Union subjects (Entries 1 and 2 of List I). In this division of responsibility between the Centre and the States, maintenance of police forces in the Union Territories without Legislature, or of genuine para-military forces and defence intelligence establishments to aid the armed forces in the defence of the country against actual or potential external aggression, would have been the only legitimate activities for the Centre. But it went much beyond its legitimate role. It maintained greatly expanded and even newly created police outfits primarily for internal political espionage rather than for defence intelligence. It created a number of forces like the Central Reserve Police Force, the Border Security Force, the Central Industrial Security Force and the National Security Guard which were used wholly or largly in a police rather than a para-military role. The Constitution (Entry 2 of List I) made no mention of any forces of the Union other than the armed forces. This did not deter the Centre from setting up other forces, mainly of the nature of police forces, under its control. It was as late as 1976 that the Forty-Second Amendment inserted the new Entry 2-A in List I which for the first time made a mention of "any other force subject to the control of the Union". At the same time Entry 2 of the State relating to Police was amended to make it "subject to the provisions of Entry 2-A of List I". The Centre's encroachment on a major responsibility originally conferred on the States by the Constitution was thus sought to be legitimised. At the same time the States were not permitted to modernise and upgrade their police forces with regard to their equipment and weapons to enhance their capability for meeting new challenges. This obliged them to frequently requisition the Central police forces to aid civil power. By thus creating the demand for Central forces their creation, maintenance and expansion were sought to be justified.

9.9 The Centre's expanding encroachment on States' responsibility with regard to public order and police is reflected in a rapid increase in its police expenditure. It has increased from Rs. 169.24 crores in 1974-75 to Rs. 733.55 crores in 1985-86 (B. E.) that is 3.9 times.

Agriculture and Rural Development :

9.10 Agriculture and allied services and rural development are unquestionably State subjects. They are altogether excluded from List I and III. The Centre was concerned with agriculture and allied services only in respect of UTs without Legislature. Nevertheless, Centre's combined revenue and capital expenditure on agriculture and allied services (inclusive of the subsidy on indigenous and imported fertilizers but excluding the food subsidy, working expenses of Delhi Milk Scheme and Forests) has been rising rapidly and consistently. It rose from Rs. 494.76 crores in 1974-75 to Rs. 2687.78 crores in 1985-86 (B. E.), that is, 5.4 times in just 11 years.

9.11 A reflection of the Centre's growing encroachment on States' jurisdiction with regard to agriculture and rural development is that its Annual Plan outlay on these subjects now exceeds the States' outlay on these. This is shown in Table 9.3.

9.12 Table 9.3 shows that out of the total provision for Agriculture and Rural Development in the Annual Plan 1985-86, 50.2% has been allocated to Centre and 48.4% to States. Taking Union Territories without Legislature with the Centre and the UTs with Legislature with the States, the relative allocation between the Centre and the States works out to 50.6% and 49.4%. As far as development planning goes, agriculture and rural development is increasingly becoming *de facto* Central subject even though the Constitutional position remains unchanged except that the Forty-second Amendment (1976) has made forests a Concurrent instead of a State subject.

Power :

9.13 Electricity is a Concurrent subject. But til! mid-1970s, the responsibility for power development had been left very largely to the States who set up State Electricity Boards (SEBs) for the purpose. This position has been changing rapidly in recent years. The Centre, because of its superior command of resources, has entered the field of power generation in a big way. The new policy was ushered in by the setting up of two new Central enterprises in 1975 in the power sector, namely, the National Hydro Electric Corporation (NHPC) and the National Thermal Power Corporation (NTPC). The NHPC has not yet overcome its teething troubles but the NTPC is forging ahead. From 1980-81 onwards the first thermal power station (600 MW) put up by the Neyveli Lignite Corporation also began to show very good capacity utilisation. The Corporation was then asked to put up a second 630 MW station and a second lignite mine to feed it. Nuclear power stations have been all along in the Central sector. The growing share of the Central sector in the installed generating capacity is shown in Table 9.4.

TABLE 9.4

Share of the Central Sector in the Installed Generation Capacity (Utilities).

(MW)

Installed capacity	At the end of 1979-80	At the end of 1984-85	At the end of 1989-90	Increase 1979-80 over 1984-85

SOURCE :—(1) For total installed capacity : Economic Survey 1985-86, op. cit. Table 1.18, p. 125.
(2) For Central Sector capacity : Seventh Five Year Plan, 1985-90, Vol. II, Annexure 6.4, P. 125.

9.14 Table 9.4 shows that in 1979-80, the Central Sector accounted for only 12.0% of the installed generating capacity. Its share is projected to rise to 24.8% that is, more than double the 1979-80 level, by 1989-90. Of the total projected increase of 22296 MW during the Seventh Plan period. the Central Sector is anticipated to account for 41.8%. It seems almost certain that during the Eighth Plan period, the Central Sector will account for the greater part of the total addition to installed capacity. It looks that electricity generation is well on the way to becoming largely a Central subject.

9.15 One consequence of the above development has been that inadequate attention is being paid to the exploitation of the country's very large as yet untapped hydro potential. The Centre is concentrating on thermal capacity which is easier to develop and more remunerative on the business criteria. At the end of the Sixth Plan, the Central Sector's share in installed capacity was 18.1% in the case of thermal capacity and only 3.0%, with respect to hydro capacity. During the Seventh Plan period, the Central Sector will contribute 56% of the total addition to thermal capacity but only 12.3% of the addition to hydro Capacity. Even if the Centre wants to play a more significant part in hydro power development, the NHPC is in no position to undertake this task. The States have no resources for the purpose even if some of them might have the organisation and the expertise for it. This situation is having serious consequences in several regions. For instance, failure to develop Himachal's large hydro-power potential is a major constraint on the economic development of the States of Punjab, Haryana and Himachal.

9.16 Power being on the concurrent List, it is in this area that there is another issue pertaining to the role of the Union vis-a-vis the States, besides what has been stated in paragraph 6.59. There has been a tremendous expansion in the role of the Union in the generation and distribution of power in the country in the recent past, Backed by the vast financial resources, the Union has set up the National Thermal Power Corporation and the National Hydro-Electric Power Corporation, the plan programmes of which are larger than those of any State Government.

Apart from gradually overshadowing the States in an area which was earlier largely within the sphere of activities of the States, this also increases the Union's claim on scarce resources such as coal, foreign exchange and generation and transmission

equipment, which may effect the pace of activities of the States in the sector. Some mechanism needs to be set up to ensure that the expansion of the Union's activity in this field is based purely on techno-economic considerations and is not a result simply of the vast resources at the disposal of the Union. Further, Central generation is essentially meant for the States, and in practice States of the region are allocated power from Central Projects. Since the final users of the product are the States, they certainly need to have a say in the planning, execution and management of the Union's Projects and activities in this sector. At present, however the Union's control is absolutely unfettered and States have virtually no say in the matter. It is proposed that States should be given representation on the Board of Directors of the Central Corporations concerned with generation and distribution/transmission of power to ensure that benefits accrue to the States fairly and promptly.

Industry :

9.17 The Constitution made industries a State subject except for industries falling within the purview of Entries 7 and 52 of List I. In practice the exceptions have become the rule, and the rule is now the exception. The Industries have virtually become a Union subject. The Industries Development and Regulation Act passed with reference to Entry 52 enabled the Centre to bring practically all large and medium industries within its purview. The much large resources at the disposal of the Centre and the tight control exercised by it over the preparation of States Plans have together made it possible for the Centre to exploit the opportunity provided by the above Act to institute virtually a monopoly control over development of large and medium industries in the public sector. This is borne out by the distribution of Plan allocation for industries between the Centre and the States given in Table 9.5.

TABLE 9.5

Distribution of Plan Allocation for Industries and Minerals

Industries/Sector	Village and Small Industry				Large and Medium Industry

SOURCE :— (1) Seventh Five Plan 1985-90, Vol. 1, Table 3.4(b), pp. 27—29.
(2) Annual Plan 1985-86, Annexure 2.1, pp. 13—15.

9.18 Table 9.5 shows that the Seventh Plan for village and small industry has been distributed as follows : Centre, 46.7%; States, 50.1%; and Union Territories 3.2%. The corresponding allocation for large and medium industry (including petroleum and coal industries) is : Centre, 93.9%; States, 6%; and UTs., 0.1%. Taking the two segments of industry together the allocation works out to : Centre, 90.8%; States, 8.9%; and UTs., 0.3%. In the Annual Plan 1985-86, the corresponding allocation for industry and minerals is : Centre, 92.8%; States, 7.0%; and UTs., 0.2%. This suggests that, on present trends, the actuals for the Seventh Plan are likely to show the Centre's share even higher, and correspondingly the States' share even lower, than in the original Plan. Clearly, industries have virtually become a Central subject and the exceptions to Entry 24 of List II have become the rule, reducing the rule to an insignificant exception. All this has happened without a Constitutional amendment apart from the Seventh Amendment 1956 which made the defence industries an exclusive Central subject. In bringing about this, the Centre's financial resources have been a crucial factor.

Education :

9.19 Education was originally a State subject (Entry 11 of List II) except for a limited number of institutions within the purview of Entries 63 to 66 of List I. The Centre, however, exploited its superior financial resources and political hegemony to encroach on this part of States' sphere of responsibility. It did not spare even the area of school education. This expanding encroachment was legitimised in 1976 when the Forty-second Amendment transferred

Education from List II (Entry 11) to List III (Entry 25). Centre's revenue and capital expenditure on Education (including art and culture) has increased from Rs. 158.24 crores in 1974-75 to Rs. 763.87 crores in 1985-86 (B.E.), that is, 4.8 times. The shifting of Education from List II to List III has opened the way for rapid expansion of Central activity in this area. The new education perspective is reflected in the New Education Policy (1986) adopted by the Centre. In the Annual Plan 1985-86, the Centre (including UTs., without Legislature) already accounts for over one-third of the total plan outlay on Education (including art and culture, and youth affairs and sports).

Medical, Public Health, Sanitation and Water Supply :

9.20 Medical, Public Health and Sanitation are State subjects in terms of Entry 6 of List II. Water supply is an allied function. But the Centre did not hesitate to intrude into this area of State responsibility. From 1974-75 to 1985-86 (B.E.), Centre's expenditure on these subjects increased 5.4 times. In the Annual Plan 1985-86, the Centre (including Union Territories without Legislature) already accounts for one-third of total Plan outlay on these subjects.

Family Planning :

9.21 Originally the subject of family planning did not figure in any of the three Lists. The Honourable Member of the Constituent Assembly had either not yet heard of this activity, or thought it too un-Gandhian or too irrelevant to this country. Since the family planning facilities and services are akin to those of medical and public health, and since the motivational aspect of family planning may be considered an element of mass education, and since both the latter subjects were State matters, the States were the proper agency to be assigned this responsibility. But the Centre thought otherwise. Presumably it felt that it alone had the resources to bear the cost of the programme. The Centre took on itself the responsibility for planning, steering and financing the family planning programme. When this subject caught the fancy of Mr. Sanjay Gandhi, particularly when the Emergency placed *de facto* unbridled power in his hands, he made it virtually the nation's top most priority. Centre's expenditure on family planning shot up more than two-fold in a single year (1975-76). It was in this context that the Emergency regime chose to confer recognition on this subject and to bring it within the purview of the Centre. The Forty-second amendment (1976) made "Population Control and Family Planning" a Concurrent subject as Entry 20-A of List III. Though it still remains a Concurrent subject, the Centre has borne the exclusive responsibility for financing the Plan outlay on family planning.

9.22 The above are the major thrust areas for Centre's encroachment on States' Constitutional jurisdiction. This surely does not exhaust the list of Centre's intrusions. Indeed, the Centre, taking advantage of its greater access to financial resources, has been nibbling at States' jurisdiction and authority at very many points. The above instances, however, should be indicative enough of how serious and persistent have been the Centre's inroads into the original scheme of State responsibility under the Constitution.

(3) Proliferation of Central and Centrally Sponsored Plan Schemes :

9.23 An effective device employed by the Centre to impose its own development priorities and preferences also on the States' sphere of responsibility as well as to further reinforce its influence and control over the States is the Central and Centrally Sponsored (the C and CS for short) Plan Schemes. These schemes mostly pertain to States' sphere of responsibility as originally marked out in the Constitution and are in fact implemented by the States. These Schemes are mooted and drawn up by the Central Ministries without any genuine consultation with the States. The Planning Commission too has little say in the matter or even advance information. In a few cases the Schemes are financed wholly by the Centre, but generally the Centre finances only a part of the cost on the basis of a matching contribution (50 per cent in most cases) by the States. In other words, in all cases the Centre's contribution is in the nature of earmarked Central Assistance. This contribution forms part of the Central Sector Plan while the matching contribution by the States is provided out of the State Plan.

9.24 The States are generally critical of the C and CS Plan Schemes on several grounds. *Firstly* with regard to the subjects covered by these Schemes, the States are denied the initiative and opportunity to engineer development in accordance with their own ideas and preferences even in the States' sphere of responsibility. The States' role is thus reduced to implementing the Centre's ideas and preferences. *Secondly*, these Schemes result in misdirection of resources. The temptation of matching Central Assistance induces the States to take up these Schemes to the neglect or even abandonment of their own schemes even if they rate the former as of lower utility and priority and ill-conceived with regard to their specific circumstances. Most States make no secret of the fact that they have a different order of priorities and if the amount now available to them as matching Central Assistance for C and CS Schemes were instead available to as untied assistance for State Plan Schemes. a substantially different structure of development outlays will emerge. *Thirdly*, the Central Assistance made available for these Schemes cuts into the amount available to the Centre for transfer as Central Assistance for State Plans. In other words a flow of funds rated by the States as of lower utility for them is substituted for one considered by them as of greater utility. *Finally*, the States resent their having to be supplicants at the door of the Central Ministries and the opportunity that this provides to the latter to take superior *airs-vis-a-vis* the State Governments and their officials.

9.25 The States have been persistently and insistently making a number of demands with respect to the C and CS Plan Schemes. *Firstly*, these Schemes must be cut down to the minimum and must be limited to only such areas of State responsibility as are related to attainment of crucial national objectives and as such funds released as above may be

made available to the States as larger Central Assistance for State Plans. *Thirdly*, the few C and CS Schemes that are retained may be financed cent per cent by the Central Government so that no diversion of State funds to these Schemes is necessary. *Fourthly*, new Schemes may be introduced only at the beginning of a new Five-Year Plan or at the latest at the beginning of a new Annual Plan and not during the course of the Plan. *Finally*, the States may be given due freedom to adjust these schemes in the light of their specific local circumstances so that these better subserve local needs.

9.26 The above demands of the States are very reasonable, but these have met with little response from an expansionist Centre. The proliferation of C and CS Plan Schemes continues unabated and their number now literally runs into hundreds. For some reason, neither the Five-Year Plan nor the Annual Plan Documents have given even an exhaustive list of these Schemes, much less any indication as to the provision of each such Scheme. The Explanatory Memorandum on the Central Budget for 1985-86 indicated only the broad areas covered by these Schemes and the allocation for each such area. But even this information has been omitted in the Explanatory Memorandum on the Central Budget for 1986-87. In the event a list of the Schemes for which provisions had been made in the Punjab Budget for 1986-87 was compiled. These Schemes were indeed very large in number. The Budgetary Provision for the Schemes summarised by Heads/Sub-Heads of Development is given in Table 9.6.

TABLE 9.6

III. Total Provision	6,537.01	693.51	7,230.52	8,127.75	395.07	8,522.82

9.27 There might be some, possibly many, other Schemes which have not yet been availed off by Punjab or are not relevant to the States' development requirements. Even as it is the Punjab list confirms that these Schemes run into hundreds and more are being added. A perusal of the list indicates that few of these schemes are such as may be considered beyond the competence of the States to moot and plan, taking into account the specific local condition and requirements. There is no valid reason why these Schemes may not be altogether transferred to the States Plan. The Central Ministries may limit themselves to providing any inter-State co-ordination that some of these Schemes might require. The bait of earmarked Central Assistance for these schemes need not be indispensable for eliciting due co-operation from the States. If co-ordination by Central Ministries is well conceived and is persuasively put across, it is bond to receive a positive response from the States.

9.28 The Centre, however, does not seem to be inclined this way. The C and CS Plan Schemes continue to grow in number and to claim a rising proportion of the total grant assistance to States. The data for the first two years of the Seventh Plan are presented in Table 9.7.

TABLE 9.7

Total . .	5,204.22	100.0	5,588.86	100.0

SOURCE :—Explanatory Memorandum on the budget of the Central Government for 1986-87, P. 59.

*Includes North-East Council Schemes.

9.29 Table 9.7 shows that during 1985-86 (R.E.) and 1986-87 (B.E.), 50.8 per cent and 53.6 per cent of the total Central grant assistance to States for Plan purpose is for C and CS Plan Schemes. If this trend continues, the actual Central grant assistance for these Schemes over the Seventh Plan period will exceed that for State Plans by a wide margin. This is a complete violation of the NDC directive that the expenditure on C and CS Plan Schemes must not exceed one-sixth of the assistance for Plan purposes. *Secondly,* the Centre has not accepted full responsibility for financing C and CS Plan Schemes. Generally the Centre finances these schemes only partially, mostly on 50:50 basis. The State Plan resources therefore, continue to be diverted to providing the matching funds for these schemes, reducing the amount available for States' own schemes. *Thirdly,* new C and CS Plan Schemes continue to be added throughout the year and all through the Five-Year Plan period. The need to divert State plan resources for providing matching contribution for financing these schemes interferes with the implementation of States' own Plan Schemes. *Finally,* the Schemes are seldom flexible enough to allow the States to effect adjustments to local conditions and requirements. A schematic pattern of a C and CS Plan Scheme covering this vast country makes no allowance for the inevitable diversity of circumstances and preferences encountered in different States. The utility and effectiveness of many of these Schemes continues to be adversely affected on this account.

9.30 The C and CS Plan Schemes are incompatible with an efficient and co-operative federalism. With the possible exception of a few such Schemes which are related to crucial national objectives, the rest of these Schemes must be wound up or transferred to State Plans. Correspondingly the Central Assistance now being given for these Schemes must instead be made available to the States either as their own resources or as Central Assistance for State Plans.

(4) Centre's Tight Control over the Planning Process in the States :

9.31 The States do not have adequate resources to implement the State Plans even though these now account for only about 40% of the total outlay under the national Plan. In fact, some States do not have any resources whatsoever for the State Plan. In the event, the States have become crucially dependent on Central Assistance to put through even the reduced level of State plan outlays. This provides the Centre with a powerful leverage to control the planning process in the States.

9.32 The Preparation of a State Plan, whether a Five-Year Plan or an Annual Plan, usually begins only after the detailed Guidelines on the subject have been received from the Centre (Planning Commission). The Guidelines are prepared by the Centre in the light of its own priorities and assessment of the State of the economy. There is virtually no consultation with the States in drawing up the Guidelines. The Guidelines are thus truly an imposition on the States and are not the outcome of an agreed assessment arrived at after due consultation between the Centre and the States.

9.33 At about the same time, the Centre forwards to the States detailed proformae which cover every item of interest to the former. The States are required to provide on these proformae full financial and non-financial information concerning the State Plan and the State economy. This information puts the Centre fully in a position to cross-examine and pressurise the State officials during the Centre-State discussions that follow.

9.34 On receipt of detailed information with regard to financial resources for the State Plan, the Centre (the Planning Commission) sets up a Resources Working Group to undertake detailed examination of the States' estimates of their own financial resources for their respective State Plans. The Union Finance Ministry and the R.B.I. are represented in the working group. The Group discusses separately with the officials of each State, the States' estimates of its own resource for the State Plan. To the agreed estimate of a States' own resources (including the market borrowing allocated to the State by the Planning Commission and the target of additional resource mobilisation by the State insisted upon by the Planning Commission) is added the Planning Commission's allocation of Central Assistance for the State Plan to arrive at the feasible total size of the State Plan. This exercise is gone through with every State.

9.35 When the non-official information on the prescribed proformae and the States' Plan proposals have been received, the Planning Commission sets up Working Groups/Sub-Groups, comprising Central officials, on different subjects to examine *each and every* scheme proposed by the State for inclusion in the State Plan. They suggest changes (both ways) in the proposed outlay on different schemes. They even suggest deletion of some new schemes and inclusion of others. The discussions are also sometimes used by the State officials to enhance the allocation for schemes in their respective Departments. They thus try to modify the State Government's priorities to the advantage of their own Departments or pet schemes with the help of the Central officials. This gives the latter a further chance to impose Centre's priorities on the State Plan.

9.36 Usually the outlays recommended by the Working Groups far exceed the State Plan size as arrived at by the Resources Working Group. The concerned Adviser in the Planning Commission matches the two by cutting down the outlays recommended

by the Working Groups for different Heads/Sub-Heads. In applying these cuts, the Adviser is naturally guided by the Planning Commission's intersectoral priorities. He announces the new allocations at the so called "wrap-up" meeting with the top State officials. This meeting provides a semblance of consultation with the State.

9.37 The State Plan size is finalised at the meeting between the Deputy Chairman of the Planning Commission and the State Chief Minister. The estimate of Central Assistance available for the State Plan originally indicated by the Planning Commission Officials and adopted by the Resources Working Group usually holds back a small proportion of the Central Assistance which is anticipated to be available. This amount is offered by the Deputy Chairman at the above meeting as an expression of the Centre's generosity and its consuming concern for an adequate State Plan, but usually on condition that the Chief Minister agrees that the State would go in for a higher amount of additional resource mobilisation than it had agreed to undertake at the officials level discussions. The Planning Commission Adviser, usually in consultation with top State officials, once again re-adjusts the sectroral allocation to the somewhat higher Plan size agreed to at the above meeting. The State Plan as thus finalised is then formally approved by the Planning Commission.

9.38 The release of Central Assistance to a State is subject to approval by the Planning Commission of the *entire* State Plan even if this Assistance finances only a small fraction of the total Plan. Furthermore, in order to make sure that among the approved Plan schemes the State will pay particular attention to the implementation of schemes to which the Centre attaches high priority, the Planning Commission earmarks the approved outlay on these schemes. This means that any shortfall in approved outlay on these schemes will be penalised by a corresponding proportionate reduction in Central Assistance for the State Plan. The Centre, indeed, exercises a tight control even over the 40% Plan outlay that still remains within the purview of the States. Any State priorities that do not accord with the Centre's priorities can be incorporated into the State Plan only by stealth, taking advantage of the ignorance of the Planning Commission officials about the true facts of the State economy and not openly.

(5) Irrational Structure and Criteria of Centre-State Resources Transfer :

9.39 The Constitution shows a serious internal imbalance in that the division of financial resources between the Centre and the States mismatches the allocation of responsibilities between them. This imbalance shows up as a large and growing gap between the States' total expenditure and their own receipts on revenue and capital account. Since the States' borrowing from outside the country is ruled out by Article 293(1), the only way to fill this gap is resources transfer from the Centre to the States. Since the gap has now grown to huge dimensions, the resources transfer has to be correspond-dimensions, the resources transfer has to be correspondingly large.

9.40 The Constitution pays scant attention to the modalities and criteria of the required resources transfer. There are only few provisions relating to this subject. These are mentioned below.

9.41 Article 270 provides that the taxes on income other than agricultural income shall be levied and collected by the Centre but the net proceeds from these, after certain prescribed deductions, shall be shared with the States. However, no minimum percentage is prescribed as the States' share. Even a token share should meet the Constitutional requirement. Moreover, Article 271 provides a loophole to the centre by excluding from the divisible pool and surcharge on income tax for purposes of the Union. For many years, the Centre made use of this loophole to deny the States their due. The surcharge on income-tax has been abolished only with effect from the assessment year 1986-87. A further big loophole was provided by the fact that under clause(4)(A) of Article 270 a corporation tax was excluded from the income tax and thus made non-shareable with the States. The Centre made use of this loophole by an amendment of the Income Tax Act in 1959 which treated the Income Tax on companies as Corporation Tax and hence non-shareable with the States.

9.42 The Constitution has made Customs Duties, a high yielding tax, altogether nons hareable with the States. In the case of Union Excise Duties, a high yielding tax with the highest growth potential, the Constitution only permitted under Article 272 sharing of the net proceed of the Duties with the States if the Parliament by law so provided, but it did not make this mandatory.

9.43 The Constitution has said just nothing on the principles and criteria for distribution of the States' share of Income Tax and the Union Excise Duties among the States *inter-se*. It left the distribution to be determined by Parliament by law on the recommendations of the Finance Commission to be appointed under Article 280.

9.44 Article 268 lists two minor taxes which shall be levied only by the Union but which shall be collected and appropriated by the States where leviable. Article 269 provides that certain duties and taxes listed under that Article shall be levied and collected by the Centre but shall be assigned to the States. The net proceeds from any such duty or tax, except the amount attributable to the Union Territories, shall be distributed among the States where it is levied in accordance with the principles of distribution laid down by Parliament by law.

9.45 Under Article 275(1) such sums as Parliament may be by law provide shall be paid out of the Consolidated Fund of India in each year as grants-in-aid of the revenues of such States as Parliament may determine to be in need of assistance, and different sums may be fixed for different States. Under the first Proviso to Article 275(1), grants-in-aid of revenue shall be made to a State as may be necessary to enable that State to meet the cost of approved schemes of development for promoting the welfare of the Scheduled Tribes or raising the level of administration of the Scheduled Areas. The second Proviso to Article 275(1) provides for specified grants-in-aid of revenues of the State of Assam.

9.46 Article 280 provides that the President shall, within two years from the commencement of the Constitution and thereafter every five years or earlier, constitute a Finance Commission consisting of a Chairman and four other Members to be appointed by the President. It shall be the duty of the Finance Commission to make recommendations to the President as to—

(a) the distribution between the Union and the States of the net proceeds of taxes, which are to be, or may be, divided between them under Chapter I of Part XII of the Constitution and the allocation between the States of the respective share of such proceeds;

(b) the principles which should govern the grants-in-aid of the revenues of the States out of the Consolidated Fund of India;

(c) Any other matter referred to the Commission by the President in the interests of sound finance.

9.47 Under Article 282 the Union or a State may make any grants for any public purpose, notwithstanding that the purpose is not one with respect to which Parliament or the Legislature of the State, as the case may be, may make laws.

9.48 Article 293 (2) enables the Government of India, subject to any condition laid down by Parliament, to make loans to any State or give guarantees in respect of loans raised by any State.

9.49 Under the above provisions five channels for Centre-States resources transfer have developed : (i) Devolution of resources on the recommendations of the Finance Commission with reference to Articles 269, 270, 271, 272, 275(1) and 280; (ii) central Assistance for State Plan Schemes with reference to Articles 282 and 293(2); (iii) Central Assistance for Central and Centrally Sponsored Plan Schemes with reference to Articles 282 and 293(2); (iv) Debt relief on the recommendations of the Finance Commission with reference to Article 282 and 233(2); and (v) other non-plan grants and loans with reference to Articles 282 and 293(2). The Structure of resources transfer in recent years is brought out in Table 9.8.

TABLE 9.8

Resources Transfer from the Centre to the State

	1985-86 (R.E.)		1986-87 (B.E.)	
	Rs. crores	Per cent	Rs. crores	Per cent
1	2	3	4	5
1. Devolution of Resources	8,569.13	39.1	9,432.83	41.8

SOURCE :—Central Government Budget Documents for 1986-87.

*Excludes the following loans from the Centre:—

	1985-86 (R.E.)	1986-87 (B.E.)
1. Ways and means advances	1,200.00	800.00
2. Short-term loans for fertiliserx and other agricultural inputs	250.00	255.00
3. Loans to clear over- drafts from the R.B.I.	1,628.00	..
	3,078.00	1,055.00

9.50 Devolution on the basis of Finance Commission's recommendations is the most important channel for resources transfer. It accounted for 39·1% and 41·8% of the total transfer in 1985–86 (R.E.) and 1986–87 (B.E.), respectively. The respective contribution of the States' share in Central taxes and the Central grants to this flow was 34·2% and 4·9% of the total resources transfer in 1985-86 (R.E.) and is estimated at 36·2% and 5·2% in 1986-87 (B.E.).

9.51 The second most important channel of resources transfer is Central Assistance for State Plans on the recommendations of the Planning Commission. It accounted for 29·2% and 28·0% of the total resources transfer in 1985-86 (R.E.) and 1986-87 (B.E.), respectively. In this category, the grants constitute 11·7% of the total resources flow in each of the two years and the loans were 17·5% and 16·3% respectively.

9.52 The Central Assistance for Central and Centrally Sponsored Plan Schemes is a relatively growing flow. It formed 12·93% and 14·0% of the total resources flow in 1985-86 (R.E.) and 1986-87 (B.E.) respectively. The bulk of the assistance is made available as grants and only a very small proportion as loans. This flow has been discussed above.

9.53 The Non-Plan transfers formed 18·3% and 16·1% of the total resources flow in 1985-86 (R.E.) and 1986-87 (B.E.). This data excludes ways and means advances and short-term loans for fertilizers and other agricultural inputs as these are expected to be re-paid during the same year. The loans granted to State to clear the over-drafts from the R.B.I. have also been excluded as if the present scheme to avoid over-drafts continues to be effective, there will be no more loans of this sort.

9.54 Among the non-plan loans, the Small Savings loans equivalent two-thirds of the net collection of Small Savings in the States are by far the most important item accounting for 13·2% and 14·2% of the total resources transfer during 1985-86 (R.E.) and 1986-87 (B.E.) respectively.

9.55 The Eighth Finance Commission, whose recommendations cover the five-year period 1984-85 to 1988-89, granted debt relief to States on Central Loans in two forms : (i) write off of repayment of loans and (ii) rescheduling of loans. The relief in the two forms over the five-year period is estimated at Rs. 405·20 crores and Rs. 1880·19 crores, respectively, making a total of Rs. 2285·39 crores (excluding relief of Rs. 117·08 crores for the re-payment of Small Savings loans in 1985-86)*. The mode of write off of repayment is that the Centre gives Non-Plan grants to States which are utilised by them to make the repayment which is to be written off. Such grants formed 0·5% and 0·1% of the total resources flow during 1985-86 (R.E.) and 1986-87 (B.E.). The annual estimates of the amount of debt relief on account of rescheduling of Central loans are not available.

9.56 The first two channels of resources flow from the Centre to the States are the most important and account for around 70% of their total flow. They have their respective negative features which need to be rectified. These features are discussed below:

(i) *Devolution of Resources*

9.57 Devolution of resources to the States is on the basis of the recommendations of the Finance Commission. So far the Finance Commission has been constituted eight times. The recommendations of the Eighth Finance Commission cover the period 1984-85 to 1988-89. Each Finance Commission is an *ad-hoc* body. It goes out of existence after submitting its report. The Chairman and the four members are all appointed by the President (the Union Executive) without any consultation whatsoever with the States. Members might render part-time or full-time service to the Commission. Since the Sixth Finance Commission, a Member of the Planning Commission who is concerned with the Financial Resources Division of that body is appointed concurrently also a member of the Finance Commission to provide a link between the two Commissions. Generally at least one member of the Finance Commission is a former or even, for a while, a serving official of the Union Finance Ministry. The crucial post of the Secretary of the Finance Commission is usually held by a senior official of the Finance Ministry. Sometimes he is appointed a Member-Secretary of the Commission to give him a still higher status. The research staff of the Commission is mostly taken on deputation from among the staff of the union Ministries, particularly the Ministry of Finance and the Planning Commission. Clearly such a Commission just cannot remain uninfluenced by the thinking of the Union Government (particularly, the the Ministry of Finance) on the subjects referred to it. In any case, the Commission's freedom of approach is severely constrained by the very detailed terms of reference laid down by the Union Government which virtually prescribes the approach to be followed.

9.58 The Finance Commission is required by its terms of reference to have regard to, among other considerations, "the existing practice in regard to determination and distribution of Central Assistance for financing State Plans". The existing practice is that the determination of the total Central Assistance for State Plans and the share of each State in it is the responsibility of the Planning Commission. The Central Assistance for the Central and the Centrally Sponsored Plan Schemes is, by its very nature, the privilege of the concerned Union Ministers. Thus, in practice, the main concern of the Finance Commission is the States' Non-Plan gap on revenue account.

9.59 By the time the terms of reference of the Sixth Finance Commission came to be determined, it had become quite clear to the Planning Commission that the non-plan capital gap had also become an important problem for many States. They took up the matter with the Finance Ministry and at their insistence the States' non-plan capital gap was included in the terms of reference. This practice has continued ever since. Nevertheless, the non-plan revenue gap remains by far the most important concern of the Finance Commission.

9.60 In working out their recommendations for devolution of resources with respect to the Non-plan revenue gap, the successive Finance Commissions have adopted the gap-filling approach. This implies that the total amount of devolution and its distribution among the States must be so determined as not to leave an unfilled non-plan revenue gap in the case of any State, even if in the process some States might acquire substantial surpluses on non-plan revenue account.

9.61 The first step in the implementation of this approach is to work out the non-plan revenue gap. For this purpose, firstly, the revenue resources of the States are projected for the reference period on the basis of levels of taxation likely to be reached at the end of the base year, that is, the year immediately preceding the reference period for the Finance Commission recommendations. The revenue from additional taxation that might be undertaken by the States during the reference period is considered a resource for financing the State Plan. In working out the revenue projections, the Commission is required to take into account the scope for better fiscal management and to take credit for reasonable returns on States' investments in irrigation and power projects, transport undertakings, industrial and commercial enterprises and the like. This exercise is done on the basis of only State taxes, that is, without taking into account any Devolution from the Centre. Secondly,

*Report of the Eighth Finance Commission 1984, Annexure XIV-6, p. 68.

the non-plan revenue expenditure of States is projected for the reference period taking into account, *inter alia* :

(i) the provision for emoluments and terminal benefits of Government employees, teachers and employees of local bodies as obtaining on a date specified by the Commission, but with reference to objective criteria rather than actual increases that might have been given effect to;

(ii) commitments with regard to transfer of funds to local bodies and aided institutions;

(iii) adequate maintenance and upkeep of capital and assets and maintenance of Plan Schemes completed by the end of the base year; and

(iv) the scope for economy in expenditure.

In practice the projections of revenue and non-plan revenue expenditure are worked out by a reassessment of States' forecasts of these by following a combination of a positive and a normative approach. The excess of the projected non-plan revenue expenditure over the projected revenue gives the estimated non-plan revenue gap of States. The Eighth Finance Commission exercise showed that 6 States were in surplus even at this stage, that is, had a negative non-plan revenue gap. The other 16 States showed a deficit.

9.62 The second step is to determine the States' total share in Central taxes and the share of each state in the total divisible pool of taxes. The States generally prefer devolution of taxes rather than grants-in-aid under Article 275*. This is because "whereas taxes are buoyant, grants-in-aid are fixed sums, whose value is eroded, in real terms over the years.'** The States which have a pre-Devolution surplus or a very small deficit have an added reason for this preference. They will receive no or very little revenue gap grants, whereas they can hope to have a share in the divisible pool of taxes. On the other hand, the cost of Devolution to the Centre will be the minimum if almost the entire amount is transferred to the States as 275(1) grants with the States receiving only a token share in income to meet the requirements of Article 270. Then the total Devolution would need to be no more than the aggregate non-Plan revenue gap of deficit States plus the amount of income tax that might have gone to surplus States as their share in the divisible tax pool and wasted from the stand-point of filling up the revenue gap of deficit States.

9.63 It follows that a very important implication of the gap-filling approach is that the Devolution is minimized to the extent it goes to fill the non-plan revenue gap of the deficit States *instead of* merely adding to the non-plan revenue surplus of the surplus States. There are thus two ways to minimize the Devolution amount :

(i) by maximizing its component of revenue gap grants and

(ii) by so designing the formula for distribution of the States share of Central taxes as to ensure that the maximum proportion of the divisible pool of Central taxes goes to the deficit States and is utilised to fill the non-plan revenue gap.

The States preference for share of Central taxes as against revenue-gap grants on the ground of the former being buoyant can be overcome, at least in the case of the deficit States, by introducing an element of escalation in the recommended grants. This, indeed, has been done by the Eighth Finance Commission. The grants estimated to be necessary in different years to fill the remaining gap, after share of taxes has been taken into account, are recommended to be escalated by 5%, 10%, 15%, 20% and 25% in the successive five years of the reference period of the Commission. Clearly, if necessary, even higher rates of escalation could be recommended, say, 10%, 20%, 30%, 40% and 50%, respectively. Nevertheless the successive Finance Commissions have mainly resorted to the second device. The formulae for distribution of States' share of Central taxes have been made more and more "progressive", that is, such criteria of *inter se* distribution have been devised as ensure that the maximum of the divisible pool of taxes goes to the deficit, generally the relatively lower income, States while the minimum of its goes to the surplus, generally the relatively higher income States. The low income States believe that the higher income States have been squeezed, as befits this socialist Republic, for their sake. Many millions of others in the country, including those who ought to know better, also believe the same. The reality is, however, very different. Such of the deficit States as, in spite of being allowed a very generous share of the divisible pool of taxes, continue to show a deficit although a reduced one, do not benefit even by a single paisa from the Finance Commission's highly "progressive" stance. The deficit States who, as a result of a liberal share in the divisible amount of Central taxes, acquire a revenue surplus benefit only to the extent this surplus exceeds the one which would have accrued to them as a result of a more even distribution of the share of taxes among all the States. The beneficiary of the extremely "progressive" posture of the Finance Commission is not the above categories of States but very largely the Centre, which appoints the Finance Commission. It is not for the sake of the deficit States but for the benefit of the Centre that the Finance Commission does the superficially very progressive mask and penalises the surplus States for the relatively higher *per capita* SDP of their people. The validity of the above conclusion is demonstrated by Table 9.9 on the basis of the data thrown up by the Eighth Finance Commission.

9.64 Table 9.9 shows that, under the gap-filling approach, the required Devolution would be Rs. 18,484.83 crores under Assumption I and Rs. 37,195·70 crores under both Assumptions II and III. The required Devolution is the minimum under Assumption I. Being entirely in the form of revenue gap grants, no part of it is wasted from the point of view of filling the pre-devolution non-plan revenue gap as none of it goes to the States that had a non-plan revenue surplus even prior to Devolution.

9.65 Under Assumption II the required Devolution of Rs. 37,195·70 crores exceeds the required Devolution of Rs. 18,484·83 crores under Assumption I by Rs. 18,710·87 crores. This is because, firstly, the entire amount of category A States' share of Central taxes, that is, Rs. 9,229·64 crores merely added to the pre-devolution non-plan revenue surplus of these States. It was complete 'waste' from the stand point of gap-filling. Secondly, of the Rs. 18,253·89 crores

*Report of the Eighth Finance Commission 1984, Paragraph 2.7, p. 6.

NOTES :

Categories of States :

A. States which had a non-plan revenue surplus even before Devolution, namely, Gujarat, Haryana, Karnataka, Maharashtra, Punjab & Tamil Nadu.

B. States which had non-plan revenue deficits before Devolution but acquired a revenue surplus after share of Central taxes, namely, Andhra Pradesh, Bihar, Kerala, Madhya Pradesh, Rajasthan and Uttar Pradesh. Rajasthan would have a small deficit during 1984-85 and a surplus during 1985-89.

C. States which had non-Plan revenue deficit even after share of Central taxes, namely, Assam, Himachal Pradesh, Jammu and Kashmir, Manipur, Meghalaya, Nagaland, Orissa, Sikkim, Tripura and West Bengal.

Assumptions :

I. No States' share of Central taxes.

II. Including States' share of Central taxes other than 5% of Union Excise Duties.

III. Including also States' share of 5% of Union Excise Duties.

of category B States' share of Central taxes, only Rs. 8,772·66 crores were utilised in reducing the pre-devolution non-Plan revenue gap of these States from Rs. 8,789·90 crores to Rs. 17.24 crores. The balance Rs. 9,481.23 crores of their share of Central taxes was "wasted" in providing these States with a non-plan revenue surplus. The total "wastage" of Rs. 18,710·87 crores of States' share of taxes (Rs.9,229·64 crores in the case of category A States and Rs. 9,481·23 crores with respect to category B States) from the stand point of gap filling was responsible for the equivalent increase in the required Devolution under Assumption II. *Clearly that part of States' share of Central taxes which merely goes to augment the non-plan revenue surplus of some States adds to the Centre's burden or required total Devolution by and equivalent amount.*

9.66 It may also be noted that under Assumption II, the Rs. 5,684·05 crores which went to the revenue deficit category C States as their share of central taxes did not add a single paisa to the total Devolution entitlement of these States. Their Devolution entitlement remained completely unchanged as the entitlement to revenue gap grants was reduced precisely by the amount of their share of Central taxes. The second important conclusion that follows is that *The States' share of Central taxes which only reduces the non-plan revenue gap of deficit States makes no addition whatsoever to the Centre's total burden of required Devolution. Nor does it make any addition to the deficit States, total entitlement to Devolution.* Only the composition of that Devolution changes. There is an increase in the component of share of taxes but at the same time an equivalent decrease in the component of revenue gap grant.

9.67 It is obvious that under the gap filling approach, a highly "progressive" formula for distribution of States' share of Central taxes among the States *entirely* benefits the Centre by minimising its total burden of Devolution at the cost of the revenue surplus States and that it does not at all benefit the revenue deficit States who nevertheless might be bamboozled into believing that the revenue surplus States' tail has been twisted solely for their sake. This is brought out even more vividly by the fact that under Assumption III the total Devolution (including both States' share of Central taxes and revenue gap grants) remained precisely the same amount as under Assumption II, namely, Rs. 37,195·70 crores even though in this case the States received a higher share of Union Excise Duties, that is, 45% instead of 40%, where did the extra share of taxes go? The extra 5% of Union Excise Duties was distributed among the States who continued to have a non-plan revenue deficit even after their share of other taxes, including 40% of Union excise duties had been taken into account (as under Assumption II). Since no part of the extra 5% of Union Excise Duties went to the States who already had non-plan revenue surplus at this stage, none of it was wasted from the standpoint of gap filling. The entire amount went into reducing the revenue gap of States and hence their entitlement to revenue gap grants. The extra amount that the Centre had to pay as 5% additional share of Union Excise Duties was fully compensated for by the lower amount of the required revenue gap grants. There was just *no* additional net burden on the Centre of the extra share of Union Excise Duties. Nor did the deficit (category C) States who received a share in the extra 5% of Union Excise Duties thereby get a paisa more of total Devolution as this extra amount was fully neutralised by the reduced entitlement to revenue-gap grants. Clearly, the extra 5% share of Union Excise Duties which the Eighth Finance Commission granted to the States was a cent per cent public relations exercise at absolutely no extra cost to the Centre. It was made out that the Centre had been asked to forego another 5% of Union Excise Duties for the sake of the deficit State. And yet the Centre did not have to part with a single paisa more than what it would have in any case to shell out under the gap filling approach, nor were the deficit States this way given a paisa more than what they would have in any case been entitled to receive. Indeed, this recommendation of the Eighth Finance Commission was a magic show at its professional best !

9.68 The "very progressive" criteria adopted by the Eighth Finance Commission for *inter-se* distribution of States share of Central taxes implied in the context of the gap-filling approach that, of the estimated Rs. 35,682·58 crores of States share of Central taxes recommended by the Commission, as much as Rs. 16,971·71 crores (*i.e.* 47.5% of the total) benefited the Centre by reducing its liability for revenue gap grants from the original Rs. 1,848·43 crores to the final Rs. 1,513·12 crores. Thus the Centre was by far the biggest beneficiary of the tax sharing formula. The second largest beneficiary was the category B States. They benefited on a net basis to the extent of revenue surplus of Rs. 9,481·23 crores which resulted from their share of the Central taxes. This was 26·6% of the total amount of the divisible pool of Central taxes. The six States in category B included the four Hindi-speaking States of U.P., Bihar, Madhya Pradesh and Rajasthan, the low-income heartland of India which is increasingly the main power base of the ruling party at the Centre and, in consequence, has a tremendous political clout with the Central government. The four States share of Central taxes transformed their large pre-devolution non-plan deficit of Rs. 7,308·49 crores into an equally large revenue surplus of Rs. 6,948·92 crores. The balance Rs. 9,229·64 crores that is 25·9% of the total divisible pool of Central taxes, accrued to category A states whose non-plan revenue surplus increased from the pre-devolution level of Rs. 8,063·94 crores to Rs. 17,298·58 crores. *The ten States of Category C were the only group which received no net benefit from their share of Central taxes as their entitlement to revenue gap grants was as a result reduced exactly by the same amount.*

9.69 The gap-filling approach and the "progressive" tax distribution formula adopted in conjunction with it have other important fiscal implications. Firstly, the Category C States have no incentive to undertake tax and non-tax measures for additional revenue. Whatever is their pre-devolution non-plan revenue deficit, it will be taken care of by the Finance Commission, partly by their share of Central taxes and the balance by revenue gap grants. A better outcome, namely, a post-devolution non-plan revenue surplus is generally not within their reach no matter how "progressive" might be the tax sharing formula that the Finance Commission might recommend. All that they can hope for as a result of vigorous tax and non-tax measures for additional revenue is a reduced pre-devolution non-plan revenue deficit. But this has no logic for them. The only result of this will be a corresponding reduction in their entitlement to devolution, leaving them in the same no deficit but also no surplus post-devolution position which is in any case ensured to them under the gap-filling approach. There is then no sense in incurring the odium of unpopular revenue raising measures. On the other hand, if lavish expenditure results in their pre-devolution non-plan revenue gap going up, it is not their headache but that of the Finance Commission and the Centre. For these advantages, Category C is very welcome status for many States. Otherwise, it will be difficult to explain why States like West Bengal, Himachal Pradesh and J & K who occupy the 5th, the 6th and the 11th position from the top with respect to per capita SDP figure among Category C States. Others may well be preparing to join their

ranks in the reference period of the Ninth Finance Commission which is expected to be constituted in mid-1987.

9.70 The incentive to Category B States to mobilise revenues and to economise on non-plan expenditure is also very weak. On account of the political clout of the heartland States, who form two-thirds of this category, they can count that if, as a result of lax fiscal discipline, they land themselves in bigger pre-devolution non-plan revenue deficits, the next Finance Commission will make the tax sharing formula even more "Progressive" to ensure that they nevertheless end up with substantial post-devolution non-plan revenue surpluses. Besides their political clout, these States know that in this matter their and the Centre's interests converge. A "More progressive" tax sharing formula will enable the Centre to reduce its additional Devolution liability on account of enlarged pre-devolution non-plan revenue deficits of Categories B and C States, at the expense of the surplus (Category A) States. The worst that can happen to a Category B States as a result of financial indiscipline is that it may slip into Category C, which means that its post-devolution non-plan revenue surplus may be reduced to zero. This is by no means a frightful prospect for the four heartland States of this category. They can be reasonably sure that, in the event, on account of their powerful influence at the Centre, the Planning Commission "formulae" for distribution of market borrowings and the Central Assistance will be made still more "progressive" to give them a larger share of these at the expense of the surplus States, so as to ensure that the former have adequate State Plan size.

9.71 Category A States are the only ones who definitely stand to lose by financial indiscipline. This will, by lowering their post-Devolution non-plan revenue surplus, almost certainly adversely effect their State Plan size. The result has been that the present system of Devolution of resources shows a strong negative correlation between the States' estimated revenue at existing rates from own tax and non-tax resources over the reference period and their respective devolution entitlement per Rs. 100 of own revenues over the same period. This is shown in Table 9.10.

9.72 Table 9.10 shows that for every Rs. 100 of revenue expected to be raised from State taxes over the period 1984-89, Haryana and Punjab would receive Rs. 15·6 and Rs. 16·3 as their share of Central taxes, respectively, whereas U.P. and Bihar would receive Rs. 84·2 and Rs. 142·3 and the neighbouring State of Himachal Pradesh, as much as Rs. 159·5 that is, about 10 times as much as Haryana and Punjab receive. The system of Devolution as evolved in India effectively divorces total financial resources available to different States from the revenue raised by them from their own tax and non-tax resources. Such a system might not have been so disastrous for financial discipline if it had been concerned with transfer of a few hundred crores. But as seen in Table 9.9, Devolution recommended by the Eighth Finance Commission formed as much as 39·3% of the State's total estimated own tax and non-tax revenues during 1984-89. A highly discriminating system of Devolution covering such huge transfers to the States could not but be ruinous from the standpoint of building up a healthy fiscal system. It has given immense opportunities to the Centre to play off, through the Finance Commission, one group of States against the other and effectively undermine their autonomy. Such a brazenly discriminatory system can never be the basis of stable regime of cooperative Central-State relations geared to vigorous national development.

(ii) For columns 4 and 5 Chapter (xiii) tables 1 and 2.

9.73 The Finance Commission's completely one-sided approach of severely penalising growth performance and financial discipline and handsomely rewarding economic inefficiency and financial laxity has predictably led to a continued increase in States dependence on Devolution from the Centre. The Devolution has increased from a mere Rs. 447 crores in the First Five Year Plan period to Rs. 39452 crores for 1984-89, the five year period covered by the Eighth Finance Commission that is, 88 times. The Eighth Finance Commission had estimated the Centre's non-plan revenue surplus for the period 1984-89 at Rs. 39123 crores*. In other words, the Commission had to denude the Centre of its entire estimated non-plan revenue surplus and a sizeable sum in addition to provide for the required Devolution. This amount of Devolution has indeed been an important factor, through by no means the only one, for the severed deterioration in the revenue position of the Centre in recent years. The Centre is now incurring large and growing deficits on revenue account, in spite of the fact that provides for too large items of expenditure which are unmistakably of the nature of revenue expenditure, on the capital account. These are (i) Defence capital outlay (Rs. 1098 crores in the 1986-87 Budget) and (ii) the subsidy on imported fertilizers (Rs. 250 crores in the 1986-87 Budget). The revenue deficit implies that the Centre is financing also a part of its revenue expenditure by borrowing. In consequence, its liability is shooting up. Beyond doubt, interest will be the largest item of revenue expenditure in the 1987-88 Budget, exceeding even the Defence expenditure. Contrary to the general impression prevailing among the States, the Centre's financial power is based not on its superior revenue position but on its grab of the bulk of the public sector capital receipts.

9.74 In recent years the net saving (that is, the true revenue surplus) by the Central Government (including retained profits of Departmental commercial undertaking) has been negative and shows a progressive deterioration : 1983-84, Rs. (—) 674·2 crores; 1984-85 (R.E.), Rs. (—) 1702·9 crores; and 1985-86 (B.E.), Rs. (—) 3404·2 crores@. This has been an important factor in the steady deterioration in the country's rate of net saving in recent years from 20·0% in 1978-79 to 16·1% in 1984-85@@.

(ii) *Central Assistance for State Plans*

9.75 Central Assistance for State Plans involves two basic issues : (i) its total amount and (ii) its distribution among the States. The financial dependence of the States and their conflicting interests in this matter have inhibited the States from firmly demanding that a rational approach must be evolved to both these issues.

Total Amount of Central Assistance

9.76 Ideally, the total amount of Central Assistance ought to be the excess of the rationally determined total outlay under the State Plans and the State's own resources for these Plans. There are at present several difficulties in adopting this approach. The rational procedure to estimate the reasonable total outlay under the State Plans would be to first distribute the envisaged total outlay on the Public Sector Plan among the various Heads and Sub-Heads of Development. The outlay allocated to each Head/Sub-Head could then be divided between the Centre and the States in accordance with their respective Constitutional responsibility for different matters, with due regard to the relative suitability of the two levels of government for handling the different projects and programmes of development. There are, however, major difficulties in applying the above approach. Firstly, the existence of the Concurrent List blurs the division of responsibility between the

Centre and the States. The Forty-second Amendment (1976) has made further important additions to this list. Secondly, the Centre's superior command of resources enables it to pull to itself even programmes which have to be implemented through the agency of the States. The Centre gives grants and loans to the States for implementing these so called Central and Centrally Sponosred Plan Schemes. The Central outlay on these schemes forms a sizeable proportion of the Budgetary outlay ion the Central Sector Plan. This is shown in Table 9.11.

TABLE 9.11

Centre's Budgetary Outlay on Central and Centrally Sponsored Schemes as a Percentage of its Total Budgetary Outlay on the Central Plan

	Unit	1985-86 (R.E.)	1986-87 (B.E.)
1. Centre's Budgetary Outlay on Central and Centrally Sponsored Schemes . . .	Rs. crore	2,818.62	3,167.12
1. Grams . . .	,,	2,645.51	2,997.44
2. Loans . . .	,,	173.11	169.68
2. Centre's Budgetary Outlay on the Central Plan	,,	13,231.38	13,617.33
1. Central Sector Plan	Rs. crore	20,093.97	22,300.00
2. Less : Amount Financed by the Extra-Budgetary Resources of the Central Enterprises	,,	(—)6,862.59	(—)8,682.67
3. (1) as a Ratio of (2)	%	21.3	23.3

9.77 Table 9.11 shows that the Central Budgetary outlays on Central and Centrally Sponsored Plan Schemes as a ratio of the total Budgetary Outlay on the Centtral Plan was; 1985-86 (R.E.), 21·3%; and 1986-87, 23·3%. This order of outlay by the Centre on schemes; implemented by the States confuses the line of demarcation between their respective spheres of development responsibility. Thirdly, the Centre has abused its large financial resources to brazenly encroach even on areas of development such as agriculture which under the Constitution, unquestionably fall within the State's sphere of responsibility. Fourthly, the Constitution authorised the Centre in certain cases to unilaterally add to its development responsibility at the expense of the States by making the prescribed declaration by or under a law enacted by Parliament. It can do this, for instance, by declaring (i) a road as a national highway, (ii) an inland waterway as a national waterway, (iii) a port as a major port, (iv) an industry as one the control of which is expedient in the public interest, (v) an inter-State river and river valley as one the regulation and development of which is expedient in the public interest, and (vi) an institution as one of national importance. The residuary subjects, that is, those not included in the State or the Concurrent Lists are the responsibility of the Centre. As a result the line of demarcation of responsibility between the Centre and the States is further undermined.

9.78 There are also difficulties in defining unambiguously the concept of State's own resources for the Plan. For example, the State's market borrowings are counted as their own resource but, as mentioned above, the State's share in the total market borrowings and its *inter-se* distribution among the States is very much a matter of arbitrary allocation by the Centre. Similarly the State's share in net collections from Small Savings is determined by the Centre. The State Electricity Board's borrowings from the Rural Electrification Corporation (R.E.C.), financed very substantially by investments of the Centre in this Corporation, are counted as the S.E.B.'s contribution and hence are a component of the State's own resources. Discretionary non-plan grants from the Centre go to reduce the State's non-plan expenditure that has to be met from their own resources. They thus add to the amount available to the States for financing their Plans. The Additional Resources Mobilisation (A.R.M.) by the States and their enterprises, to the extent of the net revenue accrual from it, adds to the State's own resources for the Plan. No rational approach has yet been evolved towards determining the A.R.M. target for a State. In practice, the projected A.R.M. is usually more the result of a battle of wits and nerves between the Planning Commission and the individual State than of any objective criteria on the subjects.

Distribution of Central Assistance among the States

9.79 The above difficulties have made any exercise aimed at deriving the quantum of the required Central Assistance as the excess of the rationally determined State Plan outlays over the State's own resources a rather arbitrary affair. Upto the Third Plan, the Central Assistance of all States was in fact determined by the above procedure. But on account of the several arbitrary aspects of this procedure, there was increasing dissatisfaction among the States against it. This led to the adoption of the Gadgil Formula in September, 1968. This formula did not go into the question of how to determine the total quantum of Central Assistance. It assumed that the total quantum had somehow been determined and limited itself to laying down objective criteria for the distribution of the total amount of Central Assistance among the States *inter-se*. The following objective criteria were adopted. A lump-sum amount was to be set apart for special category states (which then included Assam, J & K and Nagaland). The balance was to be distributed among the remaining States (i) 60% on the basis of population, (ii) 10% on the basis of the per capita income (State Demestic Product) among the States having per capita income below the national level, (iii) 10% on the basis of tax effort, (iv) 10% for continuing irrigation and power projects, and (v) 10% for special problems of States.

9.80 The Fourth Five-Year Plan (1969-74) allocated the Central Assistance entirely on the basis of the Gadgil Formula. In the Fifth Plan (1974-79) as finalised in 1976, 90·8% of the total Central Assistance was allocated under the Gadgil Formula, the balance 9·2% was to be distributed under two additional criteria, namely, (i) assistance for externally aided projects (1·7%), and (ii) special assistance for area programmes (7·2%). The stillborn Draft Sixth Plan (1978-83) of the Janata Government introduced another additional criterion, namely, the Income

Adjusted Total Population (IATP). A State's IATP was measured by the State's population weighted by the inverse of a 3-year average of the per capita State Domestic Product (SDP). The share of a State in the portion of Central Assistance distributable in accordance with this criterion was to be determined by its IATP as a percentage of the aggregate of all State's IATP.

9.81 In August, 1980 the National Development Council modified the original Gadgil formula to the extent of abolishing the 10% of the total Central Assistance allocable on the basis of continuing irrigation and power projects and instead raised the percentage allocable to States having per capita SDP below the national level from 10 to 20. The Seventh Plan has given up IATP as an allocation criterion. Other criteria remain unchanged. The criteria for distribution of Central Assistance among the States adopted under different Five-Year Plan together with the relative weight given to them has been summarized in Table 9.12.

NOTE :—Figures in parenthesis give the relative weightage to different objective criteria in the Formula.

* After adjustment of Rs. 149 crores of advance Plan Assistance given for relief works, the net Central Assistance has been determined as Rs. 29,737 crores.

Evaluation of the Seventh Plan Criteria for Distribution of Central Assistance :

9.82 An evaluation of the criteria for distribution of Central Assistance among the States is greatly handicapped by the fact that the Five-Year and Annual Plan documents have stopped giving the Statewise allocation of Central Assistance resulting from the application of these criteria. This is not just an inadvertent omission. It is a deliberate attempt to withhold vital information lest public knowledge of inequitous distribution of Central Assistance might provoke widespread criticism and protests. Some of the related facts that have been made public to suggest that several of the criteria are fairly ill-conceived and unreasonable in several respects. The shortcomings of the various criteria are brought out below.

Special Category Status:

9.83 Under the Gadgil Formula characterisation as a Special Category State is very rewarding indeed. Out of the total Central Assistance of Rs. 23,627 crores distributed in the Seventh Plan under the Gadgil Formula, Rs. 7,102 crores, i.e. 30%, have been allocated to the Special Categories States (Assam, H.P., J. & K. Manipur, Meghalaya, Nagaland, Sikkim and Tripura). This works out to 23.9% of the total Central Assistance allocated under the Gadgil Formula and other criteria. It may be mentioned that the 8 States accounted for a mere 5% of the total 1970 population of all the 22 States. Except or the tiny Sikkim, they are not very poor States either. In 1979-80 the last year of which the estimates of net State Domestic Product are available for all the States, the 8 States accounted for 4.8% of the total net State Domestic

Product of all the States. Thus, as a group, their per capita net SDP closely approached the average for all the States. The Total Plan outlay of the Special Category States has been set at Rs. 6,490 crores, i.e. less than their total Central Assistance by Rs. 612 crores. Since H.P. usually has substantial own resources for the State Plan and Assam and Meghalaya are also likely to make some positive contribution, even if small, to financing their Plans the excess of Central Assistance over the State Plan outlays is very probably accounted for by the other five States. In other words, Central Assistance to these five States would finance not only their entire State Plan outlay of Rs. 2,900 crores but also around Rs. 600 crores of gap in Non-Plan resources. In the case of other 3 States also the bulk and in some cases possibly almost the entire State Plan, would be financed by Central Assistance. To be classified as a Special Category State is indeed a very profitable proposition.

9.84 It would be logical to expect that such a financially rewarding status would be conferred on the basis of well defined stringent criteria. But no such criteria have been laid in the Plan Document. Nor can these be inferred from the actual classification of States as Special Category States. Location on active or a potentially active border does not seem to be the criterion. If this were so, this category should have also included Gujarat, Punjab and Rajasthan. Low per capita income is obviously not the criterion for several States in this category have higher per capita. SDP Plan than several other States which have been excluded. The Planning Commission presumably took the 3-year (1976-79) average per capita net State Domestic Product at current Prices of different States as worked out by the Finance Commission* as the basis of its exercises for the distribution of Central Assistance for State Plans. These estimates show that H.P. has a higher per capita SDP (Rs. 1,230) than the all-States' average (Rs. 1,139) and that J. &K. (Rs. 1,100) quite approaches the all-States' average. Both the States have been included in the Special Category while Bihar (Rs. 755), U.P.(Rs. 870), Madhya Pradesh (Rs. 895), Orissa (Rs. 918), Andhra Pradesh (Rs. 1,006) and Rajasthan (Rs. 1,127) whose per capita SDP is well below the all-States' average have been excluded. If the criterion is hilly terrain the States now classified as Special Category States could instead have been allowed due extra Central Assistance under the Hill Areas Programme (which is included under the Special Areas Programmes) and, to the extent necessary, a much larger than the present amount could have been earmarked for this purpose outside the Gadgil Formula. This would have obviated the need to set some States having hill areas apart from the rest of such States. If actual or threatened political trouble is the criterion, how is H.P. included while Punjab is excluded ? Moreover, it will be short-sighted and inexpedient or even immoral to submit to unjustified political pressure and is likely to encourage similar developments elsewhere.

9.85 The liberal treatment meted out to Special Category States sharpens, instead of satisfying, their appetite for Central Assistance. As a result of the total Central Assistance for State Plans allocated under all criteria, the share of Special Category States works out as follows : the Fourth Plan, 15.0% the Sixth Plan, 21.1% and the Seventh Plan, 23.9%. In the Seventh Plan of J. & K., with a population only one-eleventh of the combined population of Karnataka, Punjab and Haryana (1981 census) is reported to have been allocated over 20% larger Central Assistance than the latter 3 States taken together. Again, Himachal Pradesh, with a population only about one-seventh of the combined population of Punjab and Haryana is reported to have secured over 10% more Central Assistance than the latter two States taken together. In view of these and other such facts irrationality of the existing criteria should be obvious. There is clearly a need for a different approach to ensuring a preferential treatment in the matter of distribution of Central Assistance for particularly deserving States.

Per Capita SDP Criterion :

9.86 The per capita SDP (State Domestic Product) criterion as implemented at present is quite arbitrary. Under this criterion 20% of the Gadgil Formula Central Assistance is allocated to States which have per Capita SDP below the national average. The allocation among the State is made on the basis of population weighted by the deviation of the average per capita SDP of the particular State from twice the average per capita SDP of all the eligible States.

9.87 A major objection to the criterion as now applied is that the deviation is measured, not from the national or the all-States' average per capita SDP, but from a very arbitrary amount, namely, twice the eligible States' average. Why not measure it from 3 times, or 4 times the eligible States' average ? There is no rational way to decide why one and not the other multiple might be adopted ? Each multiple will give a different allocation. If instead of 2 times the eligible States' average, the deviation is measured from 3 times this average, the *inter-se* allocation will be different as shown in Table 9.13.

9.88 A comparison of Variant A and Variant B of Table 9.13 shows that when the deviation is measured from 3 times the eligible States' average per capita SDP instead of twice this average. Andhra Pradesh, Kerala and Rajasthan will get much more, while Bihar and U.P. will secure much less, Central Assistance under the per capita SDP criterion. There will be a marginal decline in the case of Madhya Pradesh and practically no change in the case of Orissa. Indeed any multiple from 1.3 upwards can be chosen for measuring the deviation, as it will give a positive deviation for all the States. The nearer is the chosen multiple to 1.3, the larger will be the share of the relatively lower income States. Thus under the present computation procedure, the *inter-se*-distribution of Central Assistance under the per capita SDP criterion is largely a matter of arbitrary choice of the multiple for measuring the deviation from the all eligible States' average.

9.89 The choice of the eligible States' average per capita SDP as the reference point for measuring the deviation indeed gives absurd results. Tamil Nadu is reported to have claimed that, on the basis of CSO's figures adopted by the Finance and the Planning Commissions, its average per capita SDP for the

*Report of the Eighth Finance Commission 1984, App. VI, Page, 158.

3-year period 1976-77 to 1978-79 works out to Rs. 1,164.67 which is below the national average of Rs. 1,165. Clearly, the State asserts, Tamil Nadu is eligible for a share in Central Assistance under the per capita SDP criterion but it has been deprived of this share by rounding of its per capita SDP to Rs. 1,165. If Tamil Nadu's *prima facie* reasonable plea had been accepted and unrounded figures of individual State's per capita SDP for 1976-79 has been used, as shown in Table 9.14 its share under the per capita SDP criterion would have been Rs. 315.82 crores, that is, 92.3% larger than Kerala's share which has lose lower per capita SDP by Rs. 3 only.

9.90 The rounding up of Tamil Nadu's per capita SDP by a mere one-third of a rupee had deprived the State of Rs. 315.82 crores of Central Assistance. What could be more arbitrary and absurd ?

9.91 Another facet of the extreme arbitrariness of the present interpretation of the per capita SDP criterion is that if, instead of taking the 3-year average for 1976-77 to 1978-79,. the average for the period 1978-79 to 1980-81 had been taken (as the State's per capita SDP data for 1979-80 and 1980-81 had become available before the Seventh Plan had been finalised). Kerala would have been excluded from the category of eligible States while Tamil Nadu would have figured in it. Thus a mere change of the reference period would have made a difference of a few hundred crores of rupees to both these States' entitlement to Central Assistance.

TABLE 9.13

Computation of Central Assistance for State Plans under the Per Capita SDP Criterion for the Seventh Plan Period

Eligible State	Population 1971 (million)	Per Capita SDP (1976—79 AV. Rs.)	Deviation (Rs.)	Col. 1 x Col. 3 (million)	Per Cent	Central Assistance (Rs. Crore)
0	1	2	3	4	5	6
Variant A						
1. Andhra Pradesh	43.503	1,006	9,88	39,935.75	13.282	438.97
2. Bihar	56.353	755	1,169	65,876.66	21.910	724.13
3. Kerala	21.347	1,162	762	76,266.41	5.410	178.10
4. Madhya Pradesh	41.654	895	1,029	42,861.97	14.256	471.16
5. Orissa	21.945	918	1,006	22,076.67	7,343	242.69
6. Rajasthan	25.766	1,127	797	20,535.50	6,830	225.73
7. Uttar Pradesh	88.341	870	1,054	93,111.41	30.969	1,023.52
Total				3,00,664.37	1,00,000	3,305.00
Variant B						
1. Andhra Pradesh	43.503	1,006	1,880	81,785.64	13.904	459.53
2. Bihar	56.353	755	2,131	1,20,088.24	20.416	674.75
3. Kerala	21.347	1,162	1,724	36,802.23	6,257	206.79
4. Madhya Pradesh	41.654	895	1,991	82,933.11	14.099	465.97
5. Orissa	21.945	918	1,968	43,187.76	7.342	242.65
6. Rajasthan	25.776	1,127	1,759	45,322.39	7.705	254.65
7. Uttar Pradesh	88.341	870	2,016	1,78,095.46	30.277	1,000.66
Total				5,88,214.83	1,100.000	3,305.00

Variant A : Deviation of per capita SDP is measured from 2 times the eligible States' average per capita SDP.

Variant B : Deviation of per capita SDP is measured from 3 times the eligilbe States' average per capita SDP.

TABLE 9.14

Computation of Central Assistance for State Plans under the per Capita SDP Criterion for the Seventh Plan Period Using Unrounded Figures of per Capita SDP

(Variant A)

Eligible State	Population 1971 (million)	Per Capita SDP (1976-79 AV. Rs.)	Deviation (Rs.)	Col. 1 x Col. 3 (million)	Per Cent	Central Assistance (Rs. crore)
0	1	2	3	4	5	6
1. Andhra Pradesh	43.503	1,005.67	968.75	42,143.53	12.072	398.98
2. Bihar	56.353	755.33	1,219.09	68,699.38	19.678	650.36
3. Kerala	21.347	1,161.67	812.75	17,349.77	4.970	164.26
4. Madhya Pradesh	41.654	896.00	1,079.42	44,692.16	12.879	425.65
5. Orissa	21.945	918.33	1,056.09	23,175.90	6.638	219.39
6. Rajasthan	25.766	1,127.33	847.09	21,826.12	6.252	206.63
7. Uttar Pradesh	88.341	869.66	104.76	97,595.60	27.955	923.91
8. Tamil Nadu	41.199	1,164.67	809.75	33,360.89	9.556	315.82
Total				3,49,113.35	1,100.000	3,305.00

9.92 It was probably decided to measure the deviation of individual States' per capita SDP, not from the eligible States' average per capita SDP, but from twice the latter amount because the adoption of the former amount as the reference point for measuring deviation would have resulted in some States showing a negative deviation. This would imply that such States would have a negative allocation, that is, would have to contribute to the amount divisible under this criterion rather that receiving a share from it. Clearly, on the basis of all eligible States' average per capita SDP as the reference point for measuring deviation, the computation procedure would have given absurd results. It looks that in order to secure a positive deviation for all the states, it was decided to use twice the eligible state's average per capita SDP as the reference point.

9.93 The most rational course would be to adopt all States' average per capita SDP as the reference point for determining the eligibility of States for a share in Central Assistance under this criterion as well as for measuring the deviation. The Union Territories have nothing to do with Central Assistance for State Plans. The relevant reference point for exercises in connection with Central Assistance is the per capita SDP of all States, and not of the entire country. If such a reference point is adopted, all eligible States, by definition, will show a positive deviation and the computation of their respective shares will present no difficulties. This is shown in Table 9.15.

TABLE 9.15

Computation of Central Assistance for State Plans under the Per Capita SDP Criterion for the Seventh Plan Period

Eligible State	Population 1971 (million)	Per Capita SDP (1976—79 Rs.)	Deviation (Rs.)	Col. 1 × Col. 3 (million)	Per Cent	Central Assistance (Rs. crore)
0	1	2	3	4	5	6
		Variant C1				
1. Andhra Pradesh	43.503	1,006	133	5,785.90	8,699	287.50

6. Uttar Pradesh	88.341	869.67	269.33	23,792.88	35.760	1,181.87
7. Tamil Nadu;	41.199	1,138.67*	0.33	13.60	0.020	0.66
Total				66,534.56	1,100.000	3,305.00

*Assumed for the purpose of this variant so as to make Tamil Nadu eligible for a share under this criteria.

9.94 It may be seen from Table 9.15 by comparing variant C1 with the variant C2 that when deviation is measured from the all State's average per capita SDP, the use of unrounded data instead of rounded data makes a very marginal difference to inter-State distribution of Central Assistance. The irrationality in the presently used reference point is thus removed. Further more, the absurdities of the sort noticed above in the case of Tamil Nadu will not arise.

9.95 Table 9.15 also shows that under a rational version of the per capita SDP criterion like the one adopted in that Table, only 6 non-special category States will share the Central Assistance allocable under this criterion. Of this as much as 83.5% will go to the heart-land States of U.P., Bihar and Madhya Pradesh. This criterion thus primarily serves the interest of these States. Under this criterion alone the three States receive 16.7 (20×835)% of the total Central Assistance allocated under the Gadgil Formula criteria. These three States are also the highest beneficiary under the population criteria as they account for 36.3% of the total population of the non-special Category States. Under the population criteria the three States receive another 21.7 (60×·362)% of the Central Assistance distributed under the Gadgil formula. Thus under these two criteria alone the share of the three States adds up to 38.4% of the Gadgil Formula total.

Tax Effort Criterion

9.96 Of the Central Assistance allocated under the modified Gadgil Formula, 10% is distributed on the basis of the tax effort of the States. The tax effort of the State is measured by the ratio of its Per capita tax receipts to its per capita SDP, expressed as a percentage. The tax effort percentages of different States are then added up. The share of a state in the allocable amount is the ratio of its tax effort percentage to the total of tax effort percentages of all States.

9.97 There is a persistent demand on the part of the States with a low level of tax effort, who correspondingly get a relatively smaller share of the amount allocable under this criterion that this criterion be altogether abolished and the amount now allocated under this criterion should also be added to that allocated under the Per Capita SDP criterion. The tax effort criterion is the only one in the modified Gadgil Formula that rewards the States for their effort at resource mobilisation. The amount allocated under this criterion is not more than 10% of the total distributed under this Formula. The interests of relatively lower income States have been safeguarded, not only by other criteria, but even under this criterion by measuring the tax effort of a State, not by the absolute amount of its per capita tax revenue, but by the ratio of its per capita tax revenue to its per capita SDP. The lower is the per capita SDP of a State, the correspondingly lower is the absolute amount of per capita tax revenue which gives it the same tax ratio that a relatively higher income State can secure only with a correspondingly higher per capita tax revenue.

9.98 It is sometimes said that is much easier for a relatively higher income State to achieve a given tax ratio than it is for a relatively lower income that State to do this. The same postulate was at one time put forth with respect to the rate of saving of countries. But this postulate has been conclusively invalidated by the experience of the group of Asian countries classified by the World Bank as "low income Asia." Since 1980, the low income Asia has been showing a *higher* rate of saving than that observed in the *case* of "industrial market economics" which are the most developed and the highest income group in the world. The rate of saving of the two groups of countries, as percent of GDP, has been as follows : 1981, 23.7% as against 21.6%; 1982, 22.1% as against 19.9%; 1983 (estimated), 24.0% as against 20%. *The Indian experience shows that the direct relationship between the tax ratio and the per capita SDP is very weak. The latest available data are presented in Table 9.16.

9.99 Table 9.16 shows that in 1983-84 among the the non-special category States, the first three positions in terms of tax ratio were occupied by States who held the 9th, the 6th and the 10th position in terms of per capita SDP, respectively. Among the special category State Himachal Pradesh which ranks number 1 in terms of per capita SDP, is only number 3 with regard to the tax ratio. If all States are taken together Himachal Pradesh will be number 6 from the top in terms of per capita SDP but only number 15 in the tax ratio ranking. West Bengal which is number 5 in per capita SDP is only number 12 in tax ratio ranking. If all States were taken together, West Bengal will still rank number 5 in per capita SDP but will be as low as number 14 with regard to tax ratio. Haryana and Punjab which occupy the first two positions with respect to per capita SDP rank only number 7 and 8, respectively, in terms of tax ratio. Sikkim which has the highest tax ratio among the special category States has the lowest per capita SDP. The correlation coefficient between the per capita SDP of States and their tax ratio is no doubt positive, but it is very week, a mere 296. It is not significant even at 20% level.

*World Bank, World Development Report 1985, Table A-7, P. 1951.

This shows that relatively low per capita SDP is no insuperable barrier to a State achieving a fairly high tax ratio. As shown in Table 9.14, several States with a fairly modest per capita SDP do rank among those with the highest tax ratio.

TABLE 9.16

Tax Ratio of States, 1983-84

SOURCE :—1. For per capita SDP—Govt. of India, Ministry of Finance. Indian Economic Statistics-Public Finance Dec., 1985, Table 11.3, P. 102.

2. For revenue from State-taxes RBI, Bulletin Nov. 1985, P-P. 835-836 @ Implied in CSO's estimates of per capita SDP for that year.

9.100 It looks that the availability of soft options for financing public expenditure is the most important factor, though by no means the only one, determining the State's propensity to impose and collect taxes. The heartland States and the special category States, who because of their political clout or the special status have plenty of soft options in this matter, generally tend to have low tax ratios, while the Southern States who enjoy no comparable advantages have to have high tax ratios. It looks that no alibi of low tax ratio States, such as relatively low per capita SDP in the case of some of these States, is valid enough to justify abandonment of this criterion.

Special Problems Criterion

9.101 The 10% of Central Assistance allocable under the Gadgil formula on the basis of special problems is, in fact, at the discretion of the Planning

Commission. This is too big an amount to be placed at the unfettered discretion of the Planning Commission. This is not even in the interest of the Commission. No matter how judiciously the Planning Commission exercise their discretion, it will always expose them to the charge of discrimination on political or other grounds. For instance, it will be hard to convince Punjab and Haryana of the rationale of inter-State distribution of Central Assistance under this criterion when they reportedly do not get a paisa under it while some other States have been reportedly allocated huge amounts. Do not these two States have no special problems ? Punjab is, in fact, beset with enormous financial problems. The present financial situation may well continue over the greater part of the Eighth Plan period. And yet it gets nothing under this criterion in the Seventh Plan period. It is very necessary that the special problems must be identified and their respective allocation determined in the Plan document itself. The Plan must also lay down the criteria for the inter-State distribution of the amount allocated to each special problem. Preferably, if time permits, the Plan should even determine the actual amount allocated to each State for each special problem. A reasonable proportion, say 10% of the amount allocated to special problems may, however, be left to be distributed among the sepcial problems and the States by the national planning organisation, at its discretion, over the period of the Plan in the light of the emerging situation in various States.

Central Assistance outside the Gadgil Formula

9.102 Central Assistance is made available, outside the Gadgil formula, for (i) externally aided projects and (ii) the special area programme. Under item (i) the States receive extra Central Assistance equivalent to 70% of the aid disbursements. The balance 30% of the aid amount is retained by the Centre. There need be no change in the percentage of aid made available to the States as extra Central Assistance. The percentage is already high enough. Nor is there any justification for making available this part of the Central Assistance to States at the concessional rates at which it might have been secured by the Central Government. This would introduce an invidious distinction between aid amounts made available under different criteria. The fact that the States get a substantial amount of extra Central Assistance on this account for securing and expeditiously implementing the externally-aided project should be an adequate incentive for them.

9.103 The amount available for special area programmes is largely for four programmes, namely, the North East Council Schemes, the Hill Areas Programmes, the Tribal Areas Programmes and the Border Areas Development Programmes. These programmes are in fact very much of the nature of Centrally Sponsored Schemes and should be treated as such. The Central Assistance for these programmes really does not form part of the Central Assistance for State Plans. The Annual Plan 1985-86 document in fact correctly shows Central Assistance for Area Programmes separately from and outside of the "Total Central Assistance for State Plans".

9.104 The above discussion shows that the Central Assistance for State Plans is at present subject to serious irrationalities with respect to its concepts and criteria. It is very necessary to rationalise this form of Centre-State resources transfer.

(6) Growing Political Subordination of the States to the Centre.

9.105 In a genuine federal state structure, the constituent units are autonomous within their constitutional jurisdiction. This is, however, not true of the Indian States. Their heavy financial dependence on the Centre, together with the serious constitutional limitations on their legislative and executive authority, even with regard to matters which are within their jurisdiction under the Constitution, has subordinated them to the Centre to a degree which is obviously inconsistent with the federal concept. This subordination is getting worse day by day. A good proportion of the time of the State Chief Ministers and other important Ministers, as well as of key State officials, is spent on making trips to Delhi at heavy cost to the State exchequer. A further substantial proportion of their time and attention is taken up attending to the visiting Union Ministers and officials, answering their queries, or offering explanations to the Centre on one matter or the other. All this stands in the way of their giving due attention to State Affairs and the State Government work suffers.

9.106 The havoc that political subordination of the States to the Centre has played with the autonomy, prestige and self-respect of State Governments is brought out by a recent very painful but highly instructive episode. A major State in its replies to the Sarkaria Commission is reported to have vehemently objected to Article 249 of the Constitution and demanded that it be omitted. Even before the Sarkaria Commission had given its reaction to this demand, the State staged a volte-face on this matter. During the 1986 monsoon session of Parliament when the ruling party at the Centre moved a resolution in the Council of States to authorise the Parliament, with reference to Article 249, to enact legislation on, *inter-alia*, two major subjects in the State List, namely, Public Order and Police, the M.Ps. belonging to the ruling party in the State not only did not protest against the resolution but actually supported it. The fault for this volte-face lies not so much with the ruling party in that State as with the present state of Centre-State relations. State's financial dependence on the Centre is a major factor for this degree of their subordination to the latter.

Towards balanced Centre-State Financial relations*

10.1 Cooperative federalism and a congenial environment for efficient resource use require an even financial balance between the Centre and the States. Such a balance may be said to exist when the following conditions are met :

(1) The distribution of financial resources between the Centre and the States may broadly correspond to the expenditure implications of the division of responsibility between them under the Constitution.

(2) The need for purely discretionary resource transfers from the Centre to the States may be reduced to the Minimum so that the Central ministries may have few opportunities to

influence States development policies and programmes in the latters sphere of Constitutional responsibility by exerting financial pressure.

(3) The scale and terms of Centre-State resources transfer, whether discretionary or non-discretionary, may be such as do not inevitably push the States into a debt-trap.

(4) The Centre and the States may have adequate incentives for mobilisation of resources in their respective spheres and using them efficiently.

(5) Reasonable opportunities may be available to the relatively lower income States and regions to financially reinforce their own resources and efforts towards overcoming their backwardness.

(6) States afflicted by natural calamities or burdened by exceptional impediments to development may receive such extra financial support as is necessary for making their own remedial efforts effective enough.

10.2 The measures suggested below are aimed at creating a system of Centre-State financial relations which does reasonably come up to the notion of a balanced system put forth above.

(1) Widening the States' Tax Base

10.3 It has been shown in Chapter 8 that the fact that at present the tax revenue from State taxes is only 35.4% of total tax revenue of the Centre and the States is attributable to the States' narrow tax base and not so much to the alleged relative inelasticity of taxes in their jurisdiction. Since the Constitutional responsibilities of the States require them to incur expenditure comparable to that implicit in the Centres' responsibilities, their much smaller tax revenue creates a serious financial imbalance between the Centre and the States. This imbalance must be tackled to the extent possible at its roots, that is, by widening the States' tax base by transferring some taxes from the Centre to the States.

Additional Sales Tax in lieu of Union Excise Duties on selected Products :

10.4 Among the taxes which the Centre is empowered to levy and collect, the most important are : The Customs Duties, the Income Tax (on personal incomes), the Corporation Tax (that is, the income tax on corporate incomes) and the Union Excise Duties. Accordingly to the Central Budget Estimates for 1986-87, the four taxes between them will yield 97·8% of the estimated gross tax revenue of the Centre. By the very nature of the Custom Duties, the Income Tax and the Corporation Tax, these must continue to be levied and collected by the Centre. The only tax which it may be feasible to transfer to the States wholly or partially is the Union Excise Duties. But it will be extremely unjust and ill-advised to transfer the power to levy this tax is as such to the States. The Union Excise Duties are levied, as a rule, on industrial products. In their case, the demand is generally less elastic than supply, particularly in the long run. The burden of Union Excise Duties therefore falls wholly or largely on the final consumer by way of higher prices payable for the taxed commodities, and not on the producer. If a State were to levy this tax, it will be taxing its own people only to the extent of their share in the total consumption. To the extent that the people of other States are the Consumer, this state will be taxing the population of other States. It is manifestly unjust to empower a State to tax, for the most part, the people of other States. Furthermore, since industrial development has been very uneven among the different States, the transfer of Union Excise Duties as such would imply that the industrially advanced States, which generally also have a higher per capita S. D. P., will be taxing the people of other States for the benefit of their own people. This is doubly unjust as it will further accentuate inter-State inequalities.

10.5 What can be done, and ought to be done, is that the income to be derived from Union Excise Duties on selected products may be transferred to the States in such a way as to make it possible for them to tax, in each case, their own people. This can be done if the Centre abolishes the excise duty on these products so that the States may levy an equivalent additional sales tax on these (in lieu of the excise duty). In this case there ought to be no increase in price. Each State will then be taking its own consuming population and there will be no additional burden even on them as the additional tax will be in lieu of the withdrawn Union Excise Duties. In order to ward off any pressure on the individual States to reduce the basic additional sales tax in lieu of Excise Duties, all States may agree that they will follow a common all-India policy in the matter under the aegis of the Inter-State Council or the National Development Council.

10.6 This arrangement may preferably cover such industrial products the sales tax on which cannot be easily evaded. The cost suitable from this point of view are the products the retail sales of which are easy to control and record so that it should be possible to collect the additional sales tax efficiently without much risk of evasion. This condition is largely met in the case of the following products : petroleum products (Tariff items no. 6 to 11AA), tyres (T. item 16), processed vegetable oils (included in T. item 12), vanspati (item 13), cement (item 23), iron and steel and products thereof (item 26A), sheet glass (part of item 23A), TV sets (item 23A), and motor vehicles and tractors (item 34). According to the Revised Estimates for 1985-86, the expected revenue yield from Basic and Special Excise Duties on these items was Rs. 4387.56 crores. The Budget Estimates for 1986-87, put the corresponding yield as Rs. 4,890.24 crores. Details are given in table 10.1

TABLE 10.1

Estimated Revenue Yield from Basic and Special Excise Duties on Selected Products

(Rs. crores)

	1985-86 (R.E.)	@ 1986-87 (B.E.)

8. TV sets	100.00**	168.00**
9. Motor Vehicles and tractors	439.62	518.51
I. Total revenue from selected items	4,387.56	4,890.24
II. Total revenue from all excisable items (gross of refunds and drawbacks)	10,761.69	11,868.52
III. (I) as % of (II)	40.8	41.2

* Glassware is not considered a suitable item to be covered under this arrangement.

With regard to glass the arrangement may cover only sheet glass.

@ Includes the estimated revenue from additional tax proposals in the Budget.

** Estimated.

10.7 The above 9 items (even when allowance is made for the fact that glassware is to be excluded from the proposed arrangement) account for over 40% of the total revenue yield from Basic and Special Excise Duties. Substitution on additional Sales tax for the existing basic excise duties would mean a very substantial widening of the State's tax bases. The revenue from State taxes in 1985-86 (B.E.) was estimated at Rs. 14,405 crores. An arrangement which in that year would have substituted over Rs. 4,300 crores of Union revenue from Excise Duties by an equivalent amount of State's revenue from the additional sales tax levied in lieu of the excise duties on selected items would have widened the State's tax base by abount one-third. This arrangement will be a major step towards balanced Centre-State Financial relations. And it is workable arrangement. In the case of all the selected item it should be possible to have a limited number of retail outlets licenced and controlled by the respective State Governments. Even today the number of retail points in their case is generally fairly limited. Administration of the additional sales tax in lieu of the excise duties should not therefore pose tricky problems.

Reimposition of Sales Tax on Sugar, Textiles and Tobacco :

10.8 If it is considered necessary to introduce an additional sales tax in lieu of Union excise duties on selected items, there will be little justification for retaining the additional duties of excise in lieu of the sales tax on sugar, textiles and tobacco imposed with effect from 1957-58. These Duties have been estimated to yield Rs. 1,047·36 crores in 1986-87 (including additional taxation proposed in the Budget). The old arrangement may be restored. Many States claim that under the existing arrangement they have received much less revenue than what they would have got if the old arrangement had been continued. For instance, the Punjab Department of Finance has calculated that if the additional duties of excise in lieu of Sales tax had not been introduced, on the very plausible assumption that the rate of growth of revenue from sales tax on sugar, textiles and tobacco would have been at least not lower than that actually shown by the total sales tax on other items, over the period 1957-58 to 1983-84, the State would have got more than double the amount that it actually got as its share in the revenue from the additional duties of excise, that is, Rs. 320 crores as against the actual receipts of Rs. 157 crores. The abolition of this arrangement and reimposition of sales tax on sugar, textiles and to bacco will remove any felt grievance with regard to the operation of the existing arrangement.

Fuller Exploitation of the Revenue Potential of the Taxes Listed under Article 269 *:*

10.9 There should be a fuller exploitation of the revenue potential of taxes listed under Article 269. Specific suggestions in this respect are given below.

10.10 Tax on railway fares should be reimposed, initially at the rate of 15%. This tax rate will still be much lower than the prevalent tax rates on bus fares. Moreover, the tax on bus fares is on top of other heavy taxes on road transport which include the excise duty and sales tax on diesel, vehicles, tyres and spare parts, and the tax burden under Motor Vehicles Taxes. There are no comparable tax burdens on railway transport.

10.11 Pending the reimposition of a tax on railway fares, the Grant to States in lieu of tax on railway passenger fares may be maintained at 10·7% of the non-suburban passenger earnings. But the amount of the Grant may be determined each year on the basis of these earnings in that year and not fixed for a 5 year period as done by the Eighth Finance Commission. The amount of grant may be determined initially on the basis of the projection of non-suburban passenger earnings as adopted in the Railway Budget estimates for the year. Necessary adjustments in the grant amount may be made subsequently when the data on actual earnings during that year are available.

10.12 An adequate terminal tax on passenger arrivals by air may be imposed.

10.13 A tax on advertisements should be imposed and the scope of Article 269(1)(f) may be widened to include, besides newspaper advertisements, advertisements broadcast by radio or telecast by television.

10.14 Article 276(2) may be amended to raise the ceiling on tax on professions, trades, callings and employments to Rs. 1,000 per annum from the present level of Rs. 250. Several States may be included to brave the odium of imposing this tax if it could

yield a substantial amount. The general price level has risen several times since this ceiling was fixed. Raising the ceiling to Rs. 1,000 will mean only its partial adjustment to prevent general price level.

10.15 The power of Parliament by law to impose restrictions under Article 286(3) on taxes on sale or purchase of goods declared by Parliament by law to be of special importance in inter-State trade or commerce of or delivery of goods on hire purchase or any other system of payment by instalments or the transfer of the right to use any goods for any purpose and for any period for a valuable consideration must be used sparingly and judiciously. The State which export a large proportion of their output to other States must not be penalised for this by an indiscriminate use of power to impose restrictions on sales tax levied by exporting States. The burden of such restrictions will be particularly heavy on small States which necessarily have to export a large part of their output to other States just as the small countries have to do this in international trade. Again, now that leasing, particularly of machinery and sale on instalment credit, particularly in the case of consumer durables, is rapidly growing, restriction on sales tax under Article 286(3) must not be allowed to develop into a means of large scale avoidance of sales tax.

(2) Enlarging the State's Share in Central Taxes.

10.16 There must be no indiscriminate enlargement of the Divisible Pool of Central taxes. It is as necessary for the Centre to have adequate tax resources for proper discharge of its Constitutional responsibilities as it is for the States to have access to financial resources commensurate with their constitutional responsibilities. It would therefore be inadvisable to support the extreme ideas sometimes put forth for enlargement of the State's share in Central taxes. In this section an attempt has been made to outline a responsible approach to this subject which keeps in view the overall national interest.

10.17 Customs Duties may remain outside the Divisible Pool. These alone should provide the Centre with substantially larger revenue than the amount normally needed to finance a reasonable level of Defence expenditure. The Central Budget for 1986-87 has estimated the net customs revenue at Rs. 10,407 crores (including additional tax measures proposed in the Budget) whereas Defence expenditure (including defence capital outlay) has been budgeted at Rs. 8,728 crores. This leaves a margin of Rs. 1,679 crores for financing the Centre's non-defence requirements.

10.18 Having taken care of the Centre's foremost Constitutional responsibility, it should be in order to suggest that 50% of the revenue from Centre's principal taxes, namely, the Income Tax, the Corporation Tax and the Union Excise Duties may go to the State's as their share in Central Taxes. The Corporation Tax being but a tax on corporate incomes it is conceptually very much a part of the income tax. It should be once again treated as one, if need be, a Constitutional amendment and included in the Divisible Pool of Central taxes. At present, the State's share in Income Tax has been set at 85%. A 50% share in the combined Income and Corporation Tax should not be too onerous on the Centre. The Union Excise Duties are already divisible. The increase in the State's share from 45% under the Eighth Finance Commission recommendations to the proposed 50% is but a rather small adjustment. No tax which is essentially of the nature of an excise duty may be kept out of the Divisible Pool merely by classifying it as an earmarked cess. The present cesses on indigenously produced crude oil, sugar, coal and coke and TV sets, which are expected to yield in 1986-87 Rs. 910·80 crores, Rs. 95·20 crores, Rs. 67·30 crores and Rs. 280.00 crores are clearly excise duties the revenue yield of which ought to form a part of the Divisible Pool. To prevent misuse of the earmarked cesses on commodities to the detriment of the States, it may be provided that the yield of a cess in excess of Rs. 10 crores shall be included in the Divisible Pool.

10.19 On the above basis, the Divisible Pool in 1986-87 may be estimated at Rs. 13,832 crores comprising : Income Tax, Rs. 2,588 crores; Corporation Tax, Rs. 3,133 crores and Divisible Union Excise Duties, Rs. 8,111 crores.* At 50% the State's share in Divisible Pool will work out to Rs. 6,916 crores.

* The Estimate of Divisible Excise Duties had been worked out as under :—

	(Rs. crore)
1. Total estimated Union Excise Duties	14,142
2. *Less* :	
(i) Union Excise Duties proposed to be transferred to State as additional sales tax in lieu of Union Excise Duty .	(—)4,890
(ii) Effect of reimposition of sales tax in place of the Additional Duties of Exise	(—)1,047
(iii) Earmarked cesses outside the Divisible Pool	(—)94
3. Contribution to Divisible Pool . .	8,111

(3) Net effect of proposal in Sections (1) and (2)

10.20 The various proposals made in Sections (1) and (2) above for transfer of tax revenues from the Centre to the State will add upto a total transfer in 1986-87 of Rs. 12,853 crores made up of the following :

	(Rs. crores
1. Effect of imposition of additional sales tax in lieu of Union Excise duties . .	4,890
2. Effect of reimposition of sales tax and abolition of the Additional Excise Duties .	1,047
3. State's share in Central Taxes . .	6,916
Total estimated transfer . . .	12,853

10.21 Under the existing arrangement, the State's share in Central Taxes in 1986-87 has been estimated at Rs. 8,260 crores.** The net effect of the proposals made in Sections (1) and (2) above would be an additional tax revenue transfer of Rs. 4,593 crores to the States. The Centre would then be left with a total tax revenue of Rs. 18,103 crores as against Rs. 22,696 under the recommendations of the Eighth Finance Commission.

**Central Budget Documents 1986-87.

(4) Inter-State Distribution of the Divisible Pool

10.22 Various criteria for distribution of the constituent units' share in federal tax revenues among these units are, in the final analysis, variants of two basic criteria, namely, the criterion of compensation and the criterion of redistribution. Under the criterion of compensation, each constituent unit receives a share in proportion to the contribution of its population to the gross federal tax revenue from divisible taxes. Under the criteria of redistribution, the units with lower per capita SDP than the national average receive more than proportionately and the units with higher per capita SDP than the national average receive less than proportionately to the contribution of their respective population to the gross federal revenue from divisible taxes so that there is in the process a net resources transfer from the higher income units to the lower income units of the Federation.

10.23 The extra tax revenue accruing to the States from the proposed imposition of additional sales tax in lieu of the Union Excise Duty, and the reimposition of sales tax on sugar, textiles and tobacco together with abolition of the Additional Duties of Excise on these items will obviously get distributed among the States on the compensation criterion. In fact, each State will be realising additional revenue from sales tax equivalent to the extra sales tax paid by the State's population. This will be a case of full compensation.

10.24 In order to have a balanced inter-State distribution of the total amount of tax revenue proposed to be transferred from the Centre to the States, the redistribution criterion may be applied to the distribution of States' share in the Divisible Pool of Central taxes. At the same time, it is necessary to encourage the States to greater fiscal efforts, particularly towards increasing their revenue from State Taxes by imposing new taxes and more efficient enforcement of the existing taxes. Finally, the States may be spurred on, and given financial incentive, for more vigorous efforts towards tackling some of the major national problems. Keeping in view the above considerations, the suggested criteria for distribution and their relative weights are given in Table 10·2.

TABLE 10.2

Suggested Criteria for Distribution of the States' Share in the Divisible Pool of Central Taxes

Criterion	Relative weights in the Inter-State Distribution(%)
1	2
1. Population	50.0
2. Per Capita SDP below the all-States' average	20.0
3. Tax effort	10.0
4. Selected special Problems	20.0
1. Development of Scheduled Castes . .	4.0
2. Development of Scheduled Tribes . .	2.5
3. Development of Hill/Remote Areas .	3.0
4. Development of Border Areas . .	2.5
5. Coordinated Development of the North-East	2.5
6. Housing for Landless Workers . .	3.0
7. Improvement of Urban Slums . .	2.5

Population :

10.25 Distribution according to population substantially incorporates the redistribution criterion. For instance, the burden of excise duties falls on the consumer of commodities the consumer price of which includes an element of these duties. The population of higher income States, because of their relatively larger consumption of such commodities, contribute to the tax revenue from their duties more than proportionately to their number. On the other hand, the population of lower income States, because of their relatively smaller per capita consumption of these commodities, contribute to excise revenue less than proportionately to their number. Distribution of the divisible portion of the Union excise revenue according to population of the States determines the shares of higher income States at less than proportionately, and that of lower income States at more proportionately, to their respective contribution to this revenue. This criterion is obviously redistributive in character.

10.26 The distribution of the divisible portion of the revenue from income tax on personal and corporate incomes according to the population of different States has an even more pronounced redistributive impact. The low income States get much more and higher income States get much less than their respective contribution to the revenue from this tax. *If the gross revenue from this tax is developed to its full potential so that its contribution to the* Divisible Pool significantly improves relatively to the contribution of Union Excise Duties, the redistributive effect of distribution according to population will become even stronger.

Per Capita SDP Below the all-States' Average :

10.27 Under this criterion, an eligible State's share in the total amount divisible in accordance with this criterion will depend upon (i) how far its per capita SDP lags behind the all-States' average and (ii) the size of its population. The entire benefit of distribution under this criterion will go to the lower income States. The lower is the per capita SDP of a State, the greater will be the weightage it will get on account of low income. The relatively higher income States which contribute to the Centre's revenue from divisible taxes more than proportionately to the size of their population will get just nothing under this criterion. Clearly, this criterion has a very strong redistributive impact.

Tax Effort :

10.28 Under this criterion the share of a State in the amount divisible under this criterion depends upon its tax ratio, that is, the ratio of its total or per capita tax revenue to its total or per capita SDP. If there were a strong and unalterable correlation between a State's per capita SDP and its tax ratio, this criterion would be essentially compensatory in

character, that is each State will be receiving its share more or less in proportion to the contribution of its people to the Centre's gross revenue from the divisible taxes. But, as seen in Chapter 9, the correlation between States' per capita SDP and their ratio is very weak and insignificant. This means that it is very much possible for a low income State to have a relatively high tax ratio, and for a high income State to have relatively low tax ratio. *Several instances of this were given in Chapter 9. It follows that it is surely possible, within a very wide range, for a low income State to raise its tax ratio to a high enough level if it exercises the necessary fiscal discipline and undertakes adequate resources mobilisation. Tamil Nadu ranks number nine from the top in terms of per capita SDP but ranks number one in terms of tax ratio.* On the other hand, Himachal Pradesh which ranks number 6 in terms of per capita SDP is as low as number 16 in terms of tax ratio. If the relatively low income States emulate T.N. and achieve a high enough tax ratio, even the tax effort criterion may have a substantial redistributive effect in that low income States, which contribute to revenue from divisible taxes generally less than proportionately to their population, might also be claiming a share comparable to that of the higher income States, which contribute to Central tax revenue generally more than proportionately to their population. It is necessary to retain this criterion to provide due incentive to States to improve their tax ratio. The real possibility that even under this criterion the low income States may claim a high enough share in the amount divisible under it makes the case of its retention all the stronger..

Special Problems :

10.29 It is suggested that the amount allocated under this criterion may be distributed among the concerned States with reference to the extent and gravity of the problem in each State. Thus need and not contribution to the divisible tax revenue is the determining factor of a State's share. The various problems listed under this criterion are all major national problems which demand serious attention of the affected States. In order to ensure that the States in receipt of allocation under this criterion actually spend the amount received with reference to a particular special problem on remedying it, this amount may be earmarked for the particular purpose. Any portion of this amount which remains unutilised for the purpose at the end of a year may be reallocated by the NDC (or its relevant Committee) to such other States as have made good progress in overcoming this problem.

10.30 The amount allocated for development of Scheduled Castes may be distributed among the States in proportion to their respective Scheduled Castes Population. The allocation for development of Scheduled Tribes may be distributed to the extent of 50% in accordance with the tribal population of each State and 50% with respect to the predominantly tribal areas in the different states. The justification for the second sub-criterion is that if the tribal population is dispersed over a much larger areas, its development becomes all the more difficult. Unlike the Scheduled Castes who are generally not predominant in any large area, the Scheduled Tribes do have areas where they constitute the predominant element of the population. The amount allocated to the hill and remote areas, and the border areas, may also be distributed 50% according to the extent of these areas and 50% according to their population in different States. The amount allocated for the coordinated development of the North East may be put at disposal of the North East Council for implementation of its development programmes. The allocation for improvement of urban slums and for housing for the landless may be distributed among the States in accordance with the population of these categories in different States.

10.31 Taking all the criteria together, the suggested distribution scheme will have a strong redistributive impact. It could be confidently expected to contributed to gradual evening out of inter-State disparities in the level of development.

Ensuring the States a Due Share in Capital Receipts :

10.32 The very unequal distribution of capital receipts between the Centre and the States has been brought out in Chapter 7. This puts the States at a serious handicap with regard to resources for financing their investment requirements for balanced development of the sectors of the economy which are within their Constitutional jurisdiction. For this purpose the States are obliged to depend heavily on the Centre. In this section measures for ensuring the States their due share in capital receipts have been put forth.

Equal Share in Market Borrowings :

10.33 Apart form the Reserve Bank, the principal subscribers to Market Borrowings are (i) the commercial banks, (ii) the non-Government Provident Funds and (iii) the Life Insurance Corporation. At the end of March 1984, the Central and State Government Securities (representing the outstanding Government market borrowings, on that date) were held by the various subscribers as follows : RBI, 25·3%; commercial banks, 41·1%; non-Government Provident Funds, 13%; LIC, 11%; and other 9.6%.* The RBI's holdings of (Central) Government securities are a component of the deficit financing undertaken by the Centre. Assessment of the Scope for market borrowings in a given year of five year period excludes RBI investment in Central Government securities and instead counts it under the projected deficit financing. Likely investment by the commercial banks is related to the estimated increase in their deposits and the prescribed statutory liquidity ratio. The investment by the non-Government Provident Funds and the LIC is related to the estimated increment in their investible resources and the likely investment pattern of this increment taking into account also any statutory obligations of these institutions. Out of the total estimated scope for market borrowing, a portion is first set aside for market borrowings by the financial institutions. In the Seventh Plan out of the estimated net market borrowings of Rs. 36108 crores over the 5-year period 1985-90, Rs. 5546 crores (15·4% of the total (have been set aside for the financial institutions. If the Central and State public enterprises are to be encouraged to tap the financial

*RBI, Report on Currency and Finance 1984-85, Vol. II, Statement 90, PP 120-121. The discrepancy between the total and the components has been adjusted under "others".

institutions rather than excessively depending on Government for funds (which policy reorientation is necessary to impose adequate financial discipline on these enterprises as well on Governments which own them), and if the requirements of the private sector for long term finance are to be met adequately, the share of financial institutions in market borrowings must be greatly raised, say, to 30%. The balance 70% of the anticipated borrowings may be shared equally by the Centre and the States, each getting 35% of the total. On this basis the States share in the Seventh Plan market borrowings would have work out to Rs. 12638 (35% of 36108) crores as against Rs. 9942 crores actually allocated to them, that is, Rs. 2696 crores more over a 5-year period. The share of the States will include any market borrowings allocated by the State Governments to S.E.Bs. and other State enterprises and bodies. The same should apply to the Centre, if it begins to allocate some market borrowings to the Central enterprises.

Allocation of market Borrowings Among the States:

10.34 There must be a principled allocation of market borrowings among the States on the basis of a combination of the compensation and the redistribution criteria. As at present the States' share may be divided into parts : the normal and the special. The distribution among the two parts may be in the ratio of 75:25 as against the Seventh Plan Ratio of 70·5:29.5 so that the States like Punjab which were treated very unfairly in the Seventh Plan in the allocation of market borrowing could be given a more reasonable allocation.

10.35 The normal portion of market borrowing may be distributed among all the States on the compensation criterion by relating each States' allocation to the estimated contribution of its population to market borrowing. This contribution may be measured as the sum of :

(i) accertain to commercial bank deposits in the State multiplied by the prescribed statutory liquidity ratio of banks;

(ii) accretion in the LIC's Life Fund attributable to the State multiplied by the ratio of LIC's incremental investment in market borrowing to its total incremental investment; and

(iii) increment in the investible reasources of non-Government Provident Funds attributable to the State multiplied by the ratio of PFs' incremental investment in market borrowing to their total incremental investment.

If not better way of estimating the individual State's contribution to the increase in LIC's investible resources is possible, the premium income of the LIC in the State may be taken as the indicator. Likewise the net increase in the subscriber's balances with the non-Government Provident Funds in the State may be taken as the indicator of its contribution to the accretion to P.F.'s investible resources. Any shortfall in a State's entitlement to bank credit compared to its entitlement on the basis of the accepted national norm for credit deposit ratio may be added to the State's contribution to market borrowing to compensate it for the shortfall in this ratio. By allocating normal market borrowings among the States in proportion to their estimate respective contribution to total market borrowings, a reasonably principled distribution may be secured.

10.36 The special portion of market borrowing may be allocated on the redistribution criterion only to States with a per capita SDP below the all State's average. The distribution among the eligible States may be in accordance with the shortfall in per capita SDP comparable to the all States, average multiplied by the State's population. The share of a State will depend upon the ratio which this product bears to the total corresponding product of all the eligible States. This allocation will be strongly on the redistribution criterion. The higher income States which generally contribute to market borrowings more than proportionately to their population will be simply denied any allocation from this portion of market borrowings.

Small Savings :

10.37 It was explained in Chapter 8 that since only the net collections of Small Savings are shareable with the States and that withdrawals are met out of gross collections, the States' repayments of Small Savings loans to the Centre are fully available to the latter for financing its capital outlays. In other words, these repayments represent a perverse resources transfer from the States to the Centre which further accentuates the imbalance between the two. To minimise this resources transfer and to increase the States' share in net collections, the following suggestions are made :

(1) A State with a per capita SDP higher than the all States' average may be given small Savings loans equal to four-fifth of the net collections of these. States with a per capita SDP not higher than the all States' average may be allowed Small Savings equal to 95%of net collections.

(2) The maturity period for small savings loans may be increased from the present 25 years to 50 years and the grace period on these loans from 5 years to 10 years.

Disincentives to diviersion of Institutional Funds to special deposits with the Government of India :

10.38 As explained in Chapter 8, the investment by the non-Government Provident Funds of their funds in Special Deposits with the Central Government is almost entirely a diversion from Market Borrowings and small Savings. The investment in these Deposits by the Insurance Corporation is partially so. Since Market Borrowings and small Savings are shared by the States while Special Deposits are not, the Special Deposits Scheme instituted by the Centre divert funds to it at the expense of the States. In order to compensate the States for reduced capital receipts by way of share in Market Borrowings and Small Savings, it is suggested that the Centre may give additional Small Savings loans to States equal to one-half of the net increments in the outstanding special deposits. The allocations among the States may be in proportion to their respective total share in Market Borrowings and Small Savings.

Share in Net Collections under the Public Provident Fund and the National Deposits Scheme :

10.39 Each State may be given a 15-Year loan, with a grace period of 5 years, at the usual rate of interest (that is, at the average cost of borrowing incurred by the Centre) equivalent to one-half of the net Public Provident Fund collections in the State in the particular year. Like wise each State may be given a 10-year loan equivalent to net collections of National Deposits in that State in the year.

Encouragement to Bond Issues by the State Undertakings :

10.40 The State autonomous enterprises may be permitted and encouraged to tap the domestic capital market by issue of Bonds secured against the fixed assets of these borrowings enterprises in the manner it is now being increasingly done by the Central enterprises.

Incentive to States for Externally Aided Projects :

10.41 An incentive is presently being given to the States for undertaking externally aided projects in the form of extra Central Assistance to States equivalent to 70% of aid disbursements. This amount may be treated as a normal incentive to the States, and not a extra Central Assistance, to undertake these projects so that the utilisation of available external aid is expedited and the country secures more free foreign exchange in the process in the form of aid disbursements as well as augments its total investible resources. This amount may even be treated as States' share in the external assistance initially secured by the Centre. The extra funds given to the States on this account must not cut into the Central Assistance available for distribution under the accepted Formula. The Centre may encourage individual States, or groups of States to undertake major irrigation and power projects with external aid so that more effective use may be made of the available aid. Such States or state groups as lack the competence to undertake large irrigation and power projects may be helped by the relevant Central organisation and undertakings to plan and undertake these projects, if need be, by themselves planning and undertaking these projects on turn key basis on behalf of the States on agreed terms. In this manner external aid may be effectively utilised to promote irrigation and power development in the States as well as to make extra resources available to the States under the incentive scheme for externally aided projects.

Treatment of State Enterprises at Par with the Central Enterprises in the Matter of External Commercial Borrowings :

10.42 As mentioned in Chapter 9, the Central Enterprises are now going in for a substantial commercial borrowing from abroad. This source of funds has remained more or less closed to the State enterprises so far. The Centre may now begin to provide equal access and encouragement to State enterprises to undertake beneficial commercial borrowing from abroad on reasonable terms.

Share in Deficit Financing :

10.43 In an economy, like the Indian economy, which is growing and getting increasingly monopolised, a certain amount of deficit financing may be possible without disturbing the general price stability. Indeed, some amount of deficit financing may be even necessary for ensuring the general price stability. This is because in such an economy there is a growing demand for money or monetary resources denoted as M3, to perform the various functions of money. To bring about a commensurate increase in M3 it is necessary to extend the so called reserve money for the monetary liabilities of the Reserve Bank of India which constitutes the base for monetary expansion. How much increase in reserve money is required to bring about a given increase in the economy's monetary resources is related to the incremental money multiplier defined as the increase in monetary resources per unit of increase in reserve money. For instance, if the money multiplier is 3, in order to expand M3 by Rs. 300 crores, reserve money will need to be increased by Rs. 100 crores. Government deficit financing has been traditionally by far the most important factor in India for increase in revenue money. A certain amount of deficit financing thus is necessary for, and compatible with, preservation of general price stability.

10.44 Under the arrangements in force since 1985-86, the scope for permissible deficit financing will be appropriated entirely by the Centre. It is only fair that the States may be given share in this. This may be done in the two ways mentioned below :

(i) Ceiling for authorised overdrafts by States may be progressively raised.

(ii) The States may each be given a 15-year loan equal to 50% of the deficit financing undertaken by the Centre in that year. The rate of interest on these loans may be current rate of discount of Treasury Bill as deficit financing by the Centre primarily means its borrowing from the R.B.I. against *ad hoc* Treasury Bills. The *inter-se* distribution of these loans among the States may be in proportion to the increase in their respective total S.D.P. at constant prices. The justification for this is that the growth of the economy, that is, the increase in GDP in real terms is the primary factor which creates the scope for permissible deficit financing. Since there is generally a delay in the availability of the SDP estimates of States, initially a tentative allocation of loans to States may be made. The necessary adjustments may be made in the loan entitlement of different States in subsequent years on receipt of the SDP data from the C.S.O.

Share in Deposits of the Surplus Funds of the Oil and other Central Undertakings :

10.45 If the Centre undertakes price adjustment with respect to commodities/service sold by the Central enterprises in excess of what is needed to meet the accepted norm for a sector reasonable return on the net worth of these enterprises solely to generate surpluses which could then be deposited with the Central Government to augment its capital receipts, the Centre may give adiditional grants to the States equal to the same percentage of the additional deposits thus secured by the centre as the States' percentage share in Union Excise Duties. This is because an equivalent inceresase in prices could also have been effected by appropriate adjustment in the

Union Excise Duties which would have yielded extra revenue to the States as their share of Union Excise Duties. The inter-State allocation of these grants may be in proportion to the States' respective share in the divisible amount of Central taxes.

Expending Utilisation of Institutional Credit for Financing the State Sector Investments :

10.46 At present, apart from the limited amount of institutional credit availed of primarily by the S.E. Bs, there is little utilisation of institutional credit for financing the State sector investments. One very important way to improve the States' financial position will be to make much larger use of institutional credit to finance development activities in the State sector. The financial institutions will insist on proper project preparation and are expected also to undertake adequate appraisal of these projects themselves before agreeing to finance these. This should result in a marked improvement on project preparation and appraisal. The financial institutions will also insist on proper financial performance of the borrowing institutions. This will oblige the State Governments and enterprises to adopt professional management and commercial operating criteria.

10.47 For use of institutional credit on a massive scale for financing State sector investments it will be necessary to take the following steps :—

(i) State's commercial activities may be increasingly entrusted to non-Departmental undertakings. The activities suitable for such transfer are : commercial irrigation power, forestry, fishing, road transport, urban development, urban water supply and sewerage, housing, dairy development, large and medium industries and mining.

(ii) State Government may limit themselves largely to providing the equity investment in the non-Departmental undertakings. These enterprises may draw their long-term loan capital to the maximum extent by borrowing from the financial institutions and by bond issues.

(iii) Bureaucratic (mis) management and excessive political interference are at present the biggest factors for the poor physical and financial performance of State enterprises. For a basic improvement in their credit-worthiness there will need to be a visible improvement in their financial performance. This will call for effective de-bureaucratisation and depoliticisation of these enterprises. A clear distinction must be made between the public accountability of these enterprises and undue political interference in their working. The former does not justify the latter. These enterprises will need to be provided with professional management and opportunity and ability to operate on commercial criteria and must no longer be treated as veritable fiefs of bureaucrats and politicians.

(iv) There must be a full compliment of financial institutions to provide development finance to the Central and State enterprises as well as the private business undertaking for all types of activities. The Centre is already well on the way towards creating or promoting such a term-financing institutional structure. It includes the Industrial Development Bank of India, the Industrial Finance Corporation, the Industrial Credit and Investment Corporation of India, and the Industrial Reconstruction Bank of India, the National Bank for Agricultural and Rural Development, the Rural Electrification Corporation, the Shipping Development Fund Committee, and the Housing and Urban Development Corporation. The Power Finance Corporation the National Housing Bank and the Urban Development and Urban Water Supply Financing Corporation are being set up in the current year (1986-87). Several gaps in the term-financing institutional structure still remain un-filled. There is need for independent term-financing institutions for the following activities : transport, communication, forestry, fishing, major and medium irrigation, dairynig and warehouses and commercial buildings. The communications have been included in this list because with the setting up in 1986-87 of the Mahanagar Telephone Nigam to run and develop the telephone services in Bombay and Delhi, and the conversion in the same year of the Indian Overseas Communication Service into the Indian Overseas Communication Corporation the communications have also begun to be organised as non-Departmenal enterprises.

(v) The biggest remaining lacuna in the term-financing institutional structure, however, is the lack of an apex term-financing institution to pool the country's investible funds and channel these into public (Centre, State and local), cooperative and private enterprises in accordance with national development priorities. To fill this lacuna it is suggested that an Investment Bank of India (IBI) may be set up at the earliest to serve as the apex institution for the term-financing institutional structure. Apart from its paid-up capital, reserves, unutilised provisions and unallocated surplus, it will draw its investible funds from the following :

(a) bond and debenture issues in the domestic market (which will be by far the most important source of funds);

(b) borrowings from the Government of India against external assistance or other-wise;

(c) borrowings from the RBI against National Industrial Credit (Long-term Operations) Fund;

(d) term deposits from the public;

(e) repayments by term-financing institutions and deposits of their surplus funds; and

(f) commercial borrowings from abroad.

The IBI may deal directly only with the term-financing institutions and not with the public. The maximum possible of funds may be channelled into the IBI. The Central Government must leave the IBI and other term-financing institutions to operate without political or

bureaucratic interference, on the basis of the guidelines approved by the National Development Council (NDC). It may be an important responsibility of the NDC to review the working of the term-financing structure annually or as often as may be necessary. Preferably the equity capital of these institutions may be held in due course jointly by the Centre and the States so that increasingly these may become truly national and not exclusively Central institutions.

(vi) In order to enable the public enterprises to claim their due share in the vast and rapidly expanding investible funds of the term-financing institutional structure, it will be necessary, apart from bringing about a radical improvement in the financial performance of these enterprises to extend the sphere of indicative planning in the public sector so that the development initiative of public enterprises in unshackled.

10.48 Implementation of the suggestions (i) to (vi) should put the State sector in a position to undertake much greater development activity in the sphere of its responsibility with less financial strain on the State Budgets. Adequately enlarged access to institutional credit will be a very effective instrument to free the States from their existing very heavy dependence on the Centre for investible funds.

Debt Relief :

10.49 Since the Sixth Finance Commission, the successive Finance Commissions have been providing the States a rather limited measure of debt-relief by cancellation (that is, write off of repayment) and rescheduling of some outstanding debts to the Centre. Since the States' debt to the Centre has grown to a huge amount (expected at Rs. 42739 crores at the end of 1986-87) and many States find the burden of debt service payments to the Centre extremely onerous and a major factor for their poor resources position for development, it is necessary for creating balanced Centre-State relations to provide the States a rather large dose of Debt relief mainly on the form of debt cancellation. The objective should be to enable the States to write off the greater part of such of their investments and loan and advances as are unlikely to yield them any significant return, and where there is also little chance of undertaking disinvestment of capital or securing repayment of loans. An adequate once-for-all dose of debt relief will improve the financial position of States by reducing their interest and repayments liabilities to the Centre to more manageable proportions.

Modification of the Loan-Grant Ratio to Central Assistance :

10.50 The current loan-grant ratio of 70:30 in Central Assistance inevitably leads to mounting States debts to the Centre. A large proportion of the State Plan outlay consists of current development outlay which creates no assets for the State Government. Another substantial proportion of Plan outlay does create assets but such as yield no direct return which might be available for servicing the debts to the Centre. Such assets include school and hospital buildings, roads, Government administrative building and the like. It is true that by promoting general economic development this outlay results in larger tax and non-tax revenues. But this indirect impact on States' revenues is seldom large enough to finance the additional debt service burden arising from the loan component of Central Assistance. Besides, there are other growing demands on the additional State revenue. In order to bring the loan-grant ratio in Central Assistance to nearer the directly remunerative-unremunerated ratio in State Plan Outlay, the loan-grant composition of Central Assistance may be revised to 50:50.

(6) Implications of the Resources Transfer Packages :

10.51 The various elements of the resources transfer package have been put forth above in rather general terms. Their quantitative implications need to be worked out as precisely as possible. It may then be necessary to make some adjustments in the suggested measures to work out an internally consistent, balanced and effective overall package that may be reasonably expected to lead to the desired balance in Centre-State financial relations. This package may be tried for a few years and some further adjustments may be made in the light of experience. When a satisfactory package has been thus evolved, legislative action may be taken to put it on a firm legal or even constitutional basis. Whatever Constitutional amendments are considered necessary for the purpose, these may be carried out.

10.52 The implementation of the above package will greatly reduce the role of the Devolution and the Central Assistance for State Plans in determining the quantum of the Centre-State resources transfer and its distribution among the States. Purely discretionary transfers, that is, those outside of Devolution and Central Assistance and also not bound by any formula with respect to their quantum and inter-State distribution, will be limited largely to Central assistance to States afflicted by natural calamities. No longer will five members of the Finance Commission and half a dozen members of the Planning Commission, who are usually there only for a while, supposedly determine and distribute a Centre-State resources transfer of over Rs. 70 thousand crores among the States over a 5-year period and thus shape their financial destiny. Instead the main bases of this transfer and of its distribution among the States would have been rationally determined and formed in a long-term comprehensive system of resources transfer. The usual terms of reference of the Finance Commission will then needed to be amended to reflect the new marginal role of this institution. This role will now better accord with what seems to have been Constitution makers' concept of it. Likewise, the National Development Council will need to modify the Central Assistance formula so as to adjust it to the marginal role envisaged for such assistance in financing the States' development activities. In general, the criteria for *inter se* distribution of any additional resources transfer that the Finance Commission or the NDC may recommend/approve may be as close as possible to the criteria recommended above with respect to the inter-State distribution of States' share in Central taxes except that a possible different package of special problems may be identified in each case. It is hoped that after the envisaged system of Centre-State resources transfer is implemented, the Centre

will be in no mood to undertake Central and Centrally-Sponsored Plan Schemes other than those related to crucial national objectives.

10.53. A view strongly supported by the Centre, possibly even floated by it, is that the Centre needs to be in command of vast resources which it could distributed among the States partly under a suitably designed formula, but also substantially at its discretion, to give heavy weightage to the relatively lower income States in the Centre-State resources transfer. This way, it is argued, it could provide a greater stimulus to the development of these States to enable them to catch up with relatively more developed States. The experience of the last 35 years does not substantiate this view. All through this period, the Centre had much larger own resources at its disposal than the States had, primarily because of its much wider tax base under the Constitution and its increasingly tightened grip on capital receipts. The Devolution and the Central Assistance formula for inter-State distribution of the resources transfers from the Centre were on the whole strongly and increasingly weighted in favour of the lower income States. Discretionary transfers were a substantial proportion of the total resources transfer. But the predicted consequences of these features of the Centre-State resources transfer generally did not follow. This is brought out in Table 10.3.

TABLE 10.3

Ranking of States According to Per Capita State Domestic Product at Current Prices*

	1960-61		1980-81		Improvement in Rank 1960-61 to 1980-81
	Per Capita SDP(Rs.)	Rank	Per Capita SDP(Rs.)	Rank	
Maharashtra	409	1	2,232	3	—2
West Bengal	390	2	1,573	5	—3
Punjab	366	3	2,760	1	2
Gujarat	362	4	1,944	4	..
Himachal Pradesh	359	5	1,515	6	—1
Tamil Nadu	334	6	1,336	11	—5
Haryana	327	7	2,331	2	5
Assam	315	8	1,201	15	—7
Karnataka	296	9	1,453	8	1
Rajasthan	284	10	1,222	13	—3
Andhra Pradesh	275	11	1,358	10	1
J. & K.	269	12	1,455	7	5
Madhya Pradesh	260	13	1,149	16	—3
Kerala	257	14	1,421	9	5
U.P.	252	15	1,272	12	3
Tripura	249	16	1,206	14	—2
Orissa	216	17	1,101	16	..
Bihar	215	18	929	18	..

*Excludes the four mini States of Manipur, Meghalaya, Nagaland and Sikkim formed after 1960-61. An added reason for their exclusion is that in their case the statistical informaion is likely to be even more unreliable than it is with respect to the generality of States.

SOURCE : Compiled from Indian Economic Statistic—Public Finance, op. cit. Table 11.3 P. 102.

10.54 Table 10.3 brings out the following position with regard to changes in the relative ranking of States according to per capita SDP over the period 1960-61 to 1980-81 :

(1) There is no change in the ranking of Bihar and Orissa. They remain the poorest States in India inspite of the heavy resources transfer from the Centre to these States under both Finance Commission and Planning Commission formula for inter-State distribution of Devolution and Central Assistance from the Centre.

(2) The maximum improvement in rank (by 5 positions) has been in the case of Haryana, Kerala and J. & K. In the case of neither, Haryana nor Kerala, this improvement is attributable to heavy resources transfer from the Centre. Haryana owes this improvement principally to the spread of the Green Revolution. Indeed, Haryana and Punjab are the two States which have been treated most harshly by the Finance Commission and the Planning Commission with regard to their entitlement to Devolution and Central Assistance. A major factor for the improvement in Karala's ranking has been the large inflow of remittances, mainly from the Gulf countries. Other contributory factors have been that plantation, agriculture has made a relatively good showing and several large Central and other industrial units have come up lin the State. Only in case of J & K , very heavy flow of Central Assistance and Devolution has been the major factor for improvement in the ranking.

(3) There has been an improvement in U.P.'s ranking by 3 positions. It is primarily attributable to the spread of the Green Revolution to western U. P. The heavy transfers from the Centre have played, if at all, only a secondary role in this improvement.

(4) Punjab has improved its ranking by two positions. This is primarily attributable to the Green Revolution which was, indeed, pioneered by Punjab.

(5) There has been only a marginal improvement in ranking (by one position) in the case of Andhra Pradesh and Karnataka. In the case of Karnataka, the sitting of several large Central industrial units and institutions at Bangalore has been a contributory factor. This State has not been among the favoured ones in the matter of Devolution and Central Assistance transfers.

(6) There has been a dramatic deterioration (by 7 positions) in Assam's ranking. This has not been due to any disadvantage in the matter of share of Devolution and Central Assistance. Indeed, as a special category State, it enjoys a very favourable treatment in the matter of inter-State distribution of Central Assistance. The Devolution criteria have also been favourable to it. The principal causes of its decline have been political instability, the uncontrolled annual floods in the Brahmaputra and its tributories and the severe disadvantages inherent in the States' remoteness.

(7) There has been a large decline in T.N.'s ranking (by five positions). This is only partially attributable to unfavourable treatment in the inter-State distribution of Devolution and the Central Assistance. The State's poor water and energy resources are a major constraint on its development.

(8) West Bengal has suffered a decline of 3 positions in ranking. This is attributable to a considerable extent to political factors which are responsible for the State's low key efforts at resource mobilisation, its rather low efficiency in resource use and inadequate private investment and enterprise. The inadequate flow of resources from the Centre is only one factor, perhaps not the most important factor, for the deterioration in its ranking.

(9) Rajasthan and Madhya Pradesh have also suffered a decline of 3 positions in their ranking. This has happened in spite of the fact that both are favoured States in the matter of resources transfer from the Centre.

(10) Tripura has suffered a decline of 2 positions. As a special category State it received a favourable treatment with regard to distribution of Central Assistance. The Devolution criteria are also favourable to it. Neverthelses, it has suffered a deterioration in ranking primarily because of (i) the disadvantages of remoteness and (ii) the conflict between its tribal and non-tribal population.

(11) Himachal has suffered a deterioration of one position in its ranking. This is surely not due to unfavourable treatment with respect to resources transfer. As a special category State it receives a very favourable treatment in the distribution of Central Assistance. The Devolution criteria also worked to the States' advantage.

(12) There has been a deterioration of one position in Maharashtra's rank. The decline relatively to Punjab and Haryana is due primarily to its failure to stage a Green Revolution comparable to that which swept the latter two States. This failure is primarily attributable to its poor water resources and a very low ratio of irrigated to cultivated area. Maharashtra's relative lack of progress in agricultural development (in areas other than sugar cane cultivation) has substantially neutralised the impact of its good industrial progress.

10.55 Among the top nine States in 1960-61, seven have remained in this group. Only two went out of this Group, namely, Assam and Tamil Nadu. In neither case the primary factor for the deterioration in ranking has been the low resources transfer from the Centre. Among the bottom nine States in 1960-61, only two rose above the Group, namely, Kerala and J. & K. The heavy resources flow from the Centre was a major factor for improvement only in the case of the latter. All the above evidence provides little support for the argument that the command of large financial resources by the Centre and its exercise of discretion with respect to a substantial proportion of the transfers to the States have been major factor for evening out inter-State development disparities.

10.56. Even if it is granted, for the sake of this analysis, that the Centre did intend to contribute to moderation of Inter-State inequalities, it failed to make any significant progress in that direction because of a number of reasons that have been mentioned below.

10.57 Firstly, the Centre utilised a substantial proportion of its very large resources for purposes largely unrelated to moderation of inter-State inequalities. It will not do to cite, as is often done the location of the Rourkela Steel Plant in Orissa, the Bhialai Steel Plant in M.P. and the Bokaro Steel Plant in Bihar in refutation of this observation. The location of all these steel plants was determined primarily because of the economy in costs of raw material assembly and despatch of products which the three sites provided. In case of any doubt on this point, reference may be made to the project reports of these plants. This is, indeed always the first consideration in the choice of location of a weight-losing industry which involves assembly of 5-6 million tonnes of raw materials for every million tonne of products despatched. To site a steel plant primarily as a device to help even out regional inequalities would be like using an electric hammer to kill a fly. Equal investment on other programmes and project better suited to promoting development of backward regions would have had an incomparably more powerful impact on the development of the concerned regions than what the steel plants have had. One does not have to go very many miles from these plants to see largely as bleak and backward human existence as it was before the steel plants were built.

10.58. A substantial amount of Centre's vast resources has been absorbed in providing the country a much more expensive administration than what the generality of States have in terms of the proliferation of staff, employee emoluments and perquisites, the facilities enjoyed by the ruling or even the opposition politicians and the generally expensive work style. With regard to the costliness of administration, the Centre, because of its much larger resources, has often set the pace, in the process creating severe unanticipated financial problems for the States. Again, as explained in Chapter 9, the Centre has used large amounts of its resources to encroach on the States' jurisdiction. Still again, the Centre has undertaken very large investments in all manner of activities ranging from manufacture of cycles to that of metallurgical and mining equipment. These investments, with some notable exceptions, have yielded meagre physical and financial results. Instead of serving as growth poles for the development of the regions of their location, many of the Central undetakings have become a problem to themselves, the Centre and the country. In all these activities the claimed consuming concern for uplift of backward States is not much in evidence.

10.59 As brought out in Chapter 9, irrational criteria for transfer of the Centre's surplus resources to the States have been adopted. The gap filling approach has encouraged the many of the low income States, who receive relatively much more liberal resources transfer, to undertake wasteful and extravagant expenditure. They have had a poor motivation to carefully husband their resources

and made efficient use of resource transfer and their own resources to catch up with the relatively more developed States.

10.60 The ruling strata in the relatively backward States, while they have claimed in the name of the poor and the backward of these States, a highly favourable treatment for their States with respect to distribution of resources transfer from the Centre, have actually used these transfers substantially for their own economic and political benefit. Another important use of these transfers by the ruling strata has been to avoid adequate additional taxation the burden of which will fall on them more heavily because of their larger capacity to pay. In other words, the resources transfers from the Centre have often substituted and not reinforced the resource mobilisation efforts of the concerned States.

10.61 The Industrial projects undertaken by the Centre in the relatively backward States have generally have had a poor linkage with the economy of the States where these projects are located. A large proportion of the better paid personnel have been imported from other States. In general these projects have had very weak spread effects. Very often these projects have turned out to be more a device to exploit natural resources of the region than a means of uplifting and boosting the State economy.

10.62 In many of the relatively backward States, the primary constraint on growth has been not so much the paucity of funds as other adverse factors such as political instability, poor administration, institutional weaknesses or extremely unfavourable natural environment. Finance is not a universal panacea for all ills. There are some development problems which do not respond to exclusively financial treatment. In these circumstanccs, the intended stimulus to growth has to begin with measures to overcome these adverse factors till the environment for growth is favourable enough and a reasonable response to stepped-up outlay is assured. In serveral States the persistence of non-financial constraints on growth has rendered largely ineffective the enlarged flow of resources from the Centre. The States of Bihar, Orissa and Assam readily come to mind in this context.

10.63 Any rational system of Centre-State resources transfer must be duly redistributive. The package of measures for resources transfer suggested above has very much kept this consideration in view. It is ardently hoped that the required complementary measures to create more favourable conditions for growth will be undertaken by the concerned states and encouraged by the Centre so that these State can put the financial flows to good effect. There is, however, no rational argument for the extreme, one-sided adoption of redistribution as the only valid criterion for inter-State distribution of the resources transfer. Such a stance will be positively inimical to national unity and co-operative federalism. It will also hamper efficient resource use. It will very probably level down some of the present relatively developed States but it is most unlikely to level up the relatively backward States. This process is already at work to a certain extent, though perhaps it is not yet visible enough. It is time to do basic re thinking on the subject. The above is an effort in this direction.

An Irrational View :

10.64 There is a videly held belief in the inherent fairness of per capita equality of benefits and other desired quantities, whereas per capita inequality in this respect is considered unfair and undesirable. In accordance with this belief an allocation of Devolution or Central Assistance or Plan outlay is unfair if its per capita amount is lower in the case of lower income States. As a typical double-think, which is a characteristic of this belief, this criterion of fairness is never applied to allocation of costs or efforts. It is not considered unfair if the lower income States show a lower amount of per capita tax revenue or own resources for the plan. If this inequality were also to be considered unfair, the irrationality of this belief would be immediately exposed.

10.65 An allocation of Devolution, Central Assistance or Plan finance is not inherently unfair simply because it leads to unequal per capita plan outlay among the lower and higher income States. What the backward States or countries need in order to eventually catch up with the more advanced States or countries is not equal or higher per capita amount of development or investment outlay but, assuming an equally efficient resource use, a higher ratio of development or investment outlay to gross domestic product (GDP). An example would clarify. According to the World Bank Report 1985, the per capita GDP of India and Germany (FRG), in terms of US dollars, was $1,229 and $ 10,636, and their per capita gross domestic capital formation (investment for short) was $ 57 and 2234, respectively. For every 100 dollers invested by FRG, India invested only 2.6 dollars, a very unfair situation according to the above belief. Acutally it was not at all unfair. Rather was a very satisfactory performance by India. India had a higher investment ratio or rate of capital formation in that year, 25 per cent as against FRG's 21 per cent. And this is all that is needed, as far as the investment outlay is concerned, for India to narrow in the end hopefully to close the income and development gap with Germany. India was in fact actually doing this. According to the same World Bank Report, over the 10-year period, India's GDP had been growing at the rate of 4 per cent per annum while Germany's was growing at only 2.5 per cent. Naturally India was narrowing the per capita income gap vis-a-vis Germany, even if yet rather inperceptibly. India's per capita GDP had risen from 1.9 per cent of Germany's in 1973 to 2.2 per cent in 1983. A very slow progress indeed, but progress nonetheless. The extreme inequality (of 1:38) between India and Germany in the matter of per capita investment outlay did not prevent India from growing faster than Germany. This was because India's per capita investment, though a much lower per capita amount, represented a considerably higher ratio or rate of investement. This was surely not too unfair.

10.66 Suppose a votary of per capita equality had insisted that Germany's per capita investment outlay must be brought down to the Indian level of $57, and that he was able to enforce this, this would have brought down Germany's rate of capital formation to a mere 0.5 percent. Any economist worth his salt will tell that, in this event, there will be a complete collapse of the German economy. This is what per capita equality of development and investment outlay between economies with very different levels of

per capita income will inevitably imply. On the same analogy, if per capita equality of development or investment outlay were to be enforced between Punjab, Haryana, Maharashtra and Gujarat, on the one hand, and Bihar and Orissa, on the other hand the economies of the former States may not collapse, because the per capita income difference between above two categories of States is not as large as between Germany and India so that there would not be as disastrous a decline in the rate of development or investment outlay of the former group of States, but undoubtedlly their economies will be forced into near stagnation while Bihar and Orissa will not be able to make an efficient use of the greatly enlarged resources transfer to them. What this belief then implies is inter-State equality by levelling down the presently more developed States, and not by levelling up the States that are relatively backward to day.

10.67 For levelling up of the present relatively less developed States what is required is to ensure them a rate or ratio of development of investment outlay comparable or even appropriately higher than the corresponding rate or ratio shown by the relatively developed States. It is also at least as important to encourage and support the former States to overcome their present constraints on adequate efficiency of resource use. The quantum of resources transfer from the Centre to the States, and the criteria for determining its inter-State distribution, must be such as conform to this approach to greater equality among the States.

10.68 The forgoing discussion must not be taken to lead to the conclusion that the balanced Centre-State financial relations are a matter of only a large enough resources transfer from the Centre and its distribution among the States on a fair combination of the compensation and redistribution criteria. The States have to secure this balance primarily by their own efforts at resource raising, economy in non-development expenditure and efficient use of development outlays. In the absence of such efforts, there is a real danger that the contemplated additional resources transfer will substitute and not supplement the States own efforts at resource mobilisation, there already exist several examples of this. A glance at the State's financial data will show that in the case of several of them there is no reasonable relationship between (i) the Central Assistance received by them and their own resources (including Devolution) for the plan, (ii) their revenue from State taxes and their State Domestic Product, and (iii) their own tax and non-tax revenues and their non-plan expenditure. If the additional resources transfer merely substitutes for the States' own resource raising efforts it will be a distressing anti-climax to all the efforts at reconstruction of Centre-State financial relations towards a fair balance between the two. States, on their part, must perform their due role in securing such a balance.

States and The Planning Process

11.1 The Planning organisation and procedures must accord with the envisaged role and content of planning in the economic and social development of the country. In other words, it must be conditioned by (i) the particular institutional context of planning; (ii) the accepted development goals and strategy; and (iii) the chosen pattern of development. These crueial elements of the existing contex of Indian planning are discussed below towards identifying its proper role and content.

(1) The Planning Context

A. Large Private Sector :

11.2 At the end of over three decades of planning, in 1983-84, the latest year for which relevant data are available, the public sector generated 21 per cent of the Gross Domestic Product (GDP) and used 48 per cent of the Gross Domestic Capital Formation (GDCF). The respective share of the public administration, the public enterprises and the private sector in these is given in Table 11.1.

TABLE 11.1

Origin of GOP and the use of GDCF by Institutional Sectors

Sector	Origin of GDP				Use of GDCF			
	1970-71		1983-84		1970-71		1983-84	
	Rs. Crore	Per cent	Rs. Crore	Per cent	Rs. Crore	Per cent	Rs. Crore	Per cent
1	2	3	4	5	6	7	8	9
1. Pubic Sector	5,456	13.6	40,678	21.0	27,773	38.6	21,773	48.0
2.1 Public Administration	2,401	6.0	13,511	7.0	581	8.1	4,848	10.7
2.2 Public Enterprises	3,055	7.6	27,167	14.0	21,92	30.5	16,925	37.3
(i) Departmental	1,453	3.6	6,701	3.5	843	11.7	5,322	11.7
(ii) Non-Departmental	1,602	4.0	20,466	10.5	1,349	18.8	11,603	25.6
2. Private Sector	34,807	86.4	153,163	79.0	4,404	61.4	23,575	52.0
3. Total (1+2)	40,263	100.0	193,841	100.0	7,177	100.0	45,348	100.0

SOURCE : CSO National Accounts Statistics 1970-71 to 1983-84, Jan, 1986. Statements 18 and 25.1 and Appendix A1, PP 52, 72 and 156-157.

11.3 Table 11.1 shows that as late as 1983-84, the private sector generated 79% of the GDP and used 52% of the GDCF. The data on inter-sectoral distribution of GDCF given in the Plan documents in the past which usually suggested that the larger part of investment was being allocated to the public sector were just phoney. The subsequent CSO estimates of this distribution did not support this claim. The Seventh Five Year Plan projections which allocate 47.8% of the envisaged investment to the public sector and 52.2% to the private sector* for the first time put forth more realistic anticipations in this respect. The larger share of the public sector in gross capital formation than in the generation of GDP is largely accounted for by the generally higher capital intensity and longer gestation period of public sector projects compared to the private sector investment, and the generally much higher capital costs and lower capacity utilisation in that sector. As a result, to secure a given increase in GDP generated, the public sector has to undertake much larger investment.

11.4 The fact that the private sector still accounts for the larger part of the economy both in terms of origin of GDP and use of GDCF as important implications for the charactar of Indian planning. This fact is particularly relevant for deciding on an appropriate mix of mandatory and indicative planning.

An Extensive Unorganised Sector :

11.5 The second important element of the planning context is that within the private sector the unorganised or household sector still remains predominant and the organised or corporate sector, though growing at a higher rate still remains by far the smaller segment of this (the private) sector. The relevent data are presented in Table 11.2.

TABLE 11.2

Origin of NDP† and use of GDCF in the Private Sector by Organised and Unorganised Sub-Sectors

	Origin of NDP				Use of GDCF

†The breakdown of GDP is not available.

11.6. Table 11.2 shows that the share of the organised private sector is rising both in generation of Net Domestic Product at Factor Cost (NDP) and in use of GDCF but at a very slow pace. In 1983-84, the unorganised sector accounted for 83·2% of NDP and 73·3% of GDCF. This characteristic of the Indian economy is of importance for the purpose of deciding on appropriate planning techniques. Effective planning requires that undesirable developments in the economy must be prevented and the preferred developments must be promoted. Physical controls such as industrial licensing, licensing of imports, control of capital issues and foreign exchange control as a means of preventing undesirable development are feasible (though not necessarily advisable) only in the organised private sector. In the unorganised sector, it is necessary to use indirect methods for the purpose. With regard to promotion of preferred development, in the entire private sector comprising both its organised and unorganised segment, there is no choice but to use indirect methods.

A quasi-Federal State Structure :

11.7. The country has a quasi-federal state structure. The two basic levels of Govennment are the Union and the States. This necessitates multi-level planning.

(2) The Development Goals

11.8. Planning must derive its orientation from the country's accepted development goals, otherwise it will lack a firm direction. The question "How to go ?" assumes that a decision has been taken with respect of "Where to go?". The country did take such a decision 30 years ago.

11.9. Since the mid-1950s, the professed basic development goals and strategy have included accelerated growth, social justice, economic self-reliance, stability and preservation of a democratic framework. The emphasis as between the different elements of the development philosophy has no doubt varied

from time to time but these goals have been affirmed again and again by the ruling party at the Centre and neither of these goals has yet been repudiated formally. Of course, actual practice is another matter.

Growth with Social Justice :

11.10. The goal of poverty removal which in the early 1970s gripped the imagination of the people is a concrete expression of social justice. It requires accelerated growth together with reduced inequality of income and wealth. It is not feasible to rid the country of mass poverty in the foreseable future by moving only in one of these directions.

11.11. An aspect of the prevailing economic inequality is the existence of unacceptable inter-State and intra-State differences in the level of development. These differences militate against emotional integration and fraternal feelings among the people of different regions within a State and among the people of different States. This creates problems for consolidation of national unity which alone can provide a solid assurance for the country's integrity.

Growth and Sectoral Change :

11.12. A sustained high rate of growth will necessarily involve a structural change in the economy towards the characteristic structural profile of an advanced, industrialised, self-reliant and dynamic economy. This change, if it is not engineered and steered properly, can involve a tremendous cost in terms of sacrifice of human welfare and social justice. The slum pavement dwellers in Indian cities are but one aspect of this cost. In order to harmonize the growth objective with other development objectives, the inevitable structural change will need to be accomplished at minimum cost in terms of resources, time and avoidable economic and social dislocation.

Growth and Efficiency of Resource Use :

11.13. If the country's human and material resources continue to be used as inefficiently as at present, the attempt to have an adequate rate of growth will either prove abortive or will involve too heavy a burden in terms of sacrifice of present consumption to release the required order of resources for investment. There is also the possibility that in an attempt to keep this sacrifice within acceptable limits, the country may be tempted to resort to excessive borrowing from abroad and at the end may achieve neither adequate rate of growth nor self-reliance. Indeed, the country is now passing through such a phase. Reasonable efficiency of use is an essential condition for the country to achieve the accepted growth and other development objectives.

Economic Self-Reliance :

11.14. It has all along been the common view in India that without economic self-reliance the country's political independence and State sovereignty will continue to be constrained in substance. It has generally been held that financial self-reliance is an essential pre-requisite for India to secure its due place among the nations of the world and an effective role in world affairs. Financial self-reliance has been defined since the Third Plan as the elemination of external assistance outside of the normal flow of foreign Capital while maintaining a satisfactory pace of development. It is the height of sophistry to interpret this statement of the self-reliance goal to mean that it is compatible with large scale inflow of foreign funds on normal commercial terms. A glance at the long-term balance of payments projections worked out at that time and for many years thereafter would show that no large scale inflow of foreign funds in any form was contemplated on attainment of self-reliance. This goal never meant merely "graduating out of external assistance" as advocated by the West particularly the Reagon Administration, for India, Self-reliance understood as graduating out of large scale concessional aid into equally large, but more expensive foreign direct investment and commercial borrowing, would have been patently absurd as a development goal.

11.15. Self-reliance defined as virtual elimination of net inflow of foreign funds implies that domestic capital formation must be financed almost entirely by domestic saving. Again, since a deficit in the current account balance of payments implies an equivalent net inflow of foreign funds to finance it, the virtual elimination of a net inflow of foreign funds requires that the current account payments deficit must be wiped out. All three are equivalent definitions of the accepted self-reliance goal. This goal thus mean that while securing and maintaining an adequate rate of capital formation, any deficit in the current account balance of payments must be virtually eliminated so that no inflow of foreign funds is necessary to finance it. In this situation domestic capital formation will be necessarily financed by domestic saving. This is a major task for Indian Planning which of course, like all its other development goals as yet remains unfinished.

Economic Stability :

11.16. "Growth with Stability" is an oft repeated precept of Indian development philosophy. It implies avoidance of unacceptable inflation as well as of a widespread slack in the economy. Actually the problem most of the time is actual or apprehended inflation. Economic stability also implies maintenance of reasonable stable expectations about the future policy framework so that save's, investors and entrepreneurs can plan their activities on a long-term basis.

Consolidation of the Democratic Framework :

11.17. Preservation, consolidation and enrichment of the democratic framework is an important end in itself. It is also an indispensable means to orderly and irreversible economic and social progress. It is ardently hoped that progress towards accelerated growth, social justice, self-reliance and economic stability will facilitate consolidation of the democratic framework.

(3) The Pattern of development

11.18. Notwithstanding all the claims and declarations with respect to the adoption of a socialist pattern of development, the country has been pursuing all along a capitalist pattern of development. In the private sector which is the source of 85% of GDP (excluding GDP generated in Public Administration). Capitalist production relations are spreading though the pace varies with activities and regions and is, on the whole, rather slow. The private corporate sector

which is now the source of 16·8% of total factor incomes generated in the private sector represents the highest level of capitalist development. That capitalist production relations are also spreading in the household or unorganized segment of the private sector is shown by the fact that the compensation of empioyees accounts for about a quarter of the aggregate factor incomes generaged in this segment.

11.19. The public enterprises are not a socialist but a state-capitalist formation. They represent capitalist enterprises by the State. Their essential role is to promote overall capitalist development by filling the gaps in the development process resulting from the fact that certain activities (for example, infrastructural development) are unattractive to private enterprise or are beyond their competence (because these involve very heavy, longestation or risky investment). The public sector undertakings are financed by borrowing private funds and not by public saving generated by tax and non-tax measures. The growth of the public sector is therefore, associated with private wealth formation in the same manner as is the growth of the private capitalist enterprise. Any surplus generated by them is largely, often wholly, used up in servicing the public sector debts incurred in financing these enterprises and is not a resource for financing further public sector development of other social needs.* Their management is very largely drawn from upper class bureaucrats and technocrats and not from public sector trained and promoted former workers. Indeed the workers have as little real say in running those enterprises as in the private capitalist sector. The management structure and ethos is very much bureaucratic and capitalistic and not socialistic. They are marked-oriented just as private undertakings are. The privatisation of these enterprises is a shift within the capitalist formation and not from one system to another and hence can be undertaken rather smoothly. The relationship between the public sector and the private sector is fundamentally complementary and not antagonistic.

11.20 Out side of infrastructural activities, the state capitalist sector is engaged only in a transitional role. It must in course of time largely fade away from the activities which come within the competence of private enterprise as it gains in resources and experience. The public sector was never in the light industry in a big way. It is now reducing its role even in some segments of heavy industry. For instance, its role in heavy machine building is definitely on the decline. The private sector has now been invited to enter the refining phase of the oil sector. This might prove the thin edge of the wedge. The private sector is being assigned an increasing role in the fertilizer industry. Only one out of the six new gas based plants that are being set up will be in the public sector. @The telecommuncation industry has been thrown open to the private sector. Even certain areas of infrastructural development are being thrown open to it. The private sector is now welcome into electricity generation, if it chooses to enter this activity. The public enterprises which are persistant loosers are being threatened with withdrawal of public support which will mean their liquidation. The public sector is losing interest in chemicals and pharmaceuticals. All this is no doubt the beginning of a new phase. When private enterprise becomes a feasible alternative to State-capitalist enterprise, the latter usually starts yielding place to the former. As between the two, state-capitalism generally proves an inferior alternative from the standpoint of efficiency of resource use. At this stage the inherent shortcomings of state-capitalism are increasingly felt. This lends further support to the trend away from state-capitalism. India has now entered this phase.

(4) **The Role of Planning**

11.21 With the exception of a small but vocal and influential minority, it is commonly believed in India that the accepted development goals cannot be achieved together in a development process which relies on a free play of market forces and that, even in an essentially capitalist pattern of development, planning of the appropriate kind is very much needed to overcome and offset the negative features of a free market mechanism, to make up its deficiencies, and to use the positive aspect of market forces for realisation of the national goals. The planning must be efficient, judicious and one that accords with the socioeconomic context in which it is operating. Inefficient, illconceived and out of context planning might do more harm than good to the country's development activity and might turn out to be worse than no planning.

11.22 In the prevailing situation where the country is pursuing a capitalist pattern of development and no other perspective is in sight, the planning process has to seek the realisation of the accepted national objectives by promoting the creation of as dynamic, self reliant, stable and human economy as may be possible under this pattern of development. Any view that the role of planning today is to progress towords the cherished goals by promoting socialist transformation of the economy and its development on socialist basic bears no relationship to the prevailing context or a realistic perspective. The content, organisation, techniques and policy framework of Indian planning must be suited to its present task.

(5) **The Content of Planning**

A. *Combinationof Mandatory and Indicative Planning :*

11.23 In keeping with the present context and role of planning, a plan may comprise two parts : (i) the mandatory part and (ii) the indicative part. The mandatory part may include specific projects and programmes of basic development proposed to be undertaken in the public sector. In other words, it may cover core development activities of this sector which are of importance for the overall development process. The term mandatory in this case is to be undertaken to indicate firm intention of public authorities with respect to the particular developments. It does not mean that the failure to undertake these projects and progremmes, or to invest the

* The large surplus generated by some of the oil undertakings in the Central sector represent not so much profits of enterprise as gains of monopoly and are to this extent akin to indirect taxes in their economic significance.

@Seventh Five Year Plan 1985-90, Vol. II, Para 7.126, pp. 183-84.

amount provided for these, will attract any legal penalties. The entire development activity in the private sector as well as the non-core development in the public sector may figure in the indicative part. In this part of the economy public policy will seek to influence development to the extent considered necessary, only by indirect methods. Indicative here implies that the projected developments reflect the planning agency's informed judgement as to what is required and ought to be feasible. It is necessary to exclude non-core development activities of Central and State Government Departments and public enterprises from the mandatory part of the plan to leave them with due initiative for undertaking preferred development. The inclusion of the entire public sector development activity in the mandatory part, as is being done at present, seriously stifles the initiative of public sector authorities and enterprises and puts those at a considearable disadvantage compared to the private sector undertakings. Whereas the mandatory part prescribes targets, the indicative part gives projections of major directions of development to provide expert guidance to savers, investors, entrepreneurs and implementation agencies.

An Appropriate Policy Framework :

11.24 The indicative planning will cover the greater part of the economy's development activity. With growing competence of private enterprise, more development activities may be left to private initiative. Again, as the public authorities and enterprises become more adept at exercising development initiative, indicative planning may grow in coverage and importance even with respect to the public sector. This underlines the importance of an appropriate policy framework for efficient indicative planning. The fact that physical controls have a very limited reach, mainly confined to the public and private organised sector, and that these controls are an instrument for prevention of undesirable development and not for promotion of preferred development, makes such a policy framework all the more an imperative necessity.

11.25 Decision making with regard to policy issues is today the weakest aspect of the planning process in this country. Development policies are being determined increasingly by the Prime Minister's Secretariat, the Finance Ministry and the economic Ministries in the given order of importance. The Planning Commission often has to face essentially a *fait accompli.* Its association with decision making on development policies is often peripheral and formal rather than intimate and substantive. In this matter, the proper decision-making sequence ought to be that the Planning Commission takes initiative in working out policies on the basis of adequate study and research, with due regard to the accepted development goals and the internal consistency of the total policy framework. The Planning Commission proposals are then referred to the concerned Ministries and Departments for consideration and discussion and finally put up to the Union Cabinet for approval. If the particular policy affects also the States, the final step in the adoption of the policy may be reference to the States, and, in the case of very important policies, approval by the National Development Council. No such esquence is being followed those days. The Prime Minister's Secretariat and the Ministries enuciate policies which are sometimes inconsistent with the accepted development goal and the other elements of the policy framework. The Planning Commission, in many cases, after making a show of serious examination of proposed policy and expressing a few minor misgivings about it, is in the end obliged to concur with those, lest it be accused of too negative and obstructive a role in decision making. It is just not the tradition to consult the States even if the new policy is of-vital concern to them.

11.26 Apart from the widespread loss of faith in the planning process and the Planning Commission, one reason for the latter's declining role in the making of development policies, which is indeed its very legitimate function, is that the generalist bosses who head many of its Divisions are not trained for research on policy issues and are in no position to advise the Commission properly on these issues. In the prevailing work culture in the Planning Commission even the technical personnel have lost the tradition of policy oriented research. Every badу is steeped in day to day routine matters which in fact ought to be completely excluded from the purview of the Planning Commission. With regrd to association with development policy making, the Deputy Chairman, no matter how competent, is no real substitute for an effective Planning Commission.

11.27 If the policy frame is to be internally consistent, appropriate and relevant to the country's accepted development goals and strategy, it is necessary to assigned the national Planning organisation a leading role (surely not the sole responsibility) in decision making with regard to laying down and adjustment of development policies. This is necessary, among other things, for efficient indicative planning covering the greater part of the economy.

(6) The Time Horizons for Planning

11.28 The development activity oriented to the creation of an advanced, industrialised dynamic and self-reliant economy will necessarily involve planning and implementation of many long gestation projects. Its frequent changes in the scope and technology of projects, with inevitable wastage of resources and prolongation of the construction period are to be avoided, planning must be undertaken in a long enough time horizon. The Third Plan outlined a 15-year development perspective. The Fourth Plan did his in a 12-year time perspective. The Fifth Plan again chose a 15-year period for its long-term perspective. The Sixth and the Seventh plans have also done the same. It looks that at the expected pace of technological and structural change in the future 15 years may be too long a period for making out a long-term development perspective. Many of its elements may be rendered obsolete by new developments long before the completion of this period. There is therefore, a danger of taking wrong medium-term planning decisions with reference to such a perspective. The long-term perspective may be preferably worked out in a 10-year time horizon. The medium-term and short term planning may continue to have as at present a five-year and one-year time horizon.

The Long-Term Perspective

11.29 The 10-year development perspective may have no mandatory part. It may be essentially on informed, expert and fairly comprehensive projection

of the economy's profile ten years hence consistent with satisfactory progress towards realisition of the country's accepted development goals. It must be a truly scientific exercise free from the fads and fencies of the planners and the power wielders in general. It should involve a scientific projection of the country's demand and production structure taking into account the development objectivities, the technological trends, the economy's resources, capabilities and domestic and foreign market opportunities, the trends in distribution of income and wealth, and the scope and limitations of public policy for influencing the demand and production structure. There must be a financial perspective to math the physical perspective. The implied institutional change and institution building must be spelt out. Finally, there must the adequate elaboration of the envisaged policy framework.

11.30 The long-term perspective presented since the Third Five Year Plan as part of the successive Five Year Plans is a very patchy and incomplete exercise. It provides little guidance for the preparation of the Five Year Plan. The preparation of the Five Year Plan and the long-term perspective were concurrent, independent and unrelated exercises. The 10-year development perspective henceforth should be an adequate exercise. It may be undertaken concurrently with the mid-term review of the Five Year Plan. The perspective would then be available by the time the work begins on the next Five Year Plan and could provide useful giudance for it. The working out of the long term perspective should be a major undertaking of the planning organisations at different levels.

The Five Year Plan :

11.31 The five Year Plan may undertake a review of the development of the economy during the previous Five Year Plan period. This review must be an uninhibited and proper evaluation of both the successes and failures experienced during this period in economic development and Plan implementation. If any of the failures are attributable to faulty planning this must also be brought out unhesitatingly. The review must not indulge in uncritical appreciation of planning and implementation of the nature of a Government publicity material. Conclusions drawn from this review may be made use of in working out the new Five Year Plan. At present every Five Year Plan does incorporate a review of development during the previous five years or even a longer period but it is much below the requisite standard.

11.32 The Five Year Plan may, like the ten years development perspective and in line with it, spell out the envisaged demand and production structure five years hence. The Plan may work out the financial implications of the envisaged development in terms of its requirements of rupees finance and foreign exchange, and work out realistic scheme for financing these. In order to facilitate financial planning the Five Year Plan period may be made coextensive with the reference period of the Finance Commission. The fact that the 5-year period of the Seventh Plan began one year after the commencement of the reference period of the Eighth Finance Commission created several Conceptual and computational difficulties for the two Commissions.

11.33 Unlike the 10-Year perspective, the Five Year Plan may comprise two parts-the mandatory and the indicative. The line of demarcation between the two parts may be drawn up as suggested above. Briefly, the basic long-gestation projects and the key programmes to be taken up in the public sector may be included in the mandatory part. All other development activity envisaged to be undertaken during the 5-Year period may be outlined in the idicative part. Adequate attention may be given to spelling out the main elements of both the parts. At present the Plan concentrates mainly on the mandatory part which is treated as co-extensive with the public sector. Development activity in the private sector receives scant attention even though it accounts for the larger part of the total anticipated increase in GDP and of the gross capital formation expected to be undertaken. There should be a more even balance in the treatment of the mandatory and the indicative part of the Plan.

11.34 The Plan may indicate the envisaged changes in the existing policy framework and any new policy initiatives that may have been decided upon. It may also indicate the contemplated institutional change and the proposed new institution-building including improvements in the planning organisation and procedures.

The Annual Plan :

11.35 The proper role of the Annul Plan is to serve as an operational instrument for the Five-Year Plan including any adjustments that the latter might require in the light of new developments. It must, therefore, have the same scope and content as the Five-Year Plan. At present the Annual Plan almost exclusively concerns the part of economy subject to mandatory planning though it also gives some projections for the over-all economy. This is particularly true of the Annul Plans of the States. If the Annual Plan is to serve as an efficient operational device for the Five-Year Plan, it must be cast in the same mould except that in this case the time span covered is one year. The content of the Annual Plan and the procedure for its preparation call for a major everhaul.

(7) The Levels of Planning

11.36 Corresponding to the two levels of Government, there are two basic levels of planning, the Centre and the States. The State level includes planning at the local level.

The Central Sector Plan :

11.37 The Central Sector Plan comprises development activities of the Union Ministries and the Central departmental and non-departmental enterprises. It also includes Centre's outlay on Central and Centrally Sponsered Plan Schemes, mostly Central Assistance to States for implementation of these Schemes. It has been argued elsewhere that these Schemes should be cut down to the minimum. Only such shcemes may be retained as are indispensable for the realisation of crucial national objectives. All other schemes may be either wound up or transferred to the jurisdiction of the State Plans together with equivalent transfer of resources to the States. Strictly speaking the development activities of the Union

Territories are a part of the Central Sector Plan, though in this regard the Union Territories with Legislature are more akin to States.

11.38 The public sector out ly under the Central Sector Plan includes both the Budgetary outlay on Plan projects and programmes as well as the outlay financed by extra-Budgetary resources of the Central enterprises. The extra Budgetary resources include : (i) the Central enterprises, internal resources, that is, the amount available for the Plan from their depreciation provision and retained profits and (ii) the enterprises outer extra-Budgetary resources such as equity investment of parties other than the Central Government, borrowings from Indian Financial institutions, commercial borrowings from abroad, deferred payment credits from Indian companies and public deposits accepted.

11.39 The Central Assistance for State Plans is not included in the Central Sector Plan outlay as the outlay financed by such assistance is included in the State Plan outlay. To treat Central Assistance also as a component of the Central Government Plan would be double counting. Such Assistance is therefore treated as a non-Plan expenditure of the Centre.

The State Plans :

11.40 A State Plan comprises the development activities of the State Government Departments (including the departmental enterprises), the State's non-departmental enterprises, principally the State Electricity Board (SEB) and the State Road Transport undertakings (SRTU) and the local bodies. The State Plan includes the budgetary outlay on plan projects and programmes as well as the outlay financed by extra-Budgetary resources of State enterprises and local bodies. Since the Central Assistance for State Plans passes through the State Budget, it becomes a part of the State's total resources for the Plan. As in the Central Sector Plan, the extra-Budgetary resources of enterprises for the Plan include their internal resources and other extra-Budgetary resources. The latter include mainly their market borrowings (that is, the State enterprises, mostly the SEB's share in the States' quota of market borrowing), borrowings from term financing institutions (LIC, REC, IDBI, etc.) and, in the case of SEB, consumers' deposits. The Seventh Plan and the Annual Plan 1985-86 have taken some credit, even if in significant amounts, for the extra-Budgetary resources of State enterprises other than SEBs and SRTUs, but it is doubtful if many State Governments do the same. They take into account only the market borrowings passed on to these enterprises (if any) and their term loans from financial institutions. Development financed by any other extra-Budgetary resources very probably does not always get included in the State Plan outlay.

11.41 The State Government Assistance to local bodies for development purposes is included in the State Plan outlay. Development outlay of local bodies financed by any market borrowing allowed to them out of the State quota or by borrowing from financial institutions such as LIC is also included. Development activity financed by the local bodies' internal resources or any other extra-Budgetary resources generally remains excluded from the States Plan outlay. Presumably, it is considered that the local bodies are unlikely to have any significant resources for development outside of the State Government assistance, their borrowings from the market and the term loans from financial institutions.

District and Lower Level Planning :

11.42 There is as yet little genuine district or lower level planning possibly in any State. The position in Punjab is about the same as elsewhere in the country. There are District Planning Boards but no District Plans. Like-wise there are Block Planning Committees but no Block Plans. The District Planning Board (DPB) has the Deputy Commissioner as the Chairman and the District Statistical Officer as the Member-Secretary. The Block Planning Committee (BPC) is headed by the Sub-Divisional Magistrate and has the Block Development Officer as its Member-Secretary. The DPBs and BPCs undertake no planning activity. They are non-planning planners, an institution by no means confined to Punjab or even the States. Their activity is limited to some sort of review and monitoring of the States ;Plan's divisible schemes to the extent these are located in the particular District or Block. For this purpose, district-wise distribution of divisible State Plan schemes is prepared by the State Planning Department and made available to the districts.

11.43 In spite of interest shown by the Planning Commission in Planning at District and lower levels, little progress has been made in this direction because the essential prerequisites of such planning do not exist. These are :

(i) There must be a level of Government with considerable genuine autonomy with regard to its developmnt activities. These development activities will constitute the jurisdiction of that level of planning.

(ii) This level of Government must have adequate financial resources to finance its development activities.

(iii) There must be a genuine desire by this level of Government to plan its development activities.

(iv) There must be an appropriate organisation to plan and implement these development activities.

11.14 In other words, district and lower level planning is linked with democratic decentralisation and belief in planning in the States. Neither of these conditions is reasonably met at present. No wonder then that planning below the State level has not yet made a tangible beginning.

(8) The Planning Organisation

11.45 The Planning Organisation consists of a multi-level structure. At the apex of this structure is National Development Council. At the Centre, there is the Planning Commission. It serves as the secretariat of the NDC and has the key role in the entire planning structure. At the State level there are the State Planning Departments and the State Planning Boards/Commissions. At the bottom of the structure, at the district and the lower levels, there are Planning Boards, Committees and the like.

The National Development Council

11.46 The National Development Council (NDC) is a non-statutory body set up by the Centre by an executive decision. Its most important members include the Prime Minister (who is the Chairman), the Deputy Chairman and the Members of the Planning Commission, the Union Cabinet Ministers and the State Chief Ministers. The Planning Commission serves as the Secretariat and prepares its agenda papers.

11.47 The NDC has more of a symbolic than a substantive role in the planning process. It meets very frequently, not even once in some years. The agenda papers usually reach the State Capitals only a few days before the meeting when there is hardly time enough to glance through, much less properly examine these papers. Most of the two days, usually one and a half day, session is taken up by the inaugural speeches and closing remarks of the Prime Minister and the Deputy Chairman of the Planning Commission and the written and printed speeches of the State Chief Ministers, whatever the items on the Agendas, a good portion of a Chief Minister's speech is generally concerned with articulating the State's grievances and demands and has a familiaring. There is usually no discussion worth the name. Though the NDC is supposed to be the final authority for approval of the Plans, particularly the Five-Year Plans, in practice it has no choice but to approve the Document prepared by the Planning Commission. A plan is by its very nature a highly structured development programme. A major change in any part of it might disturb the entire structure. The NDC is usually convened for approval of the Plan when its entire structure has been given a final shape. At this stage, it is not possible for the N.D.C. to suggest basic changes in the Plan. Furthermore, the Plan document is put up to the N.D.C. only after the Union Cabinet has approved of it. The whole weight of the Central Government is therefore, thrown in its support. Even among the Chief Ministers so far the majority has always been from the ruling party at the Centre. The latter support the document even if they make a few critical comments on it. In the event approval by the N.D.C. is a pure formality and is a foregone conclusion. This approval is of great political importance for the Centre. It creates the general impression of a national consensus in support of a Plan which is essentially a handiwork of the Planning Commission and Centre in general.

11.48 The N.D.C. is in a better position to intervene in Plan preparation when the document spelling out the Approach to the Five-Year Plan under preparation is put up for its approval. This document gives the proposed broad directions and major dimensions of development and the related policy framework, and not the finished full structure of the Plan. Changes are certainly possible at this stage but the composition and procedure of the N.D.C. rules out any significant ones even on this occasion. The NDC meeting convened for the purpose proceeds much the same way as when called for approval of the fully worked out plan. This time too the Chief Ministers read printed speeches mostly unrelated to the Approach document. Once again the support of the Central Government and the Chief Ministers belonging to the ruling party the Centre ensures the approval of the document. Even if several Chief Ministers, particularly these belonging to opposition parties at the Centre, have strong reservations on several aspects of the Approach to the Plan, the NDC meeting, by its approval of the Document, puts the Planning Commission and the Centre in a position to claim national consensus in its favour. Since the press is excluded from the NDC, it just puts out the version of the proceedings given to it by the Planning Commission. In this version any criticism of the document at the meeting seldom finds adequate coverage.

11.49 The NDC, though treated as the apex organisation of the Planning structure, plays no effective role in the Planning process. Its principal role is to enable the Planning Commission and the Centre to claim national acceptance and support for their dominance of the country's development activities including those that, under the constitution, are within the jurisdiction of the State. Dominance of the Planning process has been a major instrument in the hands of the Centre to make heavy in-roads into the State autonomy.

The Planning Commission

11.50 The Planning Commission is a non-statutory body created by the Central Government by an executive decision. It exists as an institution solely at the pleasure of the Union Government which determines its composition, functions and the staffing pattern. The States have no say whatsoever in the matter. The membership of the Planning Commission includes the Prime Minister (who is the Chairman of the Commission), full-time Deputy Chairman and other Members, and several Union Ministers (who invariably include the Finance Minister) as part-time members. The Union Planning Minister, if he is of Cabinet rank, is appointed the Deputy Chairman. If he is a State Minister, he has hardly any role other than replying to Parliament questions. The normal tenure of the full-time Members is 5-years but it can be terminated at any time at the pleasure of the Union Cabinet. This is in keeping with the essentially political status of Members. The Deputy Chairman has the status of a Union Cabinet Minister while the other full-time members have the status of a Union Minister of State. The Deputy Chairman is the Executive head of the Planning Commission. The Prime Minister presides over the meetings of the Planning Commission only on a few occasions (usually not more than 2 or 3 in a year) when a "full" meeting of the Commission is held and the Minister Members are also present. Other meetings are presided over by the Deputy Chairman. There is no fixed number of full-time or part-time Members. Nor are any qualifications laid for full-time Members. In the past, the full-time membership has included distinguished experts, not so distinguished politicians, and former bureaucrats and technocrats. The senior staff of the Commission is drawn from the All-India and Central Services (the Indian Administrative Service, the Indian Economic Service, the

Indian Statistical Service etc.) or consists of non-cadre professional and technical personnel. Occasionally an influential free lancer is also provided a cosy berth. The Administrators appointed to senior planning posts usually look upon the Planning Commission as a waiting parlour for worth-while assignments elsewhere. The turn-over among them is fairly high. This further affects the planning efficiency. There is as high an incidence of well-paid idleness and uncoordinated wasted effort at all levels in the Planning Commission as in other Government Departments.

11.51 The Union Ministries have become increasingly autonomous of the Planning Commission. The role of the Planning Commission vis-a-vis the Union Ministries has been reduced over time to recording rather than making development decisions and palming off these as the Central Sector Plan presumably to the sheer delight at the latter. A Union Ministry usually comes to the Planning Commission for consultation and approval only when it needs the latter's support against the Finance or some other Ministry or seeks to ensure approval of its proposal by the Cabinet. Otherwise it resents any interference by the Planning Commission. With respect to the preparation of State Plans the Planning Commission remains an effective control and supervisory agency of the Central Government. It is this role which creates a lot of work for the Planning Commission staff and makes this institution indispensable for the Central Government.

11.52 Much of the technical work of the Planning Commission is held back from the public gaze under the very convenient label of "confidential" or "secret'. 'This label, as the veil in real life, is very often intended to hide ugliness and shoddiness and not beauty and excellence. This results in the improvements in planning concepts and techniques becoming all the slower. After all, it took the Planning Commission 20 years to change over from net to gross capital formation in its investment planning.

The State Planning Boards:

11.53 At the State level whatever planning is being undertaken is by the Planning and other Departments. The State Planning Boards exist in name rather than as an effective operational agency. Their "neither among the living nor among the dead" existence is often attributed by the State Bureaucracies to the fact that the Planning Commission completely dominates the Planning process in the States and leaves little initiative to the Planning Boards. This, indeed, is one factor for the State Planning Boards being more of a fiction than a living reality. But surely this is far from being the whole truth. Whatever planning initiative still remains with the States is equally unavailable to the Planning Boards. There are also other weighty factors responsible for the Boards' present state of insignificance and inactivity with respect to the Planning process at the State level. These are mentioned below.

(1) The Finance Department monopolises all financial planning at the State level. It keeps even the Planning Department completely out of the picture. All discussions with the Planning Commission about the State's resources for the Plan are the responsibility of the Finance Department. The State's estimates of resources for these discussions are prepared exclusively by the Finance Department with no participation by, or association of, even the Planning Department. At the discussions, the Planning Board is represented generally by a middly level officer with more or less an observer status. He is in no position to contribute to the discussion. The Planning Board has no knowledge, of what is being discussed and what has been the outcome till, and if, the minutes of these discussions are shown to them. Any discussions with the financial institutions are also the exclusive responsibility of the Finance Department. Nor is the Planning Board, or even the Planning Department, kept informed of any other developments with regard to the financial aspect of the State Plans. It is not surprising then that, for instance in Punjab, the State's Annual Plan just makes no reference to the financial resources for the Plan. This information is available only in a very skeleton form in a Budget Document. A very important aspect of State Planning is thus altogether excluded from the purview of the Planning Board, or even of the Planning Department.

(2) The Planning Board is more a Committee of Ministers and Secretaries than a specialised planning agency. The Chief Minister is rightly the Chairman of the Board, but it also usually includes some of the following: the Finance Minister, the Planning Minister, some other Ministers, the Chief Secretary, the Development Commissioner, the Finance Secretary, the Planning Secretary and even some other Secretaries. Thus, unlike the Planning Commission, the Board membership includes several serving administrators. Some-times a defeated, ousted or potentially inconvenient politician is also accommodated as Deputy/Vice-Chairman of the Board. There are generally also a few non-official part-time-members. There is no accepted tradition of having any full-time members with a professional background. In Punjab, the Akali Government has for the first time provided for a full-time Vice-Chairman and three full-time members of the Board. It is too early yet to assess the results of this innovation. The involvement of the part-time members in the Planning process is minimum more or less limited to attending the few meetings of the Board held in a year and of course receiving the sitting fee for this.

(3) The Departments, for obvious reasons, like to communicate with the Planning Department and not with the Planning Board. The so called bilateral discussions with the Department on their Plan proposals are taken by the Planning Department and not by the Board even when it has full-time members. It is the Planning Department which is invited to inter-Departmental meetings even on important development matters and no any representative of the Planning Board. It is not unusual for the Planning Secretary to attend several such meetings every day on a variety of development issues without any reference to the Members of the Board. The role of the Board staff is limited to preparing briefs for the Planning Secretary for these meetings, if and when required to do so (which is not often).

(4) The Planning Commission communicates with the Planning Department and not with the Planning Board. It gives financial assistance to the States for establishing and strengthening the Planning Boards but itself prefers not to deal with them. It is the Planning Department which is invited for Working Group discussions for the States' Plan proposals. It is the Department which organises and participates in these discussions without any reference to the Board. The Planning Board remains all this while isolated from the Planning process.

(5) The Administrators who know the real (as distinguished from the formal) status of non-official members of the Board, whether part-time or full-time, just cold shoulder them and resent any comments by them as unnecessary interference with their work and attach little weight to these.

(6) During Plan preparation, the Board is usually brought into the picture when the work on the State Plan has been completed. As a bit of a force, the Board is asked to approve a Plan which has been printed already and is ready for issue, and no changes are possible to take care of any views expressed by the Members at the meeting. In the event, approval by the Board is a pure ritual.

(7) An oft adopted stratagem to exclude the Board from any substantive role in planning is to entrust it with the task of working out a long-term development perspective for the State. Not many non-official members of the Board are taken in by this very transparent move.

(8) Generally the Ministers do not take kindly to the Planning Board. The Planning culture has not yet percolated adequately to the State level. Towards building up their own image, the Ministers tend to hold out all sorts of promises to the public, sometimes even over-stepping the bound of Plan policies and provisions. It is natural for them to look upon all planning agencies as an unnecessary encumbrance. They cannot touch the Planning Department as it is now a part of the normal administrative establishment. The Planning Board is not so invulnerable. It has to bear the brunt of the Ministers' ire.

11.54 Since 1972-73, there has been a Centrally Sponsored Scheme for strengthening the State Planning machinery. Under this scheme, two-thirds of the expenditure incurred by the States for strengthening their Planning Boards and Planning Departments is reimbursed by the Centre within the approved ceiling. At the end of a Five-Year Plan, the expenditure on the maintenance of the additional staff appointed under the Scheme becomes a committed liability of the State. Supposedly encouraged by this scheme, the State Planning Boards/Commissions have been set up as the "apex planning bodies" (sic) in all the States except Sikkim. Their true status and effectiveness has been brought out above. One reason for this is that the Centre's guidelines on the subject are inadequate, inappropriate and betray blissful ignorance of the constraints on planning at the State and lower levels. The Centre will be well advised to leave the strengthening of the Planning machinery to the States themselves according to their needs and understanding. After all its contribution over the five years of the Sixth Plan has been only Rs. 2.68 crores for all the 22 States* and after the end of the Plan period, the entire committed expenditure arising from this assistance has to be borne in any case by the State Government. This is not a task beyond the State's means if they attach any importance to it.

11.55 The fact that the State Planning Boards are not in most cases a specialised planning agency and are largely ineffective has had several undesirable consequences for the State level planning. These are mentioned below :

(i) The State Plan tends to be a mere aggregation of public sector projects and programmes and not an organic development concept covering the entire State economy, a part of it by mandatory planning and the rest of it by judicious indicative planning.

(ii) The financial planning remains but an adjunct of normal Budget making process. It excludes any financial thinking or arrangements with respect to that part of the State economy which ought to be covered by indicative planning.

(iii) The inter-Departmental and inter-project allocation of funds often tends to be related more to the relative seniortiy and status of the Department Secretaries, the political weight of the Ministers and the state of relations of various Departments with the Planning Department rather than to the intrinsic merit of projects and programmes put forth by the different Departments in relation to the States' development priorities.

(iv) When requests are made by Departments for reappropriation of funds or for a additional funds for their projects and programmes, the Finance Department does not always insist on prior clearance of the Departmental proposal by the Planning agencies. The final inter-Departmental and inter-project allocation of these funds may thus turn out to be substantially different from that originally agreed to, and the Planning agency may get to know of these changes only *ex-post*.

(v) The Plan concentrates on projects and programmes that is, the physical aspect of public sector development. Little attention is paid by the Planning process towards evolving an adequate, appropriate, realistic and internally consistent development policy framework. Policy decisions are taken by the State Government throughout the Plan period more or less on *ad-hoc* basis.

(vi) The conceptual framework and methodology of planning at the State level shows little innovation and improvement over the successive plan periods.

(vii) The data base for proper State level planning, monitoring and evaluation remains weak because the planning agencies make no demand for more comprehensive and

* Seventh five Year Plan 1985-90, Vol. II, Para 20.15, p. 405.

uptodate data. Both the Planning and the statistical organisations generally move in the traditional rut from year to year and from plan to plan.

(viii) The technical and professional personnel working in various State Departments, public and private enterprises, and the academic institutions are denied any opportunities to contribute to improvements in the Planning and implementation process. In consequences, Planning at the State level remains a largely bureaucratic exercise.

(9) **Monitoring and Evaluation**

11.56 Monitoring is essentially an aspect of implementation. Every implementation agency must have an adequate monitoring organisation and procedures. The flow of informations must be timely and in a form as to enable speedy corrective action for any lapses in implementation. The fact that the corrective action is seldom prompt and effective with the result that few public sector programmes are implemented in time, within the original cost estimates and with the expected results suggests that the Central and State implementation agencies do not generally have efficient and effective monitoring arrangements. The fact that the public sector projects and programmes are often sanctioned inadequate funds for uninterrupted implementation, or face supply bottlenecks with respect to their requirements of men and materials, is attributable to, *inter alia*, the very many procedural constraints under which the public sector agencies operate, in any case rules out prompt remedial action. This greatly reduces the value of efficient monitoring. There is an imperative need to avoid dispersal of resources over too many projects and programmes and to streamline procedures if effective monitoring is to make its due contribution to implementation efficiency.

11.57 Monitoring is of importance for planning agencies for two reasons. Timely information on development of any imbalances in the economy on account of delayed implementation of some Plan projects and programmes facilities corrective or countervailing measures to ensure uninterrupted growth and operation of the economy. Secondly, these agencies would need to have the latest anticipation of the base year position in different sectors towards preparation of the next plan. They usually receive the information on progress of the plan projects and programmes form the implementation agencies but sometimes see things for themselves with the cooperation of these agencies.

11.58 *Ex-ante* evaluation, commonly termed appraisal of projects and programmes for inclusion in the plan is an aspect of the planning process, since peculiar appraisal problems arise in each sector, this function should be undertaken by the Division dealing with the particular sector. It is impossible for any so called project Appraisal Division to do this work for the totality of projects. The various subject Divisions may be provided with training in basic appraisal criteria and techniques by the Economic Division.

11.59 The utility of *ex-ante* evaluation depends on how far projects and programmes are approved on objective criteria. If political and other extra-economic considerations or some rules of the thumb play the dominant part in the selection, the utility of objective appraisal is correspondingly reduced. This is one major reason why project appraisal remains at a fairly under-developed state in the Planning agencies. Another major reasons for this is that the pure Administrators who often head several sectoral Divisions are not conversant with scientific appraisal criteria and techniques.

11.60 *Ex-post* evaluation is important for drawing proper lessons for the future. The subject Division usually have no inclination for this. There is a specialised evaluation organisation (the Programme Evaluation Organisation or PEO) at the Centre. There are also evaluation organisations in the State (usually a part of the Planning Department or the Statistical Organisation). Their effectiveness is very limited. Firstly, the organisations generally evaluate only programmes in the agricultural, rural development and social services sectors but no industrial and other non-agricultural projects. Secondly, these organisations are usually/ wary of trading on the toes of the implementation Departments. Their evaluation reports are mostly prosaic, vague and a superficial affairs, lacking in any depth or incisiveness. The reports are normally available after a long delay and by then might have lost whatever utility they could have possessed. There is inadequate co-ordination and co-operation between the State evaluation organisations and the P.E.O. staff operating in the State.

11.61 There is some chance of securing more adequate, uninhibited and timely evaluation reports on selected Plan projects and programmes if this task is framed out to one of the reputable research institutions that have come up. Effective evaluation by an organisation which is an adjunct of the Planning organisation does not seem to be feasible. This is particularly so when efficient implementation has been hampered by faulty planning of the particular project or programme. Proper evaluation must bring out whether it is the un-implementability or poor implementation that has been the main factor for obliging the country to go without the results which it could legitimately except from the expenditure incurred.

(10) **Reorganisation of the Planning Process**

11.62 The planning process needs to be reorganised to ensure that the States have due autonomy within their jurisdiction to determine their development activities and policy and that they have the opportunity to contribute to determination of national priorities and basic directions of development on an equal footing with the Centre. An essential pre-condition for this is that the States' present serious financial dependence on the Centre is brought to an end and they are put in a position to raise sufficient resources of their own to finance their development activities. The Central Assistance for State Plans may then have only marginal significance except for some financially very weak States. The suggestions made in chapter 10 were

aimed at fulfilling this pre-condition. The implementation of these suggestions will make the reorganisation of the planning process towards a greater balance between the Centre and States a feasible proposition. This section makes suggestions for such a reorganisation.

Reorganisation of the National Development Council

11.63 The reorganisation of the National Development Council (NDC) may aim at making it an effective, instead of a mere symbolic, apex organisation of the planning process. It may be entrusted with the following functions:

(i) To approve the guidelines for preparation of the Ten Year Development Perspective, the Five Year Plan and the Annual Plan.

(ii) To approve the Approach to the Five Year Plan.

(iii) To approve the Draft/Final Documents of the Ten Year Development Perspective, the Five Year Plan and the Annual Plan.

(iv) To approve the quantum and distribution of Central Assistance for State Plans.

11.64 A new organisation, which may be called the National Development Organisation (NDO) may be set up to service the NDC. The NDO may be staffed with high level planning and development experts in different subjects with supporting research and ministerial staff. It may be under the administrative control of a committee appointed by the NDC. The cost of maintaining the NDC may be apportioned among the Centre and the States in an agreed manner. The NDO may be made responsible for preparing the overall documents with respect to the national economy of the Ten Year Development Perspective, the Five Year Plan and the Annual Plan for approval by the NDC. In doing this, it will take into account the Plan prepared by the Planning Commission for the Central sector and by the State Planning Boards for their respective State sectors as well as any other material relevant to the subject in hand prepared and forwarded by these organisations. Any departures from the approved guidelines noticed by the NDO in the Sectoral Plans will be referred back to these organisations with its comments. While the Planning Organisation concerned will give due consideration to these comments, its action on these will be entirely its own. The NDC may set up a Standing Committee to thrash out, to the extent possible, an agreed view on all over-all Plan documents before the NDC meets to consider and approve these. The Standing Committee or the NDO may report any remaining disagreements about the Document to the NDC so that the full weight of the assembled political leadership of the country is brought to bear on resolution of these differences.

11.65 The composition and functioning of the NDC may be reorganised to suit its new, greatly enhanced, role in the Planning process. The membership of the Council may consist of the Prime Minister (Chairman) and Finance Minister, not more than 8 other Union Cabinet Ministers in charge of economic ministries and all the Chief Ministers. The Chairman of the NDO may be the Member-Secretary of the NDC. If new States are created, for every 2 new States, the NDC may include one additional Union Minister.

11.66 The NDC may meet more often, generally once every quarter. The meeting may normally cover two full days. Special meetings may be held as and when the need arises. The Chairman may regulate the discussion so as to focus it on the issues under discussion. The Council may preferably seek to arrive at a genuine consensus on the matters on the agenda. Whenever this is not possible the Council may take a decision by a two-thirds majority.

Reorganisation of the Planning Commission

11.67 The responsibility of the Planning Commission may be limited to the Central Sector of the economy. For efficient discharge of its new role as an essentially specialised planning agency for the Central sector, the Planning Commission may need to be re-organised on the following lines:

1. Apart from the Prime Minister (the Chairman of the Commission) and the Finance Minister, there must be no other ex-officio member of the Commission. The present position with regard to the role and status of the Planning Minister may remain unchanged.

2. The Commission may have fixed five full-time Members. Their respective portfolios may be (i) economic and financial aspects of planning; (ii) agriculture and rural development (iii) industry; (iv) infrastructural sectors; and social services.

Some adjustment in portfolios may be in order depending on the respective specialisation of the Members. The Deputy Chairman, in his capacity as executive head of the Commission, may have an essentially coordinating role. The members may be specialists in their respective areas but not narrow specialists. They may have an adequate public stature, a broad vision and a firm commitment to the accepted development objectives. They may not normally be disturbed before the expiry of their five-year term. The senior positions in the technical Divisions may be normally manned by specialists, both cadre and non-cadre persons. The Commission will no longer perform a coordinating role with regard to State Sector Plans. There may no longer be any Resources or Working Group discussions with the States. The Planning Commission Divisions will now have more time for improvements in their technical work. Each subject Division may undertake all aspects of the Planning work relating to that sector including project and programme appraisal, monitoring, ex-post evaluation and policy formulation There may be need to be no special Divisions on these aspects covering the whole economy.

State Planning Boards:

11.68 All aspects of planning with respect to the State sector may be the responsibility of the State Planning Boards. Towards upgrading the

Boards to a worthy agency for State level planning, these may be broadly patterned after the Planning Commission Specially (i) The Boards may comprise the Chief Minister (as Chairman), Planning Boards full-time Deputy Chairman and three full-time Members. These members (including the Deputy Chairman) may each deal with one of the following subjects depending on their specialisation, experience and interest; (1) economic and financial aspects of the State Plan; (2) agriculture and rural development; (3) industry, power and transport; and (4) social services. The Finance Minister and the Planning Minister may be ex-officio Members of the Board. No serving official of the State Government may be a Members of the Board. The Planning Secretary may be the Secretary (but not Member-Secretary) of the Board. The full-time Members may be specialists in their respective areas but with a broad vision and a firm commitment to the development objectives. They may normally have a five year term which may not be cut short except under exceptional circumstances. The Deputy Chairman may have the status of a Cabinet Minister and the other full-time members that of Minister of State.

(ii) The technical staff of the Planning Board may be organised into four wings corresponding to the subjects assigned to the four full-time Members. Each wing may comprise several independent Divisions/sections. There may be an independent Plan Coordination Division.

(iii) The Planning Boards may be adequately involved in the financial aspects of planning at the State level.

(iv) At the meetings of the State Cabinet on development matters the Deputy Chairman of the member concerned may be present as a special invitee. At inter-Departmental meetings on development matters, the Planning Board may be represented at the appropriate level.

(v) The Planning Board may communicate with the National Development Organisation, the Planning Commission and the other State Planning Boards.

11.69 The scope of the State Plan may be enlarged to cover the entire State economy comprising a mandatory and an indicative part.

11.70 The State Planning Board may determine the size of the State Plans. Its estimate of own resources may be taken as final. The entitlement to Central Assistance for the State Plan may be determined by the NDO by applying the criteria approved by the NDC. The sum of the two will give the size of the State Plan. Any overstatement by the State of its own resources will be penalised by underfulfilment of the State Plan as it is no longer open to it to resort to deficit financing to make up the deficiency in resources.

11.71 The State Planning Board will itself decide on the allocation of State Plan outlay for different sectors, subsectors and individual projects and programmes. The Board will, however, pay due regard to any departures from the Guidelines approved by the NDC which may be pointed out to it by the NDO, but the final decision in this matter will be with the Board.

11.72 The State Plan prepared by the Planning Board must be put to the State Cabinet for approval. It will become an authentic document only on receipt of such approval.

District Level Planning Organisation

11.73 District Plans may cover, to begin with, the development activities of the Panchayati Raj institutions. In other words, planning at the District level may cover the development activities pertaining to the subjects within the purview of the Zila Parishad. Likewise, planning at the Block or village level may cover the development activities pertaining to the subjects within the purview of the Block Samiti and the Panchayat, respectively.

11.74 The Panchayati Raj institutions at all levels may be enabled to have adequate own resources for their respective Plans. Financial decentralisation is an essential counterpart of decentralisation of Planning. There shall also need to be a substantial State Government assistance to the Zila Parishads for their District Plans. This assistance will be a legitimate non-Plan revenue expenditure of the State Government. Likewise there may be a substantial Zila Parishad assistance for the Block Plans, and Block assistance for Panchayat Plans. Such assistance will be a non-Plan expenditure of the Zila Parishad and the Block Samiti.

11.75 The District Plan will be at this stage an aggregate of the Zila Parishad, Block Samiti and Panchayat Plans. At an appropriate stage, the scope of the District Plan may be expanded to include the development Plans of the Municipal Corporation and Committees in the District and the divisible schemes of the State Departments located in the District. At a still later stage, the scope of the District Plan may be expanded still further to include the development activities of the private sector. Thus the District Plan may grow in scope, step by step, into a comprehensive programme covering the development activities in the District. There will have to be a corresponding adjustment of the Planning organisation at the District level.

11.76 At the first stage, the District Planning Board may comprise the following: (i) Chairman Zila Parishad, who may be the Chairman of the Board; (ii) three full-time members, one of whom may be designated as the Vice-Chairman, of the status of the District Statistical Officer (the Vice-Chairman may be given a higher status); and (iii) the District Statistical Officer. The Block Planning Committee may comprise: (i) the Chairman Block Samiti as the Chairman of the Committee; (ii) Block Development Officer; and (iii) One full-time member with specialisation in agriculture but with wider interests. The Panchayat Planning Committee may comprise the Chairman of the Panchayat and two part-time members elected by the Panchayat.

11.77 The changes in the Planning organisation at different levels suggested above are meant to promote cooperative federalism and democratic

decentralisation with a view to anchoring national unity and integrity on the firm and unshakeable commitment of all the Indian peoples to it, and to create more favourable conditions for the realisation of the country's development goals which have so far eluded it. Their appeal and success will naturally depend upon how genuine, firm and widespread is the acceptance of the democratic, as opposed to the authoritarian, approach to national unity, integrity and development.

Summary

In order to facilitate quick reference to the various issues discussed in this draft Memorandum, the contents of the various Chapters have been very briefly mentioned below together with reference to the relevant paragraph(s).

States as the Homelands of Distinct Peoples

(Ch. 1).

In the second half of the 19th Century, alongside expanding patriotic unity of the country's diverse peoples, there was, on account of several factors, a growing sense of distinct identity and an urge for territorial consolidation among people sharing the common language.

(Paragraph 1.1 to 1.2).

The sense of distinct identity however showed uneven progress among different linguistic groups because of diverse factors.

(Para 1.3).

The growth of the sense of distinct identity was accelerated in the post-independence period by several new or more favourable factors. This has led to the emergence of a multi-national society in India.

(Para 1.5).

At the same time powerful social forces have emerged which are working for a highly centralised *de facto* unitary State under their own domination. They are increasingly tending to base themselves on the hegemonistic forces of Hindu-Hindi-Hind Chauvinism.

(Para 1.6).

Under the pressure of the linguistic and ethnic groups who are increasingly conscious of their distinct identity, many States have been reorganised on a linguistic basis. In several cases, the grudging, half-hearted and unprincipled application of the linguistic criterion created serious problem areas in the country, several of which still pose serious problems.

(Para 1.7).

With the linguistic reorganisation of States, these have become the homelands of various linguistic or ethnic groups. These groups are in fact growing into distinct nationalities.

(Para 1.8).

The emergence of India as a multi-national society does not by itself pose any threat to the country's unity and integrity.

A multi-national State is a very feasible proposition. There are several multi-national States in the World. A genuinely federal state structure provides an effective device to base the unity and integrity of a multi-national State on the solid foundation of the peoples' will for it.

(Para 1.9).

The Constitution in Retrospect and Prospect.

(Ch. 2).

The concept of a federal state structure came to be discussed in the early years of this century in the context of reconciling the increasingly assertive Muslim minority to the goal of a united free India:

(Para 2.1).

(1) *Evolution of the Federal Concept*

Muslim apprehensions about the concept of a united and highly centralised free India.

(Para 2.2).

The Lucknow Pact 1916 and the subsequent negotiations between the Congress and the Muslim League were based on the federal concept.

(Para 2.3).

The federal concept appeared an obvious approach to bring the Princely States into association with the rest of India. The federal concept was endorsed at the Round Table Conference (1930-32) and adopted by the Government of India Act, 1935.

(Para 2.4).

The Federation envisaged in the Act of 1935 could not be implemented due to Second World War (1939-45).

(Para 2.5).

The Cabinet Mission Plan on the basis of which the Constituent Assembly was set up in 1946, accepted the federal concept with residuary powers to the constituent units.

(Para 2.6).

Mr. Nehru Introduced the objective Resolution in the Constituent Assembly in December, 1945 envisaging a union of India with residuary powers to the autonomous constituent units.

(Para 2.7).

A Basic change in situation after the acceptance of Partition. A swing in the Constituent Assembly in favour of a powerful union and a strong Centre. The Constitution as framed provided for a basic federal structure but with important unitary features.

(Paras 2.8 to 2.10).

The antagonistic developments in the period since Independence: on the one hand several States were reorganised on linguistic basis and became homelands of distinct peoples; on the other hand, the original unitary features are being accentuated by a Centralisation drive by the Centre. Hence the Centre-State problems.

(Para 2.11).

(2) *Character of the Constitution*

Is the Constitution at all federal?

(Para 2.12).

Essential Characteristics of a federal Constitution.

(Para 2.13).

It is a Federation with a strong Centre. It has a basic federal structure but with several unitary features including:

(i) Parliament's power to alter the name, territory and boundary of States;

(ii) legislative and administrative constraints on the States' autonomy; and

(iii) an inherent Centre-State financial imbalance.

(Paras 2.14 to 2.19).

Comments of Dr. Ambedkar and some Honourable Judges of the Supreme Court on the character of the Constitution.

(Para 2.20).

Conclusion: It is essentially a federal Constitution but has several features more appropriate to a unitary Constitution.

(Paras 2.21 to 2.22).

At present the main threat to India's unity and integrity is that the relentless Centralisation drive may alienate many nationalities and ethnic groups and sap their will for a United India. To set at rest all doubts about the character of the Constitution, the expression 'FEDERAL' may be added after, the expression "DEMOCRATIC" in the Preamble.

(Para 2.23).

(3) *Case for Greater State Autonomy*

This case is based not on any "traditional" notion of federalism but on the fact that only a genuinely federal state structure can provide an enduring basis for the country's unity and integrity in a society which has increasingly acquired a multi-national profile.

(Para 2.24).

The linguistic reorganisation of States has been an act of great foresight. This process must be taken to a principled and logical conclusion.

(Paras 2.25 to 2.26).

The only realistic way to contain a multinational society within a single state is to have a genuinely federal form of Government. Other consideration also call for this approach.

(Paras 2.27 to 2.28).

The claim that the Centre's domination of the Indian polity gives it a more progressive, patriotic and enlightened orientation is not supported by facts.

(Para 2.29).

Towards ensuring greater autonomy to States comprehensive proposals have been made in the Memorandum. Several of these proposals shall require Constitutional amendments.

(Paras 2.30 to 2.31).

(4) *Safeguards for the Country's Unity and Integrity.*

No two opinions about safeguarding the country's unity and integrity. The Constitution contains many provisions for the purpose. Some of these are not necessary or appropriate.

(Paras 2.32 to 2.33).

Need for economic and political measures to reinforce the Constitutional provisions for safeguarding the country's unity and integrity.

(Paras 2.34 to 2.35).

The federal concept is being viewed in a different role than what the British envisaged for it. Federalism is now being viewed as a conceptual frame to accommodate the legitimate claims of new forms of diversity that have emerged and thus to consolidate the unity and integrity of the country by basing it on the solid foundation of the united peoples' will for it.

(Paras 2.36 to 2.38).

Legislative Lists

(Ch. 3).

Changes in the Legislative Lists have been suggested with the following motivation:

(i) To restore to the States the subjects that have been unreasonably shifted out of List II (State List) to other Lists;

(ii) To minimise the scope for expanding the Centre's jurisdiction at the expense of the States by declaring a matter to be of national importance, or on grounds of public interest; and

(iii) To transfer such matters to the States as may best be handled by the States.

Changes in List I, II and III are suggested in Annexures I, II and III to Chapter 3. The rationale of each change is given in the write-up on the particular List.

(1) *Changes in List I*

Changes in List I have been suggested for the purpose mentioned below against the concerned Entry. A reference to the relevant write-up which gives the rationale for the change is also given:

(i) To provide that the Centre's armed, paramilitary and police forces shall be deployed in a State only at request of, or with the concurrence of, this State.

(Entry 2-A, Para 3.2).

(ii) To limit Centre's control on shipping and navigation in States' internal waterways to only inter-State rivers.

(Entry 24, Para 3.3).

(iii) To substitute "inland waterways" by "inter-State river" in Entry 30.

(Para 3.4).

(iv) To shift telephones, broadcasting and television to List III (Concurrent List).

(Entry 31, Para 3.5).

(v) To shift lotteries organised by the States to List II (State List).

(Entry 40, Para 3.6).

(vi) To shift banking to List III.
(Entry 45, Para 3.9).

(vii) To shift futures markets to List II.
(Entry 48, Para 3.10).

(viii) To limit Centre's jurisdiction with respect to industries to those specified in the suggested Appendix A to List I.
(Entry 52, Para 3.11).

(ix) To shift wholesale marketing of petroleum products and LPG to List III and retail marketing of these to List II.
(Entry 53, Para 3.12).

(x) To limit Centre's jurisdiction with respect to minerals to those specified in the suggested Appendix B to List I.
(Entry 53, Para 3.13).

(xi) To limit Centre's jurisdiction with respect to labour and safety in mines and minerals specified in Appendix B of List I.
(Entry 55, Para 3.14).

(xii) "To prevent the Union Parliament to take over the regulation and development of inter-State Rivers and river-valleys ".
(Entry 56, Para 3.15).

(xiii) To shift certification of cinematographic films for exhibition to List II.
(Entry 60, Para 3.16).

(xiv) To limit the scope of Entry 62 to only such new institution as are financed by the Centre to the extent of at least 75 per cent.
(Entry 62, Para 3.17).

(xv) To prevent the Centre from setting up new Central Universities.
(Entry 63, Para 3.18).

(xvi) To shift to List II the Coordination and determination of standards in States' higher educational institutions.
(Entry 66, Para 3.20).

(xvii) To shift audit of State accounts to List II.
(Entry 76, Para 3.21).

(xviii) To shift excise duty on small industrial units to List II.
(Entry 84, Para 3.22).

(xix) To shift taxes on transactions in futures markets to List II.
(Entry 90, Para 3.24).

(xx) To shift residuary powers to List III.
(Entry 97, Para 3.25).

(2) *Changes in List III*

The suggested changes in List III seek to :

(i) shift appropriat subjects to List II;

(ii) delete unnecessary provisions; and

(iii) accommodate subjects shifted from List I.

Suggestions for shifting various matters to List II include the following :

(i) Preventive detention connected with security of a State or the maintenance of public order.
(Entry 3).

(ii) Family law.
(Entry 4).

(iii) Vagrancy, nomadic and migratory tribes.
(Entry 15).

(iv) Lunacy and mental deficiency; places for reception and treatment of lunatics and mental deficients.
(Entry 16).

(v) Prevention of cruelty to animals.
(Entry 17).

(vi) Forests.
(Entry 17-A).

(vii) Protection of Wild animals and birds.
(Entry 17-B).

(viii) Adulteration of foodstuffs and other goods.
(Entry 18).

(ix) Drugs and poisons.
(Entry 19).

(x) Population Control and family planning.
(Entry 20-A).

(xi) Trade unions, industrial and labour disputes.
(Entry 22).

(xii) Social security and social insurance; employment and unemployment.
(Entry 23).

(xiii) Welfare of labour.
(Entry 24).

(xiv) Education.
(Entry 25).

(xv) Charities and charitable institutions, charitable and religious endowments and religious institutions.
(Entry 28).

(xvi) Vital statistics.
(Entry 30).

(xvii) Minor ports.
(Entry 31).

(xviii) Shipping and navigation in internal waterways other than inter-State rivers.
(Entry 32).

(xix) Trade in and productions, supply and distribution of specified products.
(Entry 33).

(xx) Weights and measures except establishment of standards.
(Entry 33-A).

(xxi) Mechanised propelled vehicles including principles of taxes on these vehicles.
(Entry 35).

(xxii) Factories and boilers.
(Entry 36 & 37).

(xxiii) Low voltage transmission, distribution and captive power plants.

(Entry 39).

(xxiv) Archaeological sites and services.

(Entry 40).

(xxv) Acquisition and requisitioning of property for State purposes.

(Entry 42).

(xxvi) Enquiries and statistics for purposes of matters specified in List II.

(Entry 45).

A suggestion has been made for deletion of Entry 54 relating to removal of prisoners, accused persons and detainees from one State to another.

(Para 3.71).

The proposed additions to List III cover the following matters :

(i) Broadcasting and television.
(Entry 25-A, Para 3.72).

(ii) Displaced persons from other countries (besides Pakistan) and from other Indian States.
(Entry 27, Para 3.73).

(iii) Banking.
(Entry 32-A, Para 3.74).

(iv) Wholesale marketing of petroleum products and LPG.
(Entry 32-B, Para 3.75).

(v) Residuary powers.
(Entry 48, Para 3.76).

(3) *Changes in List II*

Changes in List II are those consequential to the changes in List I and III suggested above. The rationale of these changes is also given in the write-up relating to this List.

Constraints on States' Legislative Autonomy.

(Chapter 4).

The following constraints on the legislative autonomy of States within their spheres of legislative competence have been discussed and remedies for these have been suggested :—

(i) Inability of the State Legislative Assembly by itself to create or abolish the Legislative Council.
(Paras 4.2 & 4.18).

(ii) Governor's power to summon and prorogue the House(s) of State Legislature and to dissolve the Legislative Assembly.
(Paras 4.3 & 4.19).

(iii) Over-riding jurisdiction of the Union with regards to matters in the Concurrent List.
(Paras 4.4 & 4.19-A, 4.20 & 4.21).

(iv) Parliament's power to enlarge the legislative competence of the Union at the expense of the States' competence by making prescribed declarations.
(Paras 4.5 & 4.22).

(v) Enlargement of Legislative competence of the Union by Constitutional Amendments which Parliament is competent to enact by itself.
(Paras 4.6 & 4.7; 4.23 & 4.36).

(vi) Parliament's power to legislate with respect to matters in the State List.
(Paras 4.8 to 4.11; 4.24 & 4.25).

(vii) Governor's powers in relation to the Bills passed by the House(s) of State Legislature.
(Paras 4.12 to 4.14; 4.28 & 4.29).

(viii) President's powers in relation to the State bills reserved for his assent.
(Paras 4.15; 4.30 to 4.33).

(ix) The requirement in some cases of previous sanction of President for introduction of a Bill in the State Legislature.
(Paras 4.16; 4.34).

(x) Power of Parliament to provide for additional courts for better administration of laws made by Parliament.
(Paras 4.16-A; 4.35).

Role of the Governor

(Ch. 5).

The primary role of the Governor ought to be to function as the Constitutional head of the State.

(Paras 5.1 to 5.3).

As the Constitutional head, the Governor should play a completely non-partisan role but this has often not been the case in practice.

(Paras 5.4 & 5.5).

The allegations of partisan conduct usually pertain to; appointment of Chief Minister when no single party has a majority in the Legislative Assembly, verification of majority support, dismissal of Council of Ministers, dissolution of the Legislative Assembly, reservation of bills for President's assent, imposition of President's rule, conduct of State Administration under President's rule and appointment of Vice-Chancellors. Need for ensuring a non-partisan role by the Governor.

(Paras 5.6 & 5.7).

Suggestions towards securing a non-partisan role by the Governor :

(i) appropriate provisions for appointment and tenure of the Governor;
(Paras 5.8 to 5.14).

(ii) safeguards for State's autonomy and responsible Governments against misuse of discretionary powers by the Governor;
(Paras 5.14 to 5.19).

(iii) the procedure that may be laid down under Article 164 for appointment of Chief Minister;
(Paras 5.20 to 5.21).

(iv) no dismissal of Council of Ministers under Article 164 except when loss of majority support is actually established on the floor of the Legislative Assembly;
(Paras 5.22 to 5.23).

(v) application of the principles of natural justice to the dismissal of Council of Ministers under Article 356(1);
(Paras 5.24 to 5.27).

(vi) need to provide that the Governor's fortnightly report to the President shall be made available to the Chief Minister;
(Para 5.28).

(vii) importance of, and measures for, non-partisan conduct of State Administration under President's rule; and
(Para 5.29).

(viii) the need to carry along the State Government in the matter of appointment of Vice-Chancellors.
(Para 5.30).

The Administrative Issues
(Ch. 6).

The major administrative issues in Centre-State relations.
(Para 6.1).

Towards safeguarding States' autonomy within their specific sphere of responsibility, suggestions are made with respect to:

(i) imposition of President's rule in a State;
(Paras 6.2 to 6.22).

(ii) the All-India Services; deployment of the Union's armed, para military and police forces in the States; and
(Paras 6.23 to 6.27).
(Paras 6.28 to 6.32).

(iii) the activities of Central Government Agencies, namely:—
(Paras 6.33 to 6.35).

the Food Corporation of India,
(Paras 6.36 to 6.45).

the Bureau of Industrial Costs and Prices,
(Paras 6.46 to 6.47).

the Monopolies and Restrictive Trade Practices Commission,
(Paras 6.48 to 6.49).

the Director General of Technical Development.
(Para 6.50).

the Employees Provident Fund Organisation,
(Paras 6.51 to 6.52).

the Employees State Insurance Corporation,
(Para 6.53).

the National Savings Organisation,
(Paras 6.54 to 6.56).

the Central Water Commission and the Central Electricity Authority.
(Paras 6.57 to 6.58).

the Bhakra Beas Management Board, and
(Para 6.59).

the University Grants Commission.
(Paras 6.60 to 6.62).

Towards adequate institutional arrangements for Inter-State Coordination, the suggestions for establishment of the Inter-State Council and activation of the Zonal Councils.
(Paras 6.63 to 6.67).

Power of the Union to issue Directions to the States under Articles 256, 257, 339 and 350(A) is an avoidable irritant and needs to be omitted from the Constitution.
(Paras 6.68 to 6.70).

Financial Dependence of the States on the Centre
(Ch. 7).

States' heavy financial dependence on the Centre has increasingly undermined their role and status under the Constitution.
(Para 7.1).

States now finance about 45 per cent of their total revenue and capital expenditure by resource transfers from the Centre.
(Paras 7.2 to 7.4).

The States' dependence on resource transfers from the Centre is about 40 per cent with respect to their revenue expenditure.
(Paras 7.5 to 7.6).

Devolution under the recommendations of the Finance Commission accounts for about 60 per cent of the total resources transfer. The balance is accounted for by discretionary transfers including Central Assistance.
(Para 7.8).

In the case of Punjab, Devolution finances only about 11.7 per cent of its revenue expenditure as against 24 per cent for all the States.
(Paras 7.9 to 7.10).

States depend on the Centre for financing around 70 per cent of their capital expenditure.
(Paras 7.11 to 7.12).

All loans and advances from the Centre to the States are discretionary, including the loan portion of the Central Assistance for State Plan, States' dependence on the Centre for financing their capital outlay is near total.
(Paras 7.13 to 7.15).

Factors for Financial Dependence of States
(Ch. 8).

Factors for States financial dependence on the Centre include:

(i) growth of States' non-development and development expenditure inherent in their responsibilities under the Constitution;
(Paras 8.2 to 8.8).

(ii) States' narrow tax base and constraints on additional taxation (but not so much the commonly alleged relative inelasticity of their revenue from State Taxes);
(Paras 8.9 to 8.29).

(iii) low returns on State investments and enterprise; and
(Paras 8.30 to 8.40).

(iv) the Central Government's relentless drive to maximise its own capital receipts, *inter alia*, at the expense of the States.
(Paras 8.41 to 8.77).

Insufficient appreciation, even by the States, of the gravity and significance of their very low capital receipt in relation to the requirements inherent in the States' Constitutional responsibilities.
(Para 8.78).

Impact of States' Financial Dependence on the Centre
(Ch. 9).

The impact of States' financial dependence on the Centre includes the following major consequences :

(i) The diminishing share of States in total plan outlay and its undesirable consequences for the economy;
(Paras 9.3 to 9.6).

(ii) Centre's encroachment on the States' jurisdiction in the form of growing Central outlay on State subjects and proliferation of Central and Centrally sponsored Plan Schemes;
(Paras 9.7 to 9.30).

(iii) Centre's tight control over the Planning process in the States;
(Paras 9.31 to 9.38).

(iv) Imposition of an irrational structure and ill-conceived criteria of Central-State resources transfer including those for :—
(Paras 9.39 to 9.56).

(a) Devolution; and
(Paras 9.57 to 9.74).

(b) Central Assistance for State Plans.
(Paras 9.75 to 9.104).

(v) Growing political subordination of the States to the Centre.
(Paras 9.105 to 9.106).

Towards Balanced Centre-State Financial Relations
(Ch. 10).

Characteristics of an appropriate Centre-State Financial Balance.
(Para 10.1).

Measures for widening the States' tax basis :—

(i) additional sales tax in lieu of Union Excise Duties on petroleum products, processed vegetable oil, vanaspati, tyres, cement, glass sheets, iron and steel, motor vehicles and tractors;
(Paras 10.4 to 10.7)

(ii) reimposition of sales tax on sugar, textiles and tobacco;
(Para 10.8).

(iii) reimposition of tax on railway fares;
(Para 10.10).

(iv) imposition of a terminal tax on passenger arrivals by air; .
(Para 10.12).

(v) imposition of a tax on advertisements published in newspapers, broadcast on radio, and telecast on television;
(Para 10.13).

(vi) increase in the ceiling on tax on professions, trades, callings and employments; and
(Para 10.14).

(vii) restricted use of the power of Parliament to impose restrictions under Article 286(3) on sale or purchase taxes on goods.
(Para 10.15).

No indiscriminate enlargement of the Divisible Pool of Central taxes.
(Para 10.16).

Custom Duties may remain outside the Divisible Pool to fully take care of the Defence expenditure with a considerable margin to spare.
(Para 10.17).

Towards enlargement of the States' share of Central taxes, they may be allowed 50 per cent share in Income tax, Corporation Tax and Union Excise Duties. To prevent misuse of earmarked cesses, the yield of cess in excess of Rs. 10 crores may be treated as Union Excise Duty and form part of the Divisible Pool.
(Paras 10.18 to 10.21).

Two basic criteria for inter-State distribution of the Divisible Pool :

the compensation criterion and the redistribution criterion.
(Para 10.22).

The criteria suggested, as a balanced package of compensation and redistribution criteria :

(i) Population, 50 per cent;

(ii) per capita SDP below the all States' average 20 per cent;

(iii) the tax effort, 10 per cent;

(iv) Selected special problems, namely :
development of Scheduled Castes, 4 per cent;

development of Scheduled Tribes, 2.5 per cent;

development of hill and remote areas, 3 per cent;

development of border areas, 2.5 per cent;

co-ordinated development of the North-East, 2.5 per cent;

housing for landless workers, 3 per cent; and improvement of urban slums, 2.5 per cent.
(Paras 10.22 to 10.31).

Measures for ensuring the States a due share in capital receipts :

(i) equal share in market borrowings; allocation of States' share of market borrowings on the compensation criteria;

(Para 10.36).

(ii) increase in States' share in Small Savings to 80 per cent for the higher income and 95 per cent for the lower income States, and increase in the maturity period of Small Savings loans from the Centre to 50 years with a grace period of 10 years;

(Para 10.37).

(iii) additional small savings loans to States equal to 50 per cent of the increase in non-Government Provident Funds' and others' special deposits with the Central Government;

(Para 10.38).

(iv) States' share in net collections under Public Provident Fund and National Deposits Scheme;

(Para 10.39).

(v) encouragement to State enterprises to go in for bond issues;

(Para 10.40).

(vi) finance of State irrigation and power projects under external aid;

(Para 10.41).

(vii) treatment of State enterprises at par with Central enterprises in the matter of external commercial borrowing;

(Para 10.42).

(viii) States' share in the amount raised by deficit financing;

(Paras 10.43 to 10.44).

(ix) States' share in special deposits of the surplus funds of oil and other Central undertakings;

(Para 10.45).

(x) Expanding utilisation of institutional credit for financing State enterprises; and

(Paras 10.46 to 10.48).

(xi) adequate debt relief.

(Para 10.49).

Modification of the loan-grant ratio of Central Assistance to 50 : 50.

(Para 10.50).

Implications of the resources transfer package :

(i) need to evolve a balanced package out of the above measures after examining their quantitative implications and actual experience of operation of these measures;

need eventually for a legal or Constitutional basis for this package; and

(Para 10.51).

(ii) reduced role of Devolution and Central Assistance in resources transfer;

these transfers may also be distributed among the States more or less on the same criteria as suggested for inter-State distribution of the States' share in the Divisible Pool.

(Para 10.52).

Lack of substance in the view that for greater inter-State equality, the Centre needs to be in command of vast resources, a substantial proportion of which may be used by it at its discretion.

(Paras 10.53 to 10.63).

The irrationality of the widely held belief in the inherent fairness of per capita equality of development or investment outlays. To narrow the gap with the higher income States, what the lower income States need to have is an equal or even a higher ratio of their development outlay to SDP.

(Paras 10.64 to 10.68).

States and the Planning Process

(Ch. 11).

The Planning Organisation and procedures must accord with the envisaged role and content of planning in economic and social development of the country. These must be conditioned by:

(i) the particular institutional context of planning;

(ii) the accepted development goals; and

(iii) the chosen pattern of development.

(Para 11.1).

(1) *The planning Context :*

The main elements of the institutional context are :

(i) a large private sector;

(ii) an extensive unorganized sector; and

(iii) a quasi-federal state structure.

(Paras 11.2 to 11.7).

(2) *The Development Goals :*

Planning must derive its orientation from the country's accepted development goals. These are :

(i) growth with social justice;

(ii) economic self-reliance;

(iii) economic stability; and

(iv) consolidation of the democratic framework.

Growth with social justice implies;

(a) putting through the inevitable structural change at a minimum cost, and

(Paras 11.8 to 11.17).

(b) efficiency of resource use.

(3) *The Pattern of Development :*

The country has been pursuing all along a capitalist pattern of development.

(Paras 11.18 to 11.20).

(4) *The Role of Planning :*

The accepted development goals cannot be achieved together in a development process which

relies on free play of market forces. Even in an essentially capitalist pattern of development, planning of the appropriate kind is very much needed.

(Para 11.21).

(5) *The Content of Planning*:

In the prevailing context, the planning process has to seek the realisation of the accepted national objectives by promoting the creation of as dynamic, self-reliant, stable and human an economy as may be possible under the capitalist pattern of development. The context, organisation, techniques and policy framework of Indian Planning must be suited to this task.

(Para 11.22).

The Planning in India must be an appropriate combination of mandatory and indicative planning.

(Para 11.23).

The perspective of a growing coverage of the economy by indicative (rather than mandatory) planning underlines the importance of an appropriate policy-framework for efficient conduct of such planning.

(Para 11.24).

Decision making with respect to the policy issues is today the weakest aspect of the planning process in the country.

(Paras 11.25 to 11.27).

(6) *The time Horizons of Planning*:

The long-term perspective may be preferably worked out in a 10-Year time horizon. The medium-term and short-term planning may continue to have as at present a five-year and one-year time horizon.

(Para 11.28).

The 10-Year perspective may have no mandatory part. It may give a scientific projection of the country's demand and production structure, a financial perspective to match the physical perspective, the implied institutional change and innovation, and the envisaged policy framework.

(Para 11.29).

The planning of the 10-year perspective may be undertaken concurrently with the mid-term review of the Five Year Plan.

(Para 11.30).

The Five Year Plan may include a proper review of development during the previous 5-year period, a projection of the demand and production structure 5 years hence, a realistic scheme for financing the rupee finance and foreign exchange requirements of the Plan, the envisaged changes in the policy framework of new policy initiatives, and the contemplated changes in the policy framework. The Five Year Plan period and the reference period of the Finance Commission must be made co-extensive. The Plan may have a mandatory and an indicative part and both must be adequately spelt out.

(Paras 11.31 to 11.34).

The Annual Plan is the operational instrument of the Five Year Plan and must have the same scope and content.

(Para 11.35).

(7) *The Levels of Planning*:

Corresponding to the two levels of Government, there must be two basic planning levels, the Centre and the States. The State level includes the District and lower levels.

(Para 11.36).

The Central Sector Plan may comprise the development activities of the Union Ministries and the Central Departmental and non-Departmental enterprises. Centres outlay on Central and Centrally Sponsored Plan Schemes must be cut down to the minimum with equivalent transfer of resources to the States.

(Para 11.37).

The Public Sector Outlay at a given planning level must include the Plan Outlay financed by Budgetary resources and by extra-budgetary resources of the public enterprises but must exclude the assistance to a lower planning level for financing the latter's Plan. The State Plans do not strictly observe these rules.

(Paras 11.38 to 11.41).

There is as yet little genuine district or lower level planning in any State. Essential pre-requisites for this do not exist yet.

(Paras 11.42 and 11.43).

District and lower level planning in the States.

(Para 11.44).

(8) *The Planning Organisation*:

The Planning Organisation consists of multi-level structure; National Development Council at the apex; the Planning Commission at the Centre; the Planning Department and the Planning Boards/Commissions in the States; and the Planning Boards/Commissions at the District and lower levels.

(Para 11.45).

The National Development Council is a non-statutory body set up by the Centre. It has a symbolic rather than a substantive role in planning.

(Paras 11.46 to 11.49).

The Planning Commission is a non-statutory body created by the Central Government. The States have no say in determining its composition, functions and the staffing pattern.

(Para 11.50).

The Union Ministries have become increasingly autonomous of the Planning Commission. With respect to the preparation of State Plans the Commission remains an effective control and supervisory agency of the Central Government.

(Para 11.51).

Excessive secrecy shrouding the Planning Commission's technical work results in slowing down improvements in planning concepts and techniques.

(Para 11.52).

At the State level whatever planning is being undertaken is by the Planning and other Departments. The State Planning Boards/Commissions

exist in name rather than as an effective planning agency. One reason for this is that the Planning Commission dominates the planning process in the States and leaves little initiative to them. There are also other weighty factors for this.

(Para 11.53).

The Centrally Sponsored Scheme for strengthening the State Planning machinery has not been much of a success. The Centre may well leave this task to the States themselves.

(Para 11.54).

The ineffectiveness of Planning Boards as a planning agency has had several undesirable consequences for State level planning.

(Para 11.55).

(9) *Monitoring and Evaluation :*

Monitoring is essentially an aspect of implementation and is necessary for speedy and effective corrective action for any lapses in implementation. Inefficient implementation of public sector projects and programmes suggests unsatisfactory monitoring.

(Para 11.56).

Monitoring is of importance to Planning agencies for (i) avoiding development of serious imbalances in the economy and (ii) securing realistic anticipations of the base year position in various sectors towards preparation of the next Plan. They are normally provided with the needed information by the implementation agencies.

(Para 11.57).

Ex-ante appraisal of projects is an aspect of the Planning Process and may be entrusted to the Divisions dealing with different sectors. Economic Division may provide training in basic appraisal criteria and techniques to these Divisions.

(Para 11.58).

The utility of ex-ante evaluation depends on how far projects and programmes are approved on objective criteria.

(Para 11.59).

There are specialised agencies for ex-post evaluation both at the Centre and in the States, but these are ineffective.

(Para 11.60).

There is some chance of securing more adequate, uninhibited and timely evaluation reports on Plan projects and programmes if the task is framed out to a reputable research institution.

(Para 11.61).

(10) *Reorganisation of the Planning Process :*

The planning process needs to be reorganised to ensure that the State level planning is duly autonomous and the States have equal opportunity with the Centre for determining national priorities and basic directions of development.

(Para 11.62).

Reorganisation of the National Development Council (NDC) as the effective apex planning organisation.

(Para 11.63).

Creation of National Development Organisation (NDO) as a common Centre-State specialised planning institution to serve as the permanent secretariat to the NDO and to coordinate the Central Sector and State Sector Plans.

(Para 11.64).

Reorganisation of the Planning Commission as the specialised planning agency exclusively for the Central sector.

(Paras 11.65 to 11.67).

Reorganisation of the State Planning Boards as a specialised planning agency for the State sector.

(Paras 11.68 to 11.72).

Reorganisation of District and lower level planning agencies.

(Paras 11.73 to 11.76).

The above changes in the Planning organisation at different levels are meant to promote cooperative federalism and democratic decentralisation.

(Para 11.77).

ALL INDIA TRIBES AND MINORITIES FEDERATION

Memorandum seeking autonomous status within the Constitutional frame-work for the areas/States predominantly inhabited by Tribal and minority communities

In any Democratic set-up of Government, ordinarily, the rule dominance of majority prevails upon almost in every walk of life ranging from individual to social, economic, religious, cultural freedom and ethenic identity. The racial, religious and linguistic diversification have no doubt, enriched our culture and added to its beauty multiple colours, but at the same time have posed threat to its distinctive identity and even existence, particularly of minorities and tribals.

The framers of Constitution, in this back-drops, have provided some special provisions for the protection of minorities and tribals so that they may develop and progress without destroying their social fabric and identity but inspite of constitutional safeguards, the under current discontentment and dissatisfaction are browing amongst them surfacing insurgency and insurrection.

The excessive centralization and unitary character have almost destroyed the Federal feature of our Constitution, the process has given rise to the feeling of insecurity amongst the minorities and tribals.

The Constitutional provisions for their protection provided forty years back, with the process of time and advancement in their way of life, are being felt insufficient and inadequate. With a view to meet their aspirations and in the interest of national solidarity All India Tribes & Minorities Federation submit their demand as under :—

1. The areas which are backward and compact and predominantly inhabited by Tribals be declared Autonomous Region/Districts within the cosntitutional provision Article 244(2) throughout the country so that uniform policy towards tribals be adopted any may not be only for some Districts/areas in Northern Eastern States, Assam, Tripura and Mizoram. Some of these areas are Jharkhand in Bihar, Madhu Ben in Orissa, Baster Areas in Madhya Pradesh and Kinnaur and Lahaul Spiti Districts in Himachal Pradesh etc. This will remove the feelings and apprehensions of disparity and partiality amongst the tribals throughout the country.
2. Likewise there are some areas/States predominently inhabited by minority communities like Punjab, and J & K and by one minority community i.e. Gorkhas in Hill Districts of Darjeeling of West Bengal which are reverbrating and echoing with the slogans of autonomy with a view to maintaining their identity including their religion, culture and social life. These areas/states may be granted autonomous status within the four cornors of Constitution and for this purpose suitable amendment of the relevant articles of the Constitution may be made without further loss of time so that the matter may not get complicated and out of hand also foreign hands be kept off.
3. Article 370 of the Constitution under "Instrument of Accession" give sufficient autonomy to J & K State. This Article may be amended in such a way that its amended form be applicable to Punjab, and other such states areas predominantly inhabited by minority communities that it may not signify J & K only and the J & K should not enjoy this exclusive privilege.
4. All subjects under concurrent list be divided between the states and the centre. There should not be any concurrent list under fifth Schedule of the Constitution.
5. The States should be given sufficient powers to deal with administrative measure concerning All India Services, and Financial powers too. Article 245 to Article 251 for this purpose may be amended accordingly. The residuary power may also be specified for the state and the centre.

The above demand may kindly be considered in the larger interest of the nation so that the unabated communal conflicts, agitations, and discontentment among the minorities, tribals and states may be eliminated for ever.
